3-Bedroom	0	0	0	0	0
4-Bedroom	0	0	0	0	0
Total	24	0	0	0	24

Additional Information:

Please attach to this application the documentation addressing the following additional information:

1. Summary

Briefly summarize the request, including property description, proposed use of funds (and # of units involved).

With heartfelt gratitude to the County of Marin for your vital and ongoing partnership, Homeward Bound respectfully submits this proposal for $500,000 in funds to develop veteran housing on the 2.8-acre "HUD Parcel" site in the former Hamilton Army Airfield in Novato. The veteran housing project will provide 24 one-bedroom units of permanent supportive housing (PSH) on two floors. The veteran housing is the first phase of a larger project on the site that will include 26 one-bedroom units of workforce affordable housing and a job training facility.

Our vision for the veteran housing is that the 24 units will end veteran homeless in Marin, in conjunction with HUD-VASH, and the VA per diem transitional beds already located at our adjacent New Beginnings Center. Development of these critically needed PSH units for veterans will make Marin one of the first California counties to bring an end to veteran homelessness.

Artist rendering of the future veteran housing

2. Background/ Applicant History

2.1 <u>Property History</u>. Please provide the property's history leading up to this request. Include when the sponsor acquired/will acquire the property, any previous requests for County funding, attempts to secure other financing, etc.

As mentioned above, the site is part of the former Hamilton Army Airfield, which was closed by the military in 1975. Under the Hamilton Reuse Plan, the base was turned over to the City of Novato and is now a planned community with a broad array of residential, commercial, open space, and civic uses.

As a decommissioned military base, HUD approved the Hamilton Reuse Plan for this site under the McKinney Act, which included a Legally Binding Agreement that the HUD Parcel be designated for homeless service uses, including housing, services, supportive employment, and job training.

The HUD Parcel is now occupied by three dilapidated structures built prior to 1952 by the military for use as barracks. Currently, the City of Novato is using the buildings for auto impounding, police storage, and theatre costume and props storage. These old buildings will be demolished to make way for the new veteran housing, workforce housing, and job-training facility.

While the vision for this project has long existed, work began in earnest in 2018, when Homeward Bound asked the City for a ground lease for the site and engaged with Fredric C. Divine Associates, a local firm Homeward Bound has successfully worked with before, to develop an architectural plans. Since then, key milestones that have been reached include:

- 2018 – 2020 – Homeward Bound held public neighborhood meetings to gain community input on the initial project design and made revisions according to the input
- 2019 – 2020 – Homeward Bound submitted an application for design review, participated in a design review process, and made revisions according to the input
- December 2019 – the Novato City Council approved a 55-year $1 ground lease of the HUD parcel to Homeward Bound.
- January 2020 – the Novato Design Review Commission moved to forward to the Planning Commission a recommendation of approval of exterior design and landscape plans for the site
- June 2020 – the Novato City Council voted to grant the project in lieu housing funds of $750,000 in to off-set development fees
- 2020 – 2021 – Homeward Bound has secured considerable funds toward completing the project, including: $4 million from the State of California 2021 Budget, $3 million from the State Veteran Housing and Homelessness Prevention (VHHP) program, $2 million from Marin Community Foundation (MCF) plus $100,000 for predevelopment, $2 million County commitment (to be met with locally controlled sources, e.g., the Housing Trust, HHAP, CDBG, or HOME), and $100,000 from Tamalpais Pacific.

Homeward Bound staff have engaged, briefed, and worked with County of Marin staff and Supervisors and City of Novato staff and City Council Members at each stage of the process, and we are very grateful for the help, support, and encouragement we have received all along. We look forward to completing fundraising, achieving full approval of our plans and a building permit, and building and operating the veteran housing.

2.2 <u>Applicant Profile</u>. Please provide a profile of the applicant (and of the co-applicant, if applicable). Include a description of the organization, including its mission, how long it has been in existence, experience of staff, and characteristics of its Board of Directors. Describe any recent expansion or cutbacks in activities and/or budget, and the organization's standing with licensing or other "accreditation" authorities, if applicable.

Homeward Bound's mission of "opening doors to safety, dignity, hope and independence" is underscored by a vision that "everyone needs a place to call home."

Now in our 45th year, Homeward Bound has grown to become the main provider of emergency shelter and supportive housing for people experiencing homelessness in Marin, including working families, veterans, domestic violence survivors, and chronically homeless individuals with incarceration histories, mental health issues, or substance dependence challenges. With 18 residential programs, Homeward Bound serves over 1,100 people annually. We provide tailored counseling plus an array of social and employment services, helping people become housed, self-sufficient, and able to lead fulfilling lives.

Homeward Bound's programs and activities have grown steadily over the years in response to the demand for homeless housing and services, and our annual agency budget, now $10.9 million, has kept pace. The workforce has also grown each year so that we now employ a highly diverse, experienced, and skilled group of more than 60 persons (including numerous persons with experience of homelessness), engaged in program activities, supportive services, housing assistance, shelter and

housing operations, employment training, social enterprises, and the many other activities required to operate a thriving nonprofit organization.

A key reason for our success has been the sustained and consistent leadership of a highly committed and engaged Board of Directors, composed of 14 men and women, including persons with lived experience, encompassing varied passions, perspectives, and skill. The agency's five-person management team brings more than 80 years of relevant experience and proven track record of collaboration and success. This team includes an Executive Director, Deputy Director, Director of Housing and Operations, Director of Supportive Services, and Director of Finance.

Over the years, Homeward Bound has successfully completed several major developments comparable this project. In 2018 we opened King Street Senior Housing in Larkspur. The project took less than a year to realize and cost $1.3 million in renovations, transforming a vacant convent into a welcoming and permanent group home for 12 seniors exiting homelessness. In 2016, we celebrated the opening of Oma Village. Built with significant grant support from throughout Marin, this Novato housing community provides 14 affordable homes for families transitioning from homelessness. With $6.6 million in total construction costs and taking several years to complete, Oma Village is now a thriving home for 18 adults and 23 children. Finally, in 2008 we were thrilled to open the doors of the New Beginnings Center, which cost $9.3 million for construction and related costs, and is now home to 25 adults and 4 small families in studio apartments, a 6-bed medical respite program, our Fresh Starts Culinary Academy/Key Room job training and events center, and Homeward Bound's agency headquarters.

2.3 Project Manager. Describe staff assigned to the proposed property, their experience with acquiring/owning/rehabilitating similar sites, their current availability, and what percentage of time they expect to work on the subject project. Indicate similar projects each staff member has successfully completed.

Homeward Bound is self-developing this project. The agency has demonstrated its capacity for this role by having successfully developed the Oma Village, Next Key Center, and New Beginnings Center projects. Deputy Executive Director Paul Fordham will be the lead project manager for veteran housing (and later project phases), a role he fulfilled for the Oma Village and Next Key Center efforts. As such, Paul will interface with all key players, including Novato planning officials and the design and construction teams. An estimated 20% of his time will be committed to the Veteran and Workforce Housing development process. Executive Director Mary Kay Sweeney provides leadership, vision, design guidance, and public engagement and communications. An estimate 15% of her time will be committed to the project. Finance Director Bob Heinen will be the financial lead, responsible for the project budget, sources and uses, operating budget, and cash flow analysis. Around 5% of his time will be committed to the project.

As mentioned above, Fredric C. Divine Associates has been retained for architectural services, a role the firm very successfully carried out for most of the above-referenced development projects (with the exception of Oma Village). Homeward Bound's Board, leadership, and development team (including consultant Tony Gardner) are all working together on fundraising and have demonstrated past success with the Oma Village and Next Key Center capital campaigns.

2.4 Property Manager. Please provide the name of the property management company that will be hired to manage the property (if applicable). Include the number of buildings and number of units the company currently manages that are affordable housing sites.

Likewise, Homeward Bound will self-manage the property as we do all our shelter and housing, totaling 18 distinct programs, 397 units of supportive housing, and 553 combined beds of emergency shelter and supportive housing. There will be no outside property management firm. Homeward Bound is proud of the quality of our maintenance of the buildings and grounds we have managed throughout Marin County for the past 40-plus years. The overall responsibility for the maintenance required to both protect the investment in the project and assure continued attractiveness belongs to the Executive Director and Director of Housing and Operations. The Executive Director and Director of Housing and Operations directly supervise the Facilities Manager, and the Facilities Manager supervises a team of 5 maintenance staff that will support this facility's maintenance, repair and prevention efforts.

THE Property Management Plan will be available upon request with further details on:

- Personnel policy and staffing
- Maintenance, repair, and safety
- Marketing and occupancy (including affirmative marketing)
- Resident relations and community relations.

3. Site

3.1 Site Control. Please describe the type of site control that the applicant has for the proposed property and submit documentation in accordance with the Application Checklist. If this request includes funds for acquisition, summarize the acquisition terms, price, contingencies, conditions and deadlines. When available, please submit a copy of an appraisal of the property and of a Board Resolution that authorizes your organization to acquire the site.

As mentioned above, Homeward Bound has a 55-year, $1 ground lease (attached) from the City of Novato, approved by the City Council on December 19, 2019 and entered into as of January 27, 2020.

3.2 Unusual Characteristics. Please describe any unusual characteristics of the site (e.g. slope, rock formations, etc.) and any easements or encroachments granted to or caused by adjacent parcels and improvements.

The property consists of an irregular triangle-shaped parcel of land. There is minimal sloping and no unusual formations. There are no current easements, although the ground lease allows the City to make easements to facilitate shared drainage among the neighboring parcels that include the HUD parcel, the parcels with Homeward Bound's existing campus to the north, and the parcels with the Novato Village Senior Apartment Homes and Ascend at Hamilton Field to the south. Homeward Bound is fully supportive of any steps that may be needed to ensure proper shared drainage for each of the sites.

3.3 Existing developments. Building Inspection Report. Please describe any significant findings of building inspection reports and submit copies of any building inspection reports and surveys/analyses of any building systems, in accordance with the Application Checklist.

N/A

3.4 Adjacent Uses. Indicate land uses of other parcels within the immediate vicinity of the project.

The property is located in an area of the former airfield consisting now predominantly of commercial and residential land uses. The immediate vicinity of the property can be described as: a parking area for Homeward Bound's housing-service-administrative campus to the north; SMART Train railroad tracks

followed by a drainage canal and Hamilton Parkway to the east; Novato Village Senior Apartment Homes to the south, the in-development Ascend at Hamilton Field to the south; and undeveloped land followed by Nave Drive and Highway 101 to the west.

3.5 Neighborhood Amenities. Describe any nearby amenities, such as parks, public transportation, grocery stores, health care facilities, schools, childcare, libraries, parks/open space, etc., that residents of the project are/would be able to use.

A key benefit of the project is that it is adjacent to Homeward Bound's main campus, where many services and veteran resources are already provided onsite. For example, a full-time Housing Focused Case Manager works exclusively with veterans staying at the New Beginnings Center (NBC). The HUD VASH program has a caseworker office in the NBC. Ritter Center, AA, and NA all provide substance abuse recovery services or groups on site. The Fresh Starts Culinary Academy and other training opportunities are located on campus, and the NBC cafeteria provides three free meals per day. As such, the project will be part of what is truly a center for veteran services, and veteran tenants of the project will be able to timely and easily obtain needed services.

The site is served by the nearby Hamilton Smart Train station, as well as 3 different transit lines within .3 miles (the 49, 251, and 257). And Homeward Bound provides bus vouchers. In addition, there are:

- One grocery stores within .5 miles - Safeway and another within 1 mile - Nugget Market
- One shopping center within .5 miles – Hamilton Marketplace and another within 1 mile – Pacheco Plaza
- Three parks within 1 mile – Clark Blasdel Community Park, Bay Trail/Hamilton Wetland Preserve, and Loma Verde Preserve
- Two medical clinics within .5 miles – Sutter Health Walk-In and Action Health Clinic
- Four public recreation facilities within 1 mile – South Novato Library, Hamilton Community Pool, Hamilton Field History Museum, and Marin Museum of Contemporary Art.

3.6 Environmental Issues/Site Suitability. Please explain the relevant environmental issues of the proposed project. Include any of the following items that are known.

- ☐ Flood Zone **N/A**
- ☒ Phase I/II Site Assessment Results
- ☐ Potential Hazards **N/A**
- ☐ Environmentally sensitive area or species **N/A**
- ☐ Cultural resources **N/A**

If applicable and when available, submit a copy of the Phase I and Phase II Environmental Site Assessments.

Please see attached Phase 1 Environmental Assessment.

3.7 State/Federal Environmental. Please describe how you plan to comply with state and federal requirements for environmental reviews, if any, including Section 106 review for historic preservation.

City of Novato Community Development Director Vicki Parker has indicated that staff have reviewed the above-referenced Phase 1 Environmental Assessment and will recommend the project be exempt from CEQA, including section 106, pursuant to CEQA Guidelines Section 15332, In-Fill Development Projects. But if not exempted, Homeward Bound will carry out any mitigation steps required.

Federal NEPA review is not required because there are no federal actions that need to be processed.

4. Development/ Rehabilitation Plan

4.1 <u>Proposed New Construction</u>. Entitlements. For new construction, please describe in detail the permits that will be required, for example Design Review, Master Plan, Zone Change, General Plan Change, Coastal Permits, etc.

The project is now well on its way toward achieving all needed approvals and entitlements.

No zoning changes are needed since the project is an allowable use under the existing Planned District (PD) designation.

No general plan changes are required since on November 19, 2019, the Planning Commission determined that the ground lease and the proposed uses are fully consistent with the Novato General Plan under the existing Community Facilities (CF) general plan designation.

The project is subject to design review. As mentioned earlier, Homeward Bound submitted a complete application for design review and has successfully engaged with Novato Design Review Commission, Novato Planning Commission, City staff, and the public in the design review and approvals process. As a result, on January 15, 2020, Design Review Commission moved to forward to the Planning Commission a recommendation of approval of exterior design and landscape plans for the site.

Also, the project is subject to a Precise Development Plan as required for all projects in a PD zone. The project will move to this phase once the above environmental review process is complete. Thereafter, Homeward Bound will submit the Precise Development Plan application and engage in the detailed design review, Planning Commission, and City Council review and approval process.

Finally, the project will need a building permit as required for virtually all construction projects. Once all needed approvals are secured, the project will submit a building permit application and work with County staff on all steps needed to pull the building permit.

4.2 <u>Proposed New Construction- Local Planning contact</u>. Please describe any contact with the local planning staff and any specific feedback provided.

Homeward Bound is grateful to have worked closely on the design review, entitlement, environmental review, and ground lease process with City Manager Adam McGill, Community and Economic Planning Director Vicki Parker, Planning Manager Steve Marshall, Senior Planner Hans Grunt, and Planner II Vivek Damodaran. City staff have been true partners on the project; have provided clear and comprehensive information, feedback, and explanations on the planning requirements that must be met and project information needed; and have coached and guided us through the ground lease, design review, and entitlement approval process at the Design Review Commission, Planning Commission and City Council levels. Without the strong support of and collaboration with planning staff, the project would not be as far along as it is.

Some of the key feedback to date has had to do with the ground lease terms and the exterior design and landscape features of the site. Based on this feedback, Homeward Bound agreed to include the shared

drainage easement language in the lease, and twice revised the project plan documents to meet Design Review Commission and staff comments regarding exterior appearance and landscaping.

4.3 <u>Proposed New Construction Population to be served</u>. Describe the type of housing, family, senior, individuals with disabilities, etc.

The project will be composed of a well-designed, two-story apartment building with 24 total one-bedroom units (12 on each floor), and a staff office on the first floor. Site-based apartment housing with 8-hour-a-day, 5-days-a-week on-site case management and intensive services is a model that is currently lacking in Marin but is critically needed to meet the needs of highly vulnerable veterans experiencing homelessness.

All prospective veteran tenants will be assessed and referred through the Marin Coordinated Entry System (CES). CES uses the VI-SPDAT to assess persons for housing based on vulnerability score. Those who score 10 or more are placed in the dynamic PSH Community Queue in HMIS. The CES provider runs updated HMIS Community Queues every two weeks including for the BY-NAME VETERANS LIST. Persons at the top of the veteran by-name list are selected for a Housing Case Conference subgroup of agencies, including Homeward Bound, that regularly serve veterans. This group will make housing placement recommendation among units available.

In addition, eligibility criteria that must be met are as follows:

- Veteran as defined by relevant federal and state program requirements
- Homeless, chronically homeless, or at risk of chronic homelessness, although in practice we expect that most if not all will have experience of chronic homelessness
- Very low income (not more than 50% of area median income [AMI]) and for some non-VASH units must be extremely low incomes (not more than 30% of AMI)
- 2-3 units will likely be set aside for veterans who do not qualify for VA provided health services due to their discharge status (a very hard population to house).

This project will follow Housing First policies. Services will be provided unconditionally and use of services will not be a condition of the program. Rather, supportive services will be encouraged, and will be responsive to individual needs. Homeward Bound leverages community resources to connect persons to veteran services, mental health services, substance abuse services, employment assistance, mainstream benefits, volunteer opportunities, and other support as needed to help them stabilize in their housing.

As with other Homeward Bound PSH programs that follow Housing First, there will be no rules or barriers relating to sobriety, good behavior, or justice system involvement; rather the approach will be to support the clients where they are at and support their progress within the framework of stable housing.

4.4 <u>Proposed Rehabilitation or Acquisition Scope</u>. Describe the scope of the rehabilitation that is proposed for the property and how it will address specific conditions, i.e. replacement needs, deferred maintenance, existing building violations, required seismic upgrades, building or health codes problems. Please describe any other existing rehabilitation needs that are not included in the proposed scope of work and explain their exclusion.

N/A

Explain how the rehabilitation will be staged to minimize risk and inconvenience to the residents. If certain systems or parts of residents' units will be temporarily or unusable (e.g. kitchen or bathroom) during construction, state the estimated duration of such interruptions and what mitigations will be provided.

N/A

If applicable, submit a capital needs assessment and any corresponding architectural drawings, in accordance with the Application Checklist.

N/A

4.5 <u>Proposed Rehabilitation or Acquisition Population to Be Served</u>. Describe the demographics of the current tenants in the building.

N/A

4.6 <u>Relocation</u>. If applicable, describe in detail any temporary relocation of existing tenants at the site that will be necessitated by the proposed rehab scope. Include an explanation of the need for relocation, estimated duration, number of tenants that will be impacted, and which laws (local, state, federal) must be followed in carrying out the relocation.

N/A

4.7 <u>Accessibility</u>. Please identify all applicable laws and the specific accessibility requirements that must be met in the design of the proposed project. If existing, please describe the accessibility of the building and the extent to which that accessibility will be upgraded.

Applicable accessibility laws include the federal Fair Housing Act, federal Americans with Disabilities Act and Section 504, California Accessibility Act, and California Building Code accessibility standards. Accessibility features for the project include:

- Eight disabled access parking spots
- All walkways, entrances, doorways, doors/hardware, ramps, drinking fountains, rails, stairways/landings, and appropriate signage (including raised braille) will meet accessibility standards
- All ground-floor units will be fully accessible.

In addition, all residents will be provided with a reasonable accommodation form when requesting additional support for disability related matters. Homeward Bound has a Section 504 Officer who reviews all requests and responds to the resident within the allotted timeline. Applicants are made aware of Homeward Bound's Notice of Rights to a Reasonable Accommodation during the intake process and when signing their lease. The notice informs each client that at any stage in the housing process they may request a reasonable accommodation. The agency's 504 Coordinator conducts an interagency Reasonable Accommodation training once a year and requires all housing staff to attend Fair Housing Advocates of Northern California's Legal Obligations and Rights of Housing Providers Under Federal and State Fair Housing Law for Applicants and Tenants with Disabilities Training.

4.8 Community Support. Describe community engagement activities that have taken place and future plans that will take place.

As part of the homeless facilities component of the Hamilton Reuse Plan, Homeward Bound's facilities at Hamilton Airfield have undergone an extensive public process with many meetings (going back to the mid-1990s), during which neighbors and the public have had ample opportunity to comment on and influence building and program design. As a result, Homeward Bound has successfully engendered very broad community support for its activities at the former Hamilton Airfield, and the homeless services "campus," is fully aligned with the community, social, economic, and aesthetic goals set forth in the City's General Plan and Hamilton Reuse Plan.

With the design review process well underway, the community has already been fully engaged around the new veteran housing being added to the campus. Thus, on April 25, 2018, Homeward Bound held a community outreach kick-off meeting with our Hamilton neighbors, three City Council members, two staff from Senator McGuire's office, VA staff, and County staff. Then, on November 19, 2019, Homeward Bound held a neighborhood meeting at the Next Key Center to surface neighbors questions, concerns, and comments. These meetings showed strong community and neighborhood support for the project, and all comments were considered in preparing and revising the project plans.

Adding veteran housing to the Hamilton campus is a great way to achieve more affordable housing, especially given the high cost of real estate in the county and the challenges faced in engendering community acceptance in many area and neighborhoods. The veteran housing project faces neither of these challenges because Homeward Bound already has a no-cost lease to the property, which eliminates the expense of purchasing of a new site or a costly commercial lease. Moreover, the agency has worked hard to develop excellent relationships with the Hamilton neighbors during the 30+ years we have been operating shelter and housing with supportive services at the former Hamilton Airfield.

Integration of the target veteran population with the broader community will be a key goal of all project partners. Through its "good neighbor" policy, Homeward Bound will create opportunities for tenants and neighbors to meet and interact as neighbors around common interests and concerns. Homeward Bound will address any neighbor complaints within 10 days. The site will be robustly staffed to handle issues whenever they arise and staff will work closely neighbors to quickly resolve any issues.

Homeward Bound intends to have a veteran tenant council that will be led by the veterans themselves and will meet monthly. The goal will be to create a space for veterans to connect, share resources and experiences, and encourage strong community among veterans as they had in the military. The veterans council will select its own officers, will plan outings and activities, will hold "tenant circles" to discuss chores, neighbor relations, address conflicts, and build relations with staff; and will engage in volunteer and learning activities together. Veterans will also be invited to our veterans group currently held by our VA GPD program. We intend also to engage the County Veteran Services Officer (an Afghanistan War Veteran) and a VA peer specialist to hold activities and workshops as a further way to build Veteran spirit and involvement.

5. Financing Plan (Sources and Uses)

5.1 Existing Financing. In the chart below, list any financing (loans and grants) previously received from all public and private sources for this building.

N/A

5.2 <u>Proposed Financing</u>. Sources & Uses Table. Please provide proposed sources and uses of funds for the project. Include both committed and anticipated sources. Provide a complete Sources and Uses Table for acquisition and for permanent sources. Provide an anticipated per unit subsidy.

Please see the Sources and Uses Table attached. The total development cost for the project is $11,950,000. Per unit this is $497,917.

5.3 <u>Proposed Sources Narrative</u>. For the sources shown in item 5.2, Sources & Uses Table, please indicate:

- **The status of all proposed funding sources as of the date of this application**
- **The timing and likelihood for obtaining commitments of anticipated funding sources**
- **The alternatives that will be pursued in the event that any funding sources are not obtained or are committed at lower levels than requested**

Most of the $11,950,000 needed has already been awarded as shown in the Sources and Uses budget and supporting commitment documentation.

We were very excited on February 10, 2020 to receive the County's preliminary funding commitment of $2,000,000 to the project. An award of $500,000 in Housing Trust Funds combined with the $526,526 in County-controlled HOME funds will more than half fulfill this County preliminary commitment. We look forward to working with County staff toward identifying sources to fill the remaining gap of $973,474. Here we have requested $500,000 at the advice of staff, but clearly would be very grateful for any additional funds that the County chooses to provide from the Trust Fund to close the funding gap.

If we do not receive all the funds we have requested, or if committed amounts are lower than expected, we will identify and apply in 2021 and 2022 for additional federal, State, foundation, and private sources. We would also consider using conventional financing for long-term gap filling but want to keep the project affordability level high by avoiding the need to carry mortgage payments into the future.

5.4 <u>Proposed Uses Narrative</u>. For the uses shown in item 5.2, Sources & Uses Table, please explain how the budgeted amount was derived for each of the uses that are applicable to the proposed project. State whether costs are estimated or bid, and provide any other relevant information which justifies the budgeted expense, such as cost per square foot, percentage of other costs (e.g. contingency), estimated number of work hours.

The project general contractor, McDevitt Construction, provided the construction costs as estimates. The overall costs for the housing are within area expectations considering the cost of labor, materials, and professional fees in the Bay Area, as well as considerable costs needed for demolition of the existing building and site work. The following applicable cost categories are within these industry standards:

- 6% Design
- 2% Supervision
- 1% Land survey
- 5% Hard cost contingency
- 10% Soft cost contingency
- 6% Project administration
- 6% Other developer costs, e.g., capital campaign

The general contractor's combined general requirements, overhead, and profit are below 14%, which meets California Department of Housing and Community Development feasibility guidelines.

6. Project Operations

6.1 Annual Operating Budget. Using the Excel file provided, produce an operating budget. Include notes that explain how the budgeted costs were determined and other relevant information that justifies the budgeted expenses.

Please see the Annual Operating & 20-Year Cash Flow Budget attached. The operating expenses are inclusive of Homeward Bound's anticipated operating costs, supportive services costs, pro-rated share of agency admin and other expenses, and finance costs. The housing will be home to veterans who are highly vulnerable, often disabled, and chronically homeless, and who if not housed will remain very high public cost users of emergency systems of care. Hence, the project builds in some costs that most affordable housing projects do not, such as more intensive supportive services and onsite staffing. In developing the operating budget, Homeward Bound carried out a careful line-by-line assessment and compared operating and service needs closely to other Homeward Bound projects serving a similar high needs adult population, including the Voyager Carmel Program and 4th Street Center. We are confident that the operating budget well reflects the actual operating costs the project will incur.

Operating income assumes rent income of $2,923 in year 1, which is the Marin County 2021 Fair Market Rate payment standard for one-bedroom. The rent line includes both the amounts that clients are expected to pay (likely to be only $200-$300 per month for many of the residents given their disabilities plus HUD VASH and Section 8 vouchers paying the balance.

6.2 20-Year Cash Flow. Using the Excel file provided, produce a 20-year cash flow budget. In the space below, provide a narrative of any notable occurrences during the 20-year period.

Please see the Annual Operating & 20-Year Cash Flow Budget attached. The 20-year cash flow assumes a 2% annual increase as is typically expected of HUD- or State-funded affordable housing projects. We do not anticipate any significant or notable occurrences or changes during the 20-year period.

6.3 Section 8 Voucher Compliance. Please confirm that the property will be registered with the Marin Housing Authority as a site that will accept Section 8 vouchers.

We are pleased to confirm that the property will be registered with Marin Housing as accepting HUD VASH vouchers (for veterans who qualify) and Section 8 vouchers (for veterans who do not qualify for the HUD VASH voucher program).

Thank you very much for your support and consideration of this application.

Homeward Bound of Marin, a California nonprofit public benefit corporation,

Employer ID number: 68-0011405
Form 990 required: YES

Dear Taxpayer:

We're responding to your request dated Oct. 24, 2019, about your tax-exempt status.

We issued you a determination letter in JANUARY 1984, recognizing you as tax-exempt under Internal Revenue Code (IRC) Section 501(c)(3).

We also show you're not a private foundation as defined under IRC Section 509(a) because you're described in IRC Sections 509(a)(1) and 170(b)(1)(A)(vi).

Donors can deduct contributions they make to you as provided in IRC Section 170. You're also qualified to receive tax deductible bequests, legacies, devises, transfers, or gifts under IRC Sections 2055, 2106, and 2522.

In the heading of this letter, we indicated whether you must file an annual information return. If you're required to file a return, you must file one of the following by the 15th day of the 5th month after the end of your annual accounting period:

- Form 990, Return of Organization Exempt From Income Tax
- Form 990EZ, Short Form Return of Organization Exempt From Income Tax
- Form 990-N, Electronic Notice (e-Postcard) for Tax-Exempt Organizations Not Required to File Form 990 or Form 990-EZ
- Form 990-PF, Return of Private Foundation or Section 4947(a)(1) Trust Treated as Private Foundation

According to IRC Section 6033(j), if you don't file a required annual information return or notice for 3 consecutive years, we'll revoke your tax-exempt status on the due date of the 3rd required return or notice.

You can get IRS forms or publications you need from our website at www.irs.gov/forms-pubs or by calling 800-TAX-FORM (800-829-3676).

If you have questions, call 877-829-5500 between 8 a.m. and 5 p.m.,

GROUND LEASE

By and Between

THE CITY OF NOVATO

and

HOMEWARD BOUND OF MARIN

Homeless Veteran Housing Project
APN 157-970-07

GROUND LEASE
Homeless Veteran Housing Project
APN 157-970-07

THIS GROUND LEASE (the "Lease") is entered into as of January 27, 2020 ~~2019~~, by and between the City of Novato, a municipal corporation (the "Lessor"), and Homeward Bound of Marin, a California nonprofit public benefit corporation (the "Lessee"), with respect to the following facts:

RECITALS

A. Pursuant to the Homeless Facilities Agreement dated as of December 20, 1995, as amended by a First Amendment to Homeless Facilities Agreement dated as of April 9, 1996 and a Second Amendment to Homeless Facilities agreement dated as of October 1, 2005, between the Hamilton Reuse Planning Authority, acting through the City of Novato and the Marin Continuum of Housing and Services (collectively, the "Homeless Facilities Agreement), the parties agreed that an employment and training center for persons transitioning from homelessness, and certain housing for homeless and transitioning individuals would be made available at Hamilton Army Airfield as part of the reuse process.

B. Consistent with the Homeless Facilities Agreement and pursuant to a Ground Lease entered into on July 5, 2005, a Homeless Facility was constructed by Lessee on property also owned by the City, APN 157-970-05 (the "Homeward Bound Lease"). Said Homeward Bound Lease has been amended from time to time. The initial term of the Homeward Bound Lease expires on July 5, 2040 and may be renewed for a renewal period of thirty (30) years and for a second renewal period of thirty-four (34) years.

C. Thereafter, pursuant to a Ground Lease entered into on July 12, 2005, the Next Key Employment and Training Center was constructed by Lessee on property also owned by the City, APN 157-970-06 (the "Next Key Lease"). Said Next Key Lease has been amended from time to time. The initial term of the Next Key Lease expires on July 12, 2075 and may be renewed for a renewal period of twenty-nine (29) additional years.

D. The Homeless Facilities Agreement provided the possibility for additional homeless-serving facilities to be developed on the property commonly referred to as the HUD Parcel, currently housing Buildings 821, 820 and 816, APN 157-970-07 (the "Subject Property").

E. Lessee desires to lease the Subject Property and to apply to the City to develop additional homeless serving facilities thereon. At the present time, Lessee desires to apply to construct and operate one building with twenty-six (26) one-bedroom apartment units restricted as affordable workforce housing, one building with twenty-four (24) one-bedroom apartments units restricted for housing homeless veterans and a third building with a manufacturing kitchen focused on production of baked goods for enterprise sale, a teaching kitchen space focused on job training for the production kitchen food industry and an event space with a dine-in capacity

of 200 and a complimentary outdoor space and staging area for caterers, which may be constructed in stages.

F. The Lessor and the Lessee desire to enter into this Lease pursuant to which the Subject Property will be leased to Lessee by Lessor for an initial term of fifty-five years (55) years. This Lease may be renewed, by the joint agreement of the parties for a renewal period of thirty (30) additional years pursuant to Section 2.2 of this Lease.

WITH REFERENCE TO THE FACTS RECITED ABOVE, the Lessor and the Lessee (collectively the "Parties") agree as follows:

ARTICLE 1.

DEFINITIONS AND EXHIBITS

Section 1.1 Definitions.

The following terms shall have the following meanings in this Lease:

(a) "Administrative Component" shall mean the office space that may be approved by the City and that, if approved, will comprise a portion of Veterans and Workforce Housing, Employment and Training Center.

(b) "Authorized Officers" shall mean, in the case of the Lessor, the City Manager, and in the case of the Lessee, the Executive Director or President of the Lessee.

(c) "Conditions of Approval" shall mean the City of Novato's conditions of approval, if any, of the Development which may hereafter be approved by the City of Novato pursuant to the normal City entitlement process applicable to the Subject Property (the "Development Entitlements").

(d) "Development" shall mean the Improvements on the Subject Property ultimately approved pursuant to the City's normal development review process and shall include the Lessee's leasehold interest in the Subject Property.

(e) "Development Financing" shall mean loans and/or grants obtained by the Lessee to develop the Improvements, any loan and/or grant refinancing an initial loan and/or grant, or any permanent loan secured by the Development.

(f) "Development Financing Documents" shall mean all documents executed by the Lessee evidencing or securing the Development Financing.

(g) "Dwelling Unit" shall mean any one of the residential housing units which may be ultimately approved as part of the Development.

(h) "Foreclosure Transferee" shall mean a transferee who acquires the Lessee's interest in this Lease and the Development through the exercise of remedies (such as foreclosure or a deed in lieu of foreclosure) pursuant to Development Financing Documents.

(i) "Homeless Facilities Agreement" shall mean the Homeless Facilities Agreement, as amended, discussed in Recital A.

(j) "Homeward Bound" shall mean Homeward Bound of Marin, a California nonprofit public benefit corporation, the Lessee hereunder.

(k) "Improvements" shall mean the buildings, structures, and other improvements, including building fixtures, constructed and owned by Lessee and which may be approved by Lessor and located on the Subject Property from time to time.

(l) "Lease" shall mean this Ground Lease.

(m) "Lease Term" shall mean an initial term of fifty-five (55) years together with any extension thereof in accordance with Section 2.2 below, during which period this Lease shall be in effect (unless earlier terminated in accordance with the provisions of this Lease). At the conclusion of the Lease Term, the Parties may agree to extend the Lease on such terms and conditions as the Parties may agree.

(n) "Lenders and/or Grantors" shall mean all of the lenders and/or grant providers providing the Development Financing to the Lessee.

(o) "Lessee" shall mean Homeward Bound of Marin, a California nonprofit public benefit corporation, and its permitted successors and assigns.

(p) "Lessor" shall mean the City of Novato and its successors and assigns.

(q) "Navy Covenants" shall mean the Quitclaim Deed and Environmental Restriction pursuant to California Civil Code Section 1471, dated September 26, 2001, by and between the United States of America, acting by and through the Department of the Navy, and the City of Novato, recorded on September 28, 2001, in the Official Records of Marin County as Document No. 2001-0063240, in connection with the acquisition of the Subject Property by the City of Novato from the Navy.

(r) "Parties" shall mean the Lessor and the Lessee.

(s) "Performance Standards" shall mean the performance standards for operation of the Improvements as may be approved by the City of Novato prior to or concurrent with the Development Entitlements, as the same may be amended from time to time.

(t) "Residential Component" shall mean the units of housing and appurtenant residential common area that may be approved by the City and which, if approved, will comprise a portion of the Veterans and Workforce Housing, Employment and Training Center.

(u) "Residents" shall mean the residents who are authorized by the Lessee to reside in the Residential Component of the Veterans and Workforce Housing, Employment and Training Center.

(v) "Subject Property" shall mean the land described in the attached Exhibit A, subject to the granting of easements by Lessor to the adjacent real property(ies) for drainage and access purposes as set forth in Section 3.1(a)(2) hereof.

(w) "Training and Event Component" shall mean site improvements that may be approved by the City and, which if approved, will comprise a portion of the Veterans and Workforce Housing, Employment and Training Center, not including the fifty (50) one-bedroom apartment units.

(x) "Veterans and Workforce Housing, Employment and Training Center" shall, if approved by the City, consist of the Training and Event Component, the Administrative Component and the Residential Component to be constructed, owned, and operated by Lessee on the Subject Property.

Section 1.2 Exhibits.

The following exhibits are attached to and made part of this Lease:

EXHIBIT A Description of the Subject Property

EXHIBIT B Title Exceptions

EXHIBIT C Contracts and Assessments Affecting the Subject Property

ARTICLE 2.

LEASE OF THE SUBJECT PROPERTY; PAYMENT OF RENT; [OWNERSHIP OF IMPROVEMENTS]

Section 2.1 Lease of the Subject Property.

(a) The Lessor leases the Subject Property to the Lessee, and the Lessee leases the Subject Property from the Lessor, pursuant to the terms of this Lease.

(b) The Parties shall cause a memorandum of this Lease to be recorded against the Subject Property in the Official Records of the County of Marin.

(c) As a condition of releasing its signature on this Lease from escrow, the Lessee has obtained title insurance insuring the Lessee's interest in the Subject Property subject only to the exceptions set forth in the attached Exhibit B.

(d) The closing costs associated with execution of this Lease and recordation of a memorandum of this Lease, including recording charges, transfer tax, and the Lessee's title insurance policy, shall be borne by the Lessee. Each Party shall bear its own attorneys' fees and costs.

(e) The Lessee accepts the Subject Property in its "as is" physical condition, and except to the extent of the Lessor's representations in Section 8.2, Lessee acknowledges and agrees that Lessor has not made any express or implied representations, warranties, guaranties, promises, statements of assurances whatsoever as to the condition of the Subject Property, any matter that may concern or affect the Subject Property now, in the past or in the future, or the approval of the Development. Nothing in this Section 2.1(e), however, shall be construed to limit the Lessee's rights with respect to the condition of the Subject Property against any person or party other than Lessor or any other public agency or body created by or affiliated with the City of Novato, and Lessee's acceptance of the Subject Property in "as is" condition shall in no way release the United States government or the United States Navy from its statutory and contractual obligations, if any, to remedy any hazardous materials conditions on the Subject Property.

Section 2.2 Term.

The Lease Term shall commence on the date of this Lease and shall continue for fifty-five (55) years. This Lease shall be renewable for a renewal term of an additional thirty (30) years upon the mutual agreement of the Parties. In the event that Lessee desires to renew this Lease for said additional thirty (30) year period, Lessee shall send a written request to Lessor which must be received by Lessor no earlier than one (1) year prior to the expiration of the current lease term and no later than six (6) months before the expiration of the then current lease term. After the expiration of the Lease Term and any extension thereof, this Lease may be renewed for subsequent terms at the mutual agreement of the Lessor and Lessee.

Section 2.3 Payment of Rent.

The rent for the lease of the Subject Property shall be One Dollar ($1) per year. At the close of escrow on this Lease, the Lessee shall pay to the Lessor, at 922 Machin Ave, Novato, California 94945, prepaid rent for the entire Term of this Lease in the amount of fifty-five Dollars ($55). If this lease is terminated prior to the end of the Lease Term, the Lessor shall rebate to Lessee rent paid by Lessee for the period between the date Lessee ceases occupancy of the Subject Property and the remaining Lease Term of the lease.

Section 2.4 Title to Improvements; Modifications.

The Parties intend that the Lessee shall own fee title to any Improvements as and when they are constructed on the Subject Property. Improvements on the Subject Property during the Lease Term shall be and remain the real property of the Lessee; however, the Lessee shall have no right to destroy, demolish or remove the Improvements except as specifically provided for in this Lease or as approved in writing by the Lessor. When the Lease Term expires or when the Lease is otherwise terminated under the terms of this Lease, title to the Improvements shall revert to and vest in the Lessor at no cost to Lessor. It is the intent of the Parties that this Lease shall

create a constructive notice of severance of the Improvements from the Subject Property without the necessity of a deed from the Lessor to the Lessee. The Improvements shall be and remain real property and shall be owned in fee by the Lessee. The Lessee shall execute, at the end of the Lease Term, within ten (10) days of the Lessor's written request, a confirmatory quitclaim deed of the Improvements to be recorded at the Lessor's option and expense, and any other documents that may be reasonably required by the Lessor or the Lessor's title company to provide the Lessor title to the Subject Property and the Improvements free and clear of all monetary liens and monetary encumbrances not caused or agreed to by the Lessor.

Section 2.5 Assignment of Lessee's Leasehold Interest; Transfer of the Development.

(a) The Lessee may assign its interest in this Lease and sell or transfer the Development only with the prior written consent of the Lessor, which consent shall not be unreasonably withheld. However, the following transfers shall not require the consent of the Lessor: (i) leases or subleases of individual rooms, units or spaces in the Residential Component to Residents and to entities providing services to Residents or to Lessee; (ii) leases of space in the Administrative Component to any entity providing employment, administrative or training services in the Training and Event Component provided Lessee provides the City with written notice of such leasing; ; (iii) individual event rentals to third parties of the Training and Event Component; or (iv) any transfer of the Lease or Development to a Foreclosure Transferee provided that the Foreclosure Transferee does not intend to operate the Development on other than an interim basis not to exceed a period of six (6) months and provided that the Foreclosure Transferee agrees in writing to be bound by the terms and conditions of the Lease and all other agreements applicable to the Development or (v) assignment of a security interest in Lessee's interest in the Lease and the Development for financing purposes. Any transfer of a security interest in the Lessee's interest in this Lease and the Development other than those transfers specified above for which Lessor consent is not required shall be subject to Lessor approval. Lessor shall act expeditiously in performing its review of the transfer documents and its approval shall not to be unreasonably withheld. Any transfer of the Lessee's interest in the Lease and the Development from a Foreclosure Transferee shall be subject to Lessor's approval. Lessor shall act expeditiously in performing its review of the transfer documents and its approval shall not be unreasonably withheld provided that such transfer by the Foreclosure Transferee is to an entity which satisfies the criteria specified in Section 9.1(c)(i) and (ii) of this Agreement and such entity agrees in writing to be bound by the terms and conditions of this Lease and all other Agreements affecting the Development. The Lessee may transfer the Development to a nonprofit affiliate of the Lessee or a 501(c)(3) tax exempt nonprofit corporation not affiliated with Lessee and designated by one or more Lenders and/or Grantors, provided that such transfer is approved by Lessor, such approval not to be unreasonably withheld. No one who has not received the consent or approval of the Lessor may operate the Development nor receive the rights of the Lessee hereunder.

(b) The Lessee shall notify the Lessor of the occurrence of a transfer permitted by this Section 2.5 at least thirty (30) days prior to its occurrence, and shall promptly deliver to the Lessor all related documentation reasonably requested by the Lessor, except that

Lessee shall not be required to provide Lessor with notice of the transfers described in subsections 2.5 (a)(i) through 2.5 (a)(v) above.

ARTICLE 3.

CONSTRUCTION OF IMPROVEMENTS

Section 3.1 Development Approval, Preconstruction and Construction Requirements.

(a) **Development Approval and Alteration to the Subject Property.**

(1) After initial approval, Lessee shall not make or suffer to be made any alterations, additions or improvements with respect to the Subject Property without the prior written consent of Lessor. Prior to submitting a complete application for any land use entitlement on the Subject Property, Lessee shall obtain the consent of the Lessor to submit said application. Any alteration to the Subject Property without the prior written consent of Lessor, shall be a breach of this Lease and, at the option of Lessor, shall cause a termination of this Lease.

(2) Any and all improvements proposed to be constructed on the Subject Property shall be subject to all land use, environmental, planning, engineering and other requirements of all applicable federal, state and City of Novato laws, rules and regulations as well as all requirements of any other public agency having jurisdiction over any entitlement or permit requested by the Lessee, including, but not limited to the provisions of the California Environmental Quality Act ("CEQA"). Lessee understands and agrees that nothing in this Lease guarantees the approval of CEQA decision or compliance document, any project or improvement proposed to be constructed on the Subject Property and that Lessor retains full and absolute discretion and all of its police powers to approve, approve with conditions or deny any CEQA compliance document, project or improvement proposed to be constructed on the Subject Property. In the event of a denial, Lessee shall have the right to terminate this Lease. Lessee shall have no recourse whatsoever against Lessor and Lessee shall indemnify, defend and hold harmless Lessor for any claim, damage, action or proceeding relating to the rightful grant or denial of any entitlement or permit requested by the Lessee, including, but not limited to any CEQA decision in accordance with Section 6.4 hereof. Lessee further understands and agrees that the lease of the Subject Property is conditioned upon and subject to, grants of certain easements for drainage and access to adjacent property(ies) in the Lessor's sole discretion. The location and extent of said easements shall be determined by Lessor in Lessor's sole and absolute discretion prior to or concurrent with Development Entitlements, if any, granted for the Development. Lessee understands and agrees that the grant of such easements will affect the development and developability of the Subject Property and may result in changes to the development proposals of Lessee which could increase costs, decrease development potential and/or otherwise affect the feasibility of and any potential development of the Subject Property. Lessee shall have no recourse whatsoever against Lessor and Lessee shall indemnify, defend and hold harmless Lessor for any claim, damage, action or proceeding relating to the grant of such easements or the affect thereof on the development of the Subject Property or the costs thereof in accordance with Section 6.4 hereof. In the event that the City has not granted all required land

use entitlements, including all required compliance with CEQA within eighteen (18) months of the date of this Lease, this lease shall automatically terminate and be of no further force and effect.

(b) **Contractor**. When Lessee has selected a general contractor to construct the Development or phase thereof, Lessee shall execute a construction contract with the selected general contractor (the "Construction Contract"), and deliver a copy to the City, no later than thirty (30) days prior to the application to the City of Novato of a building permit for the Improvements or portion thereof. City shall be named a third party beneficiary to the construction contract, and shall name the City of Novato as an additional insured on all insurance as set forth in section 6.1 hereof. Lessee may change the Contractor at any time, provided the requirements for beneficiary and insurance set forth above are met.

(c) **Financing**. Lessee shall obtain funding and other commitments sufficient to construct the entire Development, or each phase if the Development is to be constructed in phases, prior to commencement of construction of the Development (or applicable phase). Prior to the date Lessee pulls a building permit from the City of Novato, copies of all such commitments shall be submitted to the Lessor, and confirmation by the Lessor that Lessee has commitments for sufficient funding or in-kind assistance to construct the Development or phase thereof pursuant to the Construction Contract.

(d) **Building Permit.** The Lessee shall obtain a building permit from the City of Novato, covering at least the initial phase of the Development, no later than thirty-six (36) months from the date of this Lease. This time shall be extended by the time of any delay by the City of Novato in issuing such building permit.

(e) **Construction.** Lessee shall commence construction of the Improvements (or first phase thereof if the Improvements are phased) no later than one hundred and eighty (180) days following issuance by the City of Novato of a building permit and shall complete construction of the Improvements or first phase thereof and obtain a certificate of occupancy from the City of Novato within eighteen (18) months of the date of commencement of construction. The Improvements shall be constructed in accordance with the terms and conditions of the Development Entitlements, and any and all applicable codes, rules, regulations, permits, approvals and building permits at the time of occupancy. Lessee may, from time to time during the term of the Lease, rehabilitate or modify the Improvements, provided the Lessee has first obtained all permits and approvals required by law. The time for construction shall be extended by the duration of any force majeure conditions such as fires, delays by utilities, etc.

(f) **Extension of Time Periods.** provided, however, that the time requirement for completion of construction may be extended by the Lessor for a reasonable time, up to twelve (12) additional months, upon request of the Lessee for good cause shown.

(g) **Failure to Comply with Time Periods.** The failure of the Lessee to comply with the time limits contained in Sections 3.1(a) through 3.1(e), unless extended in accordance with Section 3.1(f), shall constitute a material breach of this Lease and shall be grounds for termination of this Lease by Lessor, in the sole and absolute judgment of Lessor.

Section 3.2 Equal Opportunity.

During the construction, rehabilitation and/or modification of the Improvements on the Subject Property there shall be no discrimination on the basis of race, color, creed, religion, sex, sexual orientation, age, disability, marital status, national origin, or ancestry in the hiring, firing, promoting, or demoting of any person engaged in the construction work.

Section 3.3 Liens.

Subject to subsection 4.4(d), the Lessee shall promptly pay all sums legally due and payable by the Lessee on account of any labor performed or materials supplied for the Development for which any lien is legally asserted against the Development. In the event any mechanics' or materialmen's lien is filed against the Development, subject to subsection 4.4(d), the Lessee at its expense shall promptly cause such lien to be removed by bonding or otherwise, and the Lessee shall hold the Lessor harmless from any and all such asserted claims or liens

Section 3.4 Permits, Licenses and Easements.

Within ten (10) days after receipt of written request from the Lessee, the Lessor shall (at no expense to it) consent to any and all applications for permits, licenses or other authorizations required by any governmental or other body (other than the City of Novato) claiming jurisdiction in connection with any work that the Lessee may do pursuant to this Lease or the operation of the Development. Lessor shall consider all requests of the Lessee to grants easements for public utilities useful or necessary to the proper construction of the Improvements or the operation of the Development as part of the City's entitlement process.

ARTICLE 4.

USE AND MAINTENANCE OF THE DEVELOPMENT

Section 4.1 Use of Development.

In the event that the Development is ultimately approved by the City of Novato, throughout the Lease Term, the Development shall be used only for the following purposes:

(a) The Lessee shall use or cause the Training and Event Component to be used for employment and vocational training (including culinary and catering training), education, provision of social services, and conference and community space serving homeless people, formerly homeless people, people at immediate risk of becoming homeless, and other community members, in compliance with any and all Conditions of Approval and any and all the Performance Standards.

(b) Lessee shall enter into the City of Novato Affordable Housing Agreement for the Development which shall require, at a minimum, that Lessee shall, with regard to the Residential Component:

(1) Provide to Lessor for Lessor's review and approval a management plan for the Residential Component. The management of the Residential Component shall be provided by a professional housing management company to be approved by the Lessor. In the alternative, Lessee may self-manage the Residential Component. Any material changes to the management plan or to the entity managing the Residential Component shall be subject to Lessor's approval. In the event of a default by Lessee pursuant to Section 9.1(a) of this Lease, which default is related to a failure to properly maintain the Development or to a violation of the Performance Standards, and subject to notice and cure periods contained in Section 9.1(a), the Lessor may require the Lessee to change management companies or to cease self-management of the Development and to enter into a contract with a professional housing management company approved by Lessor upon 60 days written notice from Lessor.

(2) Rental of at least forty-five percent (45%) of the units in the Residential Component shall be restricted to Very Low Income Veterans, earning no more than fifty percent (50%) of Area Median Income (AMI), with rents not exceeding thirty percent (30%) of fifty percent (50%) of AMI or as required by written agreement between Lessee and any funding entity providing funding for the Development, whichever is lowest. Rental of at least fifty-five percent (55%) of the units in the Residential Component shall be restricted to Very Low Income households, earning no more than fifty percent (50%) of AMI with rents not exceeding thirty percent (30%) of fifty percent (50%) of AMI or as required by written agreement between Lessee and any funding entity providing funding for the Development, whichever is lowest.

(3) Lessee shall be required to enter into written leases with the tenants of the Residential Component which incorporate the Performance Standards and any requirements of the Affordable Housing Agreement.

(c) The Administrative Component shall only be used for administrative and office space for Lessee and any other entity under contract with Lessee to provide employment training or other services in the Development.

(d) The Development shall not be used for any other use, program or purpose not set forth above without the written consent of the Lessor. However, without obtaining Lessor's written consent, Lessee may provide for non-profit groups serving the Marin County community, meeting spaces on an occasional basis and classes on an occasional basis.

(e) The Lessee shall comply with all applicable and lawful statutes, rules, orders, ordinances, requirements, and regulations of the United States, the State of California, and any other governmental authority having jurisdiction over the Development, including the Navy Covenants; however, the Lessee may, in good faith and on reasonable grounds, dispute the applicability or the validity of any charge, complaint, or action taken pursuant to or under color of any statute, rule, order, ordinance, requirement, or regulation, defend against the same, and in

good faith diligently conduct any necessary proceedings to prevent and avoid any adverse consequence of the same. The Lessee agrees that any such contest shall be prosecuted to a final conclusion as speedily as reasonably possible. The Lessee shall defend and hold the Lessor, and Lessor's elective and appointive officers, employees, agents, volunteers, agents and contractors, free and harmless from any violation by Lessee of applicable law or from any proceeding through which the Lessee may contest or dispute the applicability of such law, including the outcome thereof. This indemnification shall not apply to any proceeding through which the Lessee contests or disputes a law enacted by the Lessor provided that Lessee prevails in such proceeding and such law is either found invalid or Lessee is found not to have violated such law. In the case of proceedings involving a law enacted by Lessor, the Lessor shall not be obligated to indemnify or hold Lessee harmless, or to reimburse Lessee's costs, expenses and attorney fees even if Lessee prevails in the proceeding, such law is found invalid and/or Lessee is found not to have violated such law.

(f) The Lessor will, jointly with Lessee and prior to or concurrent with any approval for the Development, adopt Performance Standards for the operation of the Improvements. All proposed modifications thereafter are to be reviewed by the City Council. The City Council shall consider proposed modifications at a public hearing, notice of which shall be provided to Lessee, to the community and to all interested parties in the manner determined by the City Council. At the public hearing, the City Council shall hear testimony from the Lessee, the public and all interested parties concerning the proposed modifications. At the close of the public hearing, the City Council shall determine whether or not to modify the Performance Standards. The decision of the City Council shall be final.

If Lessee reasonably believes that a City Council modification to the Performance Standards violates State or Federal Fair Housing Laws, Lessee shall notify Lessor of the legal standards which support Lessee's contention and any citations and authorities in support thereof. If Lessor disputes Lessee's contentions, the Lessor and Lessee agree that the question of whether the modification at issue violates Fair Housing laws shall be submitted to arbitration before an arbitrator agreed to by the parties. The arbitration costs shall be shared equally by Lessor and Lessee. The City Council shall receive a copy of the arbitrator decision at the conclusion of the arbitration process. If the arbitrator agrees with Lessee that the modification at issue violates Fair Housing laws, the City Council shall then consider whether to revise the Performance Standards based on the arbitrator's decision.

Section 4.2 Maintenance of the Development.

During the term of this Lease, the Lessee shall perform, or cause to be performed, all maintenance and repairs necessary to maintain the Development in good repair and tenantable condition, and Lessee's annual budget for the Development shall include line items for reasonable maintenance and repair costs. In determining what constitutes good repair and tenantable condition, Section 19.31.030 of the Novato Municipal Code, as amended, is hereby incorporated by reference. Pursuant to the Affordable Housing Agreement and any and all Conditions of Approval for the Development, Lessee shall provide the City with a written plan providing for ongoing maintenance of the facility in compliance with Section 19.31.30 of the Novato Municipal Code. Lessee shall be in violation of this Lease if the Property is maintained

by Lessee in such a manner as to result in any of the conditions presently identified in Section 19.31.030 or as such section may later be amended by action of the Novato City Council

Section 4.3 Utilities.

The Lessee shall be responsible for the cost of all utilities, including water, heat, gas, electricity, waste removal, sewers, and other utilities or services supplied to the Development, and (subject to Section 4.4(d)) the Lessee shall pay or cause utility costs to be paid currently and as due.

Section 4.4 Taxes and Assessments.

(a) Payment of Taxes and Assessments. The Lessee shall, during the entire Lease Term, at its own cost and expense, and except as to exemptions granted pursuant to State law as of the date this Agreement is executed, unless such exemptions are later repealed, pay the public officers charged with their collection, as the same become due and payable and before any fine, penalty, interest, or other charge may be added to them for nonpayment, all taxes and assessments of any nature, including all real estate taxes, general and special, ordinary and extraordinary, unforeseen as well as foreseen, of any kind and nature, made, assessed, levied, or imposed upon, or due and payable in connection with, or which become an lien upon, the Subject Property, the Improvements, or any part of the Subject Property or Improvements, or upon the Lessee's leasehold interest in the Subject Property pursuant to this Lease, as well as assessments or Mello-Roos special taxes for which Lessee is responsible pursuant to Government Code Section 53340.1 or otherwise, for sidewalks, streets, sewers, water, or any other public improvements and any other improvements or benefits which shall, during the Lease Term, be made, assessed, levied, or imposed upon or become due and payable in connection with, or a lien upon, the Subject Property, the Improvements, or any part of the Subject Property or Improvements, or upon the Lessee's leasehold interest in the Subject Property pursuant to this Lease.

(b) Payment of Fees. During the entire Lease Term, the Lessee shall pay, at its own cost and expense, before any fine, penalty, interest, or other charge may be added for nonpayment, all license and permit fees, charges for public utilities, and governmental charges relating to the use or occupancy of the Improvements. Pursuant to California Revenue and Taxation Code Section 107.6, Lessee is advised that Lessee's interest in this Lease and the Development may constitute a possessory property interest subject to property taxation and Lessee may be subject to the payment of property taxes levied on that interest. Furthermore, any such possessory property interest tax shall be paid by Lessee pursuant to the terms of this Lease.

(c) Copies of Notices to Lessee. The Lessor shall promptly send to the Lessee copies of any and all notices received by it in respect to any taxes, assessments, charges, or fees for which the Lessee is liable pursuant to this Section 4.4.

(d) Lessee's Right to Contest. If the Lessee disputes any amount or validity of any liens, taxes, assessments, charges, penalties, or claims, including liens or claims of materialmen, mechanics, or laborers, upon the Subject Property or the Improvements, the Lessee

may contest and defend against the same at its cost, and in good faith diligently conduct any necessary proceedings in connection therewith to prevent and avoid the same; however, such contest shall be prosecuted to a final conclusion as speedily as possible. During any such contest, the Lessee shall (by the payment of such disputed taxes, assessments, or charges, if necessary) prevent any advertisement of tax sale, foreclosure, or divesting of the title to the Subject Property and Improvements. The Lessee shall hold the Lessor, the City of Novato, the Redevelopment Agency of the City of Novato, their respective elective and appointive officers, employees, agents and contractors, free and harmless in any such contest or proceeding, including the outcome thereof.

Section 4.5 Hazardous Materials.

(a) Definitions. The following special definitions shall apply for the purposes of this Section 4.5 and Section 6.4:

(1) "Hazardous Materials" shall mean:

(A) any "hazardous substance" as defined in Section 101(14) of CERCLA (42 U.S.C. Section 9601(14)) or Section 25281(d) or 25316 of the California Health and Safety Code, as amended from time to time;

(B) any "hazardous waste," "infectious waste" or "hazardous material" as defined in Section 25117, 25117.5 or 25501(j) of the California Health and Safety Code, as amended from time to time;

(C) any other waste, substance or material designated or regulated in any way as "toxic" or "hazardous" in the RCRA (42 U.S.C. Section 6901 et seq.), CERCLA Federal Water Pollution Control Act (33 U.S.C. Section 1521 et seq.), Safe Drinking Water Act (42 U.S.C. Section 3000 (f) et seq.), Toxic Substances Control Act (15 U.S.C. Section 2601 et seq.), Clean Air Act (42 U.S.C. Section 7401 et seq.), California Health and Safety Code (Section 25100 et seq., Section 3900 et seq.), or California Water Code (Section 1300 et seq.), as amended from time to time; and

(D) any additional wastes, substances or material which at such time are classified, considered or regulated as hazardous or toxic under any other present or future environmental or other similar laws relating to the Development.

(E) Notwithstanding the foregoing, the term "Hazardous Materials" shall not include the following: construction materials in reasonable quantities for lawful use in the construction or rehabilitation of the Improvements; reasonable quantities of gardening materials, household products, office supply products or janitorial supply products of the type customarily used in the construction, maintenance, rehabilitation, or associated with buildings and grounds, or typically used in household activities, in a manner typical of other residential housing developments which are comparable to the Improvements; and certain substances which may contain chemicals listed by the State of California pursuant to Health and Safety Code Sections 25249.8 et seq., which substances are commonly used in

reasonable quantities and in a lawful manner by a significant portion of the population living within the region of the Development, including (but not limited to) alcoholic beverages, aspirin, tobacco products, nutrasweet, prescription medications, and saccharine.

(2) "Hazardous Materials Laws" means all federal, state, and local laws, ordinances, regulations, orders and directives pertaining to Hazardous Materials in, on or under the Development or any portion thereof.

(b) Certain Covenants and Agreements.

(1) The Lessee shall not knowingly permit the Development or any portion thereof to be a site for the use, generation, treatment, manufacture, storage, disposal or transportation of Hazardous Materials or otherwise knowingly permit the presence of Hazardous Materials in, on or under the Project.

(2) The Lessee shall keep and maintain the Development and each portion thereof in compliance with, and shall not cause or permit the Development or any portion thereof to be in violation of, any Hazardous Materials Laws.

(3) Upon receiving actual knowledge of the following, the Lessee shall immediately advise the Lessor in writing of: (A) any and all enforcement, cleanup, removal or other governmental or regulatory actions instituted, completed or threatened against the Lessee or the Development pursuant to any applicable Hazardous Materials Laws; (B) any and all claims made or threatened by any third party against the Lessee or the Development relating to damage, contribution, cost recovery, compensation, loss or injury resulting from any Hazardous Materials (the matters set forth in the foregoing clause (A) and this clause (B) are hereinafter referred to as "Hazardous Materials Claims"); (C) the presence of any Hazardous Materials in, on or under the Development; or (D) the Lessee's discovery of any Hazardous Materials on any real property adjoining or in the vicinity of the Development, which Lessee reasonably believes may impact the Development. If the Lessor reasonably believes that the Lessee is not acting prudently and with diligence, or if the Lessor otherwise reasonably believes that its interests are not adequately protected, then the Lessor shall have the right to join and participate in, as a party if it so elects, any legal proceedings or actions initiated in connection with any Hazardous Materials Claims.

(4) Without the Lessor's prior written consent, which shall not be unreasonably withheld, the Lessee shall not take any remedial action in response to the presence of any Hazardous Materials on, under, or about the Development (other than in emergency situations or as required by governmental agencies having jurisdiction), nor enter into any settlement agreement, consent decree, or other compromise in respect to any Hazardous Materials Claims.

Section 4.6 Non-Discrimination.

The Lessee shall not, in the selection or approval of Residents for the Residential Component, nor in the operations of the Veterans and Workforce Housing, Employment and

Training Center or provision of services at or from the Development, or in any other manner or matter, unlawfully discriminate against any person or group of persons on the grounds of sex, race, color, religion, ancestry, national origin, disability, medical condition, genetic information, marital status, sexual orientation, citizenship, primary language, or immigration status or any other basis prohibited by Section 51 of the California Civil Code or any subsequent, Federal, State, or local law, rule or regulation.

Section 4.7 Reporting.

The Lessee shall submit to the Lessor not later than one hundred twenty (120) days after the close of each fiscal year a copy of the Lessee's most recent annual report. The Lessee may seek an extension of this requirement if the most recent annual report has not been completed within this one hundred twenty (120) - day period. The Lessee shall also submit to Lessor not later than said one hundred twenty (120) days, a statistical report on the operation of the Development over the past fiscal year, including the following information: (a) the number of employment training participants utilizing the Development during the year; (b) the number of individuals and veterans residing in the Residential Component during the year, the income levels of all Residents, the length of stay for each Resident, and the apprenticeship or job training program in which the Resident is presently enrolled, if any; (c) the services and programs provided at the Development (d) a copy of the annual financial report for the Lessee; (e) the number of Residents who have moved out of the Development, (f) the number of Residents working full and part time and not working, the number of Residents engaged in employment training and the number of persons placed in full or part-time employment; (g) the amount of space, if any, in the Administrative Component leased to persons or entities providing employment training in the Training and Event Component; (h) copies of complaints filed by any person not a resident of the Development regarding the operation of the Development or alleging a violation of the Performance Standards; (i) copies of correspondence between the Lessee and those persons filing such complaints and the manner in which each such complaint was resolved; (j) the number of community meetings hosted during the past year as well as the number of veterans and senior citizens served at the Development; (k) the number of Resident complaints received; and (l) as the information is available, the number and percentage of Residents and Training and Event Component trainees who are employed.

ARTICLE 5.

CONSTRUCTION LOANS AND GRANTS

Section 5.1 Liens and Encumbrances Against Lessee's Interest in the Leasehold Estate.

(a) Lessee shall have the right to encumber, with the consent of Lessor, the leasehold estate created by this Lease and Lessee's fee interest in the Improvements with deeds of trust or comparable documents securing the Development Financing and by regulatory agreements or other restrictive covenants associated with such financing. Lessee shall provide

Lessor with written notice of all such encumbrances at lease thirty (30) days prior to the execution of any encumbrance documents.

(b) The Lessee shall not have the right under any circumstances without the advance written consent of Lessor, in the Lessor's sole and absolute discretion, to encumber the Lessor's interest in the Subject Property or the Improvements. If the Lessor so consents, then the encumbrance documents must state that the Lessor's liability is limited to the real property security for the loan or grant, and that the Lessor is not liable for repayment of such loan or grant or any other borrower obligation, and that the Lessor shall have the notice and cure rights described in Section 5.5.

(c) For as long as there is any lien securing any Development Financing:

(1) Any Lender or Grantor which has an outstanding Development financing loan or grant shall have the right, but not the obligation, at any time to pay any or all of the rent due pursuant to the terms of this Lease, and do any other act or thing required of the Lessee by the terms of this Lease, to prevent termination of this Lease. However, this right shall not extend the time to cure the default beyond that time provided for in the written notices to Lessee as specified in Section 9.1(a) of this Lease. All payments so made and all things so done shall be as effective to prevent a termination of this Lease as the same would have been if made and performed by the Lessee instead of by the Lender(s) and Grantor(s).

(2) Any default under this Lease which by its nature cannot be remedied by any Lender or Grantor within the notice period provided to Lessee pursuant to Section 9.1(a) of this Lease, shall be deemed to be remedied if, (A) within this notice period, any Lender or Grantor has acquired the Lessee's leasehold estate or commenced foreclosure or other appropriate proceedings, (B) the Lender or Grantor diligently prosecutes any such proceedings to completion, (C) the Lender or Grantor has fully cured any default in the payment of any monetary obligations of Lessee, and (D) after gaining possession of the Development, the Lender or Grantor performs all other obligations of Lessee hereunder when the obligations are due.

(3) The Lessor shall mail or deliver to any Lenders and/or Grantors which have outstanding Development Financing loans or grants a duplicate copy of all notices which the Lessor may from time to time give to the Lessee pursuant to this Lease provided that Lessee has provided Lessor with the names and addresses of such Lenders and/or Grantors. Failure of the Lessor to provide such notices shall in no way invalidate or constitute a defense to any action taken by Lessor in connection with such notice.

(4) In the event any Foreclosure Transferee becomes the Lessee under this Lease by means of foreclosure or deed in lieu of foreclosure or pursuant to any new lease as set forth below, that Foreclosure Transferee shall be personally liable under this Lease or such new lease only for the period of time that the Foreclosure Transferee remains the lessee.

(5) If a Foreclosure Transferee becomes the legal owner of the leasehold estate, and upon written request by the Foreclosure Transferee within sixty (60) days after becoming the legal owner of the leasehold estate, the Lessor shall enter into a new lease of the

Subject Property with the Foreclosure Transferee for the remainder of the Lease Term with the same agreements, covenants, reversionary interests, and conditions (except for any requirements which have been fulfilled by the Lessee prior to termination) as are contained in this Lease and with priority equal to this Lease, so long as the Foreclosure Transferee promptly cures any and all defaults by the Lessee.

(6) If the Lease is terminated by a bankruptcy proceeding, foreclosure, or by other operation of law, then the Lessor shall, upon request by a Lender or Grantor, execute a new lease of the Subject Property to the Lender or Grantor, on the same terms and conditions as this Lease, except that the term will commence on the date of the new lease and will continue for the remaining unexpired term of this Lease. If the Lessor receives conflicting requests for a new lease of the Subject Property, then the Lessor shall execute a new lease of the Subject Property with the requesting Lender or Grantor having the most senior deed of trust. Any transfer of the lease to a transferee of the Lender or Grantor shall be subject to the Lessor's consent requirement contained in Section 2.5(a) of this lease and the indemnification and hold harmless provisions in Section 6.4.

(7) The Lessor shall reasonably cooperate in including in this Lease by suitable amendment from time to time any provision which may reasonably be requested by any proposed Lender or Grantor for the sole purpose of implementing the mortgagee-protection provisions contained in this Lease and allowing such Lender or Grantor reasonable means to protect or preserve the lien of its leasehold mortgage or lien and the value of its security at no expense or risk to Lessor. The Lessor shall execute and deliver (and to acknowledge, if necessary, for recording purposes) any agreement necessary to effect any such amendment, so long as such amendment does not in any way affect the Lease Term or rent under this Lease or otherwise in any material respect adversely affect any rights of the Lessor under this Lease.

Section 5.2 Cost of Development Financing to be Paid by Lessee.

The Lessee shall bear all of the costs and expenses in connection with (a) the preparation and securing of the Development Financing, (b) the preparation, execution, and delivery of any instruments and documents and their filing and recording, if required, and (c) preparation, execution, and all taxes and charges payable in connection with the Development Financing.

Section 5.3 Proceeds of Development Financing.

All Loan and Grant proceeds shall be paid to and become the property of the Lessee, and the Lessor shall have no right to receive any such Loan and Grant proceeds, unless the parties to the Loan or Grant agree to the contrary.

Section 5.4 Notice and Right to Cure Defaults Under Development Financing.

In the event of default by the Lessee under a Loan or Grant, notice shall be given to the Lessor at the same time given to the Lessee, and the Lessor shall have the right, but not the obligation, to cure the default with the same cure period provided to the Lessee under the applicable Loan or Grant Document. Any payments made by the Lessor to cure a default shall

be treated as rent due from the Lessee, which shall be paid within sixty (60) days of the date on which the payment was made by the Lessor. Failure by the Lessee to pay such amount in full within this 60-day period, shall constitute an event of default pursuant to Section 9.1 of this lease and entitle the Lessor to recover possession of the Subject Property. Any monies not paid in full to Lessor within this 60-day period shall accrue interest at the rate of 5 percent per annum from the date the default occurred until paid.

ARTICLE 6.

INSURANCE

Section 6.1 Required Insurance Coverage.

(a) Commercial Property Coverage. The Lessee shall keep the Subject Property and Development insured against loss or damage by a standard commercial property special form policy in amounts not less than the replacement value of the Development, or should insurance in such amount not be reasonably and commercially available, such lesser amount as may be acceptable to both the Lessor and Lenders and/or Grantors. The amount of such insurance shall be adjusted by reappraisal of the Improvements by the insurer or its designee at least once every five (5) years during the Lease Term, if requested by the Lessor. If a special form policy insuring the full replacement value of the Development is not reasonably and commercially available, then the Lessee shall obtain and maintain an extended coverage endorsement that ensures the full replacement value of the Development as soon as such coverage becomes commercially and reasonably available. The property policy shall provide for losses to be payable to the Lessor and Lessee (and Lenders and/or Grantors) as their interests may occur and that the insurer shall not have rights of recovery against the Lessor and Lessee.

(b) Liability and Property Damage Insurance. The Lessee shall at all times during the terms of this Lease keep in full force and effect a policy or policies of commercial general liability insurance against liability for bodily injury to or death of any person or property damage arising out of or in any way related to the operation, use, occupancy, or development or construction upon the Subject Property and on any occurrence on or about the Development. The insurance shall be written on an occurrence basis and the limits of such insurance shall be not less than Four Million Dollars ($4,000,000) combined single limit for bodily injury and property damage. The limits of the insurance shall be adjusted once every five (5) years if and as reasonably required by the Lessor.

(c) Workers' Compensation Insurance. The Lessee shall carry or cause to be carried workers' compensation insurance, with statutory limits as required by the California Labor Code, covering all persons employed by the Lessee in connection with the Subject Property/and or Development which shall provide for a waiver of subrogation in favor of the Lessor. Such coverage shall include a waiver of subrogation endorsement in favor of Lessor

(d) Builders' Risk Insurance. During the course of any alteration, construction or reconstruction, the cost of which exceeds Fifty Thousand Dollars ($50,000), the Lessee shall

require any contractor to provide builders' risk insurance for one hundred percent (100%) completed value on the insurable part of the Subject Property and Development. The builder's risk policy shall provide for losses to be payable to the Lessor and Lessee as their interests may occur and that the insurer shall not have rights of recovery against the Lessor and Lessee.

(e) Contractor Insurance. All contractors employed by Lessee to perform construction work on the Development, regardless of the value of such construction, shall carry commercial general liability insurance, worker's compensation insurance and automobile insurance as required pursuant to this Section 6.1 and 6.2 and shall name Lessor and Lessee as additional insureds with endorsements in a form acceptable to Lessor.

(f) Automobile Insurance. If the Lessee and its contractors and agents own, use, or lease vehicles, then the Lessee shall carry or caused to be carried comprehensive automobile liability insurance with limits not less than One Hundred Thousand Dollars ($100,000) per occurrence/Three Hundred Thousand Dollars ($300,000) aggregate for bodily injury and property damage, including coverages for owned, non-owned and hired vehicles, as applicable.

Section 6.2 Insurance Policies and Premiums.

(a) All liability policies required by this Lease or any Development Financing Document, including without limitation all policies obtained by Lessee's contractors pursuant to Section 6.1(e) above, shall name the Lessor and Lessor's elected and appointed officials, officers, employees, agents, volunteers, guests, invitees and contractors as additional insureds, and shall provide cross liability among insureds, and state that as to claims related to the work performed, the insurance shall be primary as to the additional insureds under this Lease, so that any other policies held by the Lessor, if any, shall not contribute to any loss under the insurance. Coverage shall be at least as broad as coverage set forth in ISO 20 10 11 85 endorsement.

(b) Insurance shall be placed with insurers with a current Best Rating of no less than A:VII. If at any time the Best Rating of Lessee's insurer falls below A:VII, the Lessee shall have 30 days to secure a new insurer who satisfies a Best Rating of A:VII. Any deductible or self-insured retention shall be disclosed to and approved, in writing, by the Lessor.

(c) Upon execution of this Lease, the Lessee shall furnish the Lessor with certificates and original endorsements effecting the required coverage in a form acceptable to Lessor. Thereafter, such evidence shall be provided annually, or if and when there are changes of insurance, and, in any event, promptly upon request. The endorsements shall be signed by persons authorized by the insurer to bind coverage on its behalf. The endorsements shall be on forms provided by the Lessor or as approved by the Lessor. If the Lessee does not keep all required insurance policies in full force and effect, or such insurance does not satisfy the terms and conditions of this Lease, then the Lessor may, in addition to other remedies under this Lease, take out the necessary insurance, and the Lessee shall pay the cost of such insurance within ten (10) days of invoice from Lessor. All insurance required by this section shall provide for severability of interests and shall provide that an act or omission of one of the named insureds shall not reduce or avoid coverage to the other named insureds.

(d) Each policy of insurance required pursuant to this Lease shall provide that it may not be cancelled, reduced in amount of coverage or otherwise materially modified without notice, in writing, delivered to Lessee and the Lessor at their respective principal offices at least thirty (30) days before the effective date of change or cancellation.

Section 6.3 Proceeds of Insurance.

(a) In the event of damage or destruction to the Development, all commercial property insurance (including builder's risk) proceeds shall be applied to the payment of the costs of repairing or rebuilding that part of the Subject Property and Development damaged or destroyed if (i) the Lessee agrees in writing within ninety (90) days after payment of the proceeds of insurance that such repair or rebuilding is economically feasible, and (ii) each Lender or Grantor with outstanding Development Financing permits such repairing or rebuilding, provided that the extent of Lessee's obligation to restore the Development shall be limited to the amount of the insurance proceeds. Lessee agrees to utilize best efforts to obtain the agreement of Lenders and/or Grantors to the utilization of insurance proceeds for rebuilding of the Development. If the Development is not repaired or rebuilt, all such proceeds shall be applied in a manner consistent with the terms of the Development Financing, with any conflicts resolved in accordance with the relative priority of their respective deeds of trust.

(b) If no Development Financing is outstanding, then all insurance proceeds received under the policies set forth in this Article 6 shall be paid to the parties hereto in proportion to their interests, provided that the Lessee shall apply such proceeds, to the extent possible, to reconstruction or repair in a manner consistent with the provisions of Section 7.2.

(c) If the Development is damaged or destroyed and is not rebuilt or repaired within three (3) years of the date of damage or destruction, the Lessor may terminate this Lease with respect to the portion of the Subject Property on which the unrepaired portion of the Development is located. This three-year period may be extended for up to three additional six month periods if Lessee demonstrates to Lessor's satisfaction that the additional time is necessary to rebuild the Development, the reasons why the Development cannot be rebuilt without the extension, and that Lessee will be able to rebuild the Development upon the granting of the additional extension. The Lessee may further seek to extend this period for an additional six-month period but the decision of whether or not to provide for this additional six-month period shall rest with the sole and absolute discretion of the Lessor.

Section 6.4 Indemnification.

(a) The Lessee shall indemnify, defend and hold harmless the Lessor and Lessor's elective and appointive officials, officers, employees, agents, volunteers, guests, invitees and contractors ("Lessor Indemnitees") from and against any and all third party claims, actions, demands, judgments, settlements, costs, expenses and attorney's fees arising out of, attributable to, or otherwise occasioned, in whole or in part, by (i) any act or omission of the Lessee, any officer, partner, agent, employee, contractor, tenant, guest, or invitee of the Lessee; (ii) the Lessee's design, construction, use or operation of the Development or any part thereof and any approval or denial of any application, permit or entitlement relating to the Development

by Lessor; (iii) any activity, work, or other thing done, permitted or suffered by the Lessee in or about the Subject Property, adjacent property and/or the Development; (iv) any claim arising after the date of execution of this Lease from the prevailing wage laws of the State of California and/or the federal government; and (v) any breach or default in the performance of any obligation on the Lessee's part to be performed under the terms of this Lease, and in any case, any action or proceeding brought against the Lessor Indemnitees by reason of any such claim, the Lessee upon notice from the Lessor shall defend any and all Lessor Indemnitees at the Lessee's expense by counsel reasonably satisfactory to the Lessor. The Lessor or Lessor Indemnitees shall not be liable for any damage to property entrusted to the Lessee's employees, nor for loss or damage to any property by theft or otherwise, not for any injury to or damage to persons or property resulting from the Lessee's operation or occupancy of the Subject Property or the Development.

(b) Any contractor retained by Lessee to perform construction work on or relating to, the Subject Property and/or Development, and any other entity under contract with Lessee to provide employment training or other services in the Development, shall agree in writing to release and hold harmless the Lessor Indemnitees in the same manner as set forth above for Lessee in connection with the work or services performed by the contractor or the entity.

(c) The Lessee agrees that it has not, and will not, use, generate, store or dispose of any Hazardous Material (as defined in Section 4.5(a) above) on, under, about or within the Property in violation of any law or regulation and the Lessee shall indemnify and hold harmless Lessor Indemnitees from and against any and all losses, liabilities, claims and/or costs and expenses (including, without limitation, any fines, penalties, judgments, litigation costs, attorney's fees, remediation costs, and consulting, engineering and construction costs) arising from or as a result of a breach of this warranty and representation or as a result of the disposal, storage, generation or release on the Development at any time during the term of this Lease of any Hazardous Materials, except to the extent caused by the gross negligence or willful misconduct of any Lessor Indemnitee regardless of whether such liability, cost or expense arises during or after the Lease Term. Should any discharge, leakage, spillage, emission, or pollution or any type occur upon or from the Development due to the Lessee's operation, use and/or occupancy thereof, the Lessee, at the Lessee's expense, shall clean all property affected thereby to the satisfaction of the Lessor and any governmental body having jurisdiction thereover.

(d) The Lessee acknowledges that the Lessee is not looking to or relying upon the Lessor to disclose any matters which the Lessor might be required to disclose under California Health and Safety Code Section 25359.7 and that all such matters have been investigated by the Lessee to the Lessee's satisfaction. In this regard, the Lessee specifically waives any and all rights it may have pursuant to the provisions of California Health and Safety Code Section 25359.7.

(e) The indemnifications provided pursuant to this Section 6.4 shall survive the termination of this Lease.

ARTICLE 7.

CONDEMNATION, DAMAGE OR DESTRUCTION OF THE DEVELOPMENT

Section 7.1 Condemnation.

If the Development or the Subject Property or any part thereof is taken or condemned, for any public or quasi-public purpose or use by any competent entity in appropriate proceedings, or by any right of eminent domain, then the Lessor and Lessee shall utilize best efforts to continue to operate the Development in compliance with this Lease. The Lessor and Lessee shall request that awards and other payments on account of a taking of the Development and the Subject Property (less costs, fees and expenses incurred by the Lessor and Lessee in connection with the collection thereof) be divided by the presiding court between loss of value of the fee interest in the Subject Property and loss of value of the Development. In any case, subject to the rights of Lenders and/or Grantors under the Development Financing Documents (with any conflicts resolved in accordance with the relative priority of their respective deeds of trust), such awards and payments shall be applied as follows:

(a) Net awards and payments received on account of a partial taking of the Development, other than a taking for a temporary use not exceeding one (1) year, shall be allocated and paid in the following order of priority:

(i) If the Lessee reasonably believes restoration on the remainder of the site is economically feasible, and will result in a viable and safe operation, and unless the Lessee is then in default and the opportunity to cure has expired under the Development Financing Documents, first, to pay the cost of restoration of the Development, provided that the extent of the Lessee's obligations to restore the Development shall be limited to the amount of the net award and payment received on account of the taking. The Lessee shall furnish to the Lessor evidence reasonably satisfactory to the Lessor of the total cost of the restoration of the Development and the cost to ensure a viable and safe operation. In such event, the condemnation proceeds shall be paid into the Construction Fund described in Section 7.2 below, subject to the rights of Lenders and/or Grantors to collect and disburse such funds.

(ii) Second, or first if (i) the Lessee does not reasonably believe that restoration is economically feasible or that restoration will not result in a viable and safe operation, or (ii) the Lessee is in default and the opportunity to cure has expired under the Development Financing Documents, to any Lenders and/or Grantors (in the order of their respective lien priority, if there is more than one Lender or Grantor) in an amount equal to the decrease (if any) in the value of the security for their respective Development Financing as a result of the partial taking (calculated as set forth below in this subsection 7.1(a)(ii)), less amounts

payable to or recovered by the Lender or Grantor pursuant to such taking, but not to exceed the unpaid balance of their Development Financing. For purposes of this subsection 7.1(a)(ii), the amount of decrease in the value of the security for a loan or grant shall be the amount, if any, necessary to reduce the outstanding principal of the loan or grant such that the Loan to Value Ratio (as defined below) of the loan or grant immediately following the taking is equal to the Loan to Value Ratio of the loan or grant immediately preceding the taking. Loan to Value Ratio shall mean that fraction the numerator of which is the sum of the principal amount of the loan or grant plus the principal amounts of all Development Financing higher in lien priority to the loan or grant either immediately following the taking (after taking into account any paydown pursuant to this subsection of any loans of higher priority) or immediately preceding the taking, as applicable, and the denominator of which is the appraised value of the Development immediately following the taking or immediately preceding the taking, as applicable. The values of the Development immediately preceding the taking and immediately following the taking shall be determined by an MAI or SRI appraiser selected by the Lessee and who is reasonably satisfactory to the Lessor.

(iii) The balance, if any, shall be divided between the Lessor and the Lessee in the manner specified in subparagraph (e) below; however, if the taking has no effect on the value of the Lessor's fee interest in the Subject Property and to the reversionary interest in the Improvements, then the balance shall be paid exclusively to the Lessee.

(b) Net awards and payments received on account of a partial or total taking of only the Lessor's fee interest in the Subject Property or the reversionary interest in the Improvements (that is, a taking of the Lessor's fee interest in the Subject Property or the Lessor's reversionary interest in the Improvements that has no effect on the value of the Lessee's leasehold interest in the Subject Property or the Lessee's fee interest in the Improvements), including severance damages, shall be paid to the Lessor, subject to the rights of any Lenders and/or Grantors to which the Lessor has encumbered its fee interest in the Subject Property (in the order of their respective lien priority, if there is more than one such Lender or Grantor), which amount shall be free and clear of any claims of the Lessee, or any other persons claiming rights to the Subject Property through or under the Lessee, other than Lenders and/or Grantors to which the Lessor has encumbered its interest in the Subject Property.

(c) Net awards and payments received on account of a taking for temporary use not exceeding one (1) year and relating to a period during the Lease Term shall be paid to the Lessee; however, if such taking for temporary use has resulted in any damage to or destruction of the Development, then such net awards and payments shall be first applied to pay the cost of restoration if the Lessee determines that restoration is economically feasible, viable, and safe. Net awards and payments received on account of a taking for temporary use not exceeding one (1) year and relating to a period beyond the Lease Term shall be paid to the Lessor.

(d) Net awards and payments received on account of a total taking of the Development shall be allocated and paid in the following order of priority:

(i) First, to any Lenders and/or Grantors with then-outstanding Development Financing secured by the Development (in the order of their respective lien priority, if there is more than one Lender or Grantor), an amount equal to the unpaid balance secured by their respective Development Financing to the extent there are sufficient funds to make such payments;

(ii) Second to the Lessor up to the total value of the fee interest of the Subject Property.

(iii) the balance, if any, shall be divided between the Lessor and the Lessee in the manner specified in subparagraph (e) below; however, if the taking has no effect on the value of the Lessor's fee interest in the Subject Property and to its reversionary interest in the Improvements, then the balance shall be paid exclusively to the Lessee.

(e) For purposes of subsections (a)(iii) and (d)(iii) above, first the Lessee shall receive reimbursement for any funds it has reasonably expended for repair and/or reconstruction of the Development (other than funds received from Lenders and/or Grantors). Second, the Lessor shall receive that portion of the remaining sum equal to such remaining sum, multiplied by a fraction the numerator of which is the number of years elapsed from the date of the Lease to the date of the taking, and the denominator of which is fifty-five (55). Third, the Lessee shall receive all remaining sums.

(f) The Lessee shall receive any award granted for or allocated to trade fixtures, moving expenses or loss of business.

(g) If the Development is taken or condemned during the last five (5) years of the Lease Term under circumstances described in subparagraph (a) above, then the Lessee may elect to terminate the Lease and proceeds of any payment or award shall be distributed in accordance with the provisions of subparagraphs (d) and (e) above.

Section 7.2 Administration of Construction Fund in the Event of Condemnation, or Damage or Destruction of Development.

If the Development or any part of it is to be repaired or reconstructed after damage or destruction or condemnation, then all proceeds collected under any and all policies of insurance referred to in Article 6 supra, covering such damage or destruction, or all compensation received for such taking by the exercise of the power of eminent domain, shall be paid into a special trust fund to be created and held by the Lessee and to be designated as the Construction Fund, during such repairing or reconstructing. Any surplus of such insurance or condemnation proceeds

remaining after the completion of all payments for such repairing or reconstructing shall be held or applied by the Lessee in a manner consistent with the applicable provision of this Article 7.

Section 7.3 Lessee, Lessor, Lenders and/or Grantors to be Made Parties in Legal Proceedings.

(a) In the event proceedings shall be instituted (i) for the exercise of the power of eminent domain, or (ii) as a result of any damage to or destruction of the Development, the resulting proceeds shall be paid to the Lenders and/or Grantors for application or disbursement in accordance with the Development Financing Documents (in the order of their respective lien priority, if there is more than one such Lender or Grantor). The Lessee, Lessor, and, as necessary, any Lender or Grantor with then-outstanding Development Financing shall be made parties to those proceedings, and if not made parties by the petitioning party, shall be brought into the proceedings by appropriate proceedings of other parties so that adjudication may be made of the damages, if any, to be paid to the Lessee, Lessor and Lenders and/or Grantors as compensation for loss of their rights in the Improvements or the Subject Property, or for damage to or destruction of the Development. Should the Lessor or Lessee receive notice of institution of any proceedings subject to Section 7.1, the Party receiving such notice shall notify the other Party not later than thirty (30) days after receiving such notice.

(b) The Lessor and the Lessee shall cooperate and consult with each other in all matters pertaining to the settlement, compromise, arbitration, or adjustment of any and all claims and demands for damages on account of damage to or destruction of the Development, or for damages on account of the taking or condemnation of the Improvements or the Subject Property.

Section 7.4 Termination.

In the event of a total taking or in the event of damage, destruction, or a partial taking, other than a temporary taking of the Development, which the Lessee reasonably determines renders continued operation of the Development infeasible both as a whole and in substantial part, and if the Lessee does not elect to rebuild the Development in accordance with the terms of this Lease, the Lessee shall terminate this Lease, and in such event any proceeds shall be allocated pursuant to Section 6.3 or Article 7, as appropriate. In the event of a partial taking that does not result in termination pursuant to this Section 7.4, this Lease shall remain in full force and effect as to the portion of the Development remaining.

ARTICLE 8.

REPRESENTATIONS AND ASSURANCES

Section 8.1 Lessor to Give Peaceful Possession.

Subject to the terms and conditions of this Lease, Lessee shall have, hold, and enjoy, during the Lease Term, peaceful, quiet, and undisputed possession of the Subject Property

without hindrance or molestation by or from Lessor so long as the Lessee is not in default under this Lease following the expiration of all applicable notice and cure periods.

Section 8.2 Lessor Representations.

The Lessor represents, as of the date of this Lease, as follows:

(a) it is unaware of any exceptions to title to the Subject Property except as set forth in the attached ***Exhibit B*** and as set forth herein;

(b) it has not received any notice of any special assessments or public improvements being contemplated, except as described in ***Exhibit C***;

(c) there is no pending, or, to the best of its knowledge, threatened condemnation or similar proceeding affecting the Subject Property, nor does the Lessor have any knowledge that any such action is contemplated;

(d) to the best of Lessor's knowledge, there are no legal actions or other legal proceedings pending or, to the best of the Lessor's knowledge, threatened against or affecting the Subject Property, or the Lessor's title to the Subject Property, including any zoning, land use or environmental matters, and there is no action, proceeding or investigation pending or, to the best of the Lessor's knowledge, threatened which questions, directly or indirectly, the validity or enforceability of this Lease or which individually, or in the aggregate, might adversely affect the construction, use, or occupancy of the Subject Property;

(e) there are no contracts to which the Lessor is a party or may be bound affecting the Subject Property, except those contracts listed on ***Exhibit C***, and to the best of the Lessor's knowledge, neither the Lessor nor any other party to such contracts is in default in the performance or observance of any of their provisions;

(f) all requisite action has been taken by the Lessor in connection with entering into this Lease and the consummation of the transactions contemplated by this Lease, and this Lease has been duly executed and delivered by the Lessor and constitutes the legally valid and binding obligation of the Lessor, enforceable against the Lessor in accordance with its terms except as the same may be affected by bankruptcy, insolvency, moratorium or similar laws, or by legal or equitable principles relating to or limiting the rights of contracting parties generally; and

(g) to the best of Lessor's knowledge, the execution of this Lease, the incurrence of the obligations set forth in this Lease, and the consummation of the transactions contemplated by this Lease do not violate any order or ruling of any court binding on the Lessor or any provision of any indenture, agreement, or other instrument to which the Lessor is a party or may be bound and to the best of the Lessor's knowledge, neither the entry into nor the performance of this Lease or the other documents contemplated in this Lease, has resulted or will result in any violation of, or conflict with, or invalidate, cancel or make inoperative, or result in the creation of any lien, encumbrance or any other charge upon the Subject Property pursuant to,

or constitute a default under, any charter, bylaw, partnership agreement, trust agreement, mortgage, deed of trust, indenture, contract, credit agreement, franchise, permit, judgment, decree, order, easement, restriction or other charge, right or interest applicable to the Lessor or the Development.

(h) where Lessor's representations are made based on Lessor's knowledge or to the best of Lessor's knowledge, or words of similar effect, said representations are based solely on the actual knowledge of Adam McGill, City Manager of the Lessor, without his having conducted any investigation or inquiry whatsoever. And the fact that such representations and warranties are made here by the Lessor shall not imply or indicate that any investigation or inquiry was performed by the Lessor in making same, and further, the fact that Lessor may not have conducted any such inquiry or investigation may not be relied upon by the Lessee as implying that no such investigation or inquiry should be made by the Lessee.

Section 8.3 Lessee Representations.

The Lessee represents, as of the date of this Lease, as follows:

(a) it is a nonprofit public benefit corporation duly organized, validly existing, and in good standing under the laws of the State of California;

(b) all requisite action has been taken by it in connection with entering into this Lease and the consummation of the transactions contemplated by this Lease, and this Lease has been duly executed and delivered by the Lessee and constitutes the legally valid and binding obligation of the Lessee, enforceable against the Lessee in accordance with its terms except as the same may be affected by bankruptcy, insolvency, moratorium or similar laws, or by legal or equitable principles relating to or limiting the rights of contracting parties generally;

(c) the execution of this Lease, the incurrence of the obligations set forth in this Lease, and the consummation of the transactions contemplated by this Lease do not violate any order or ruling of any court binding on the Lessee or any provision of any indenture, agreement or other instrument to which the Lessee is a party or may be bound, and neither the entry into nor the performance of this Lease or the other documents contemplated in this Lease has resulted or will result in the violation of, or conflict with, or invalidate, cancel or make inoperative, or constitute a default under, any charter, bylaw, partnership agreement, trust agreement, mortgage, deed of trust, indenture, contract, credit agreement, franchise, permit, judgment, decree, order, easement, restriction or other charge, right or interest applicable to the Lessee; and

(d) it has not employed or retained any real estate broker to solicit or secure this Lease, and it has not paid or agreed to pay any real estate broker any fee, commission, percentage, brokerage fee, gift, or any other consideration, contingent upon or resulting from the award or making this Lease.

(e) The Lessee acknowledges that the Lessee is not looking to or relying upon the Lessor to disclose any matters which the Lessor might be required to disclose under

California Health and Safety Code Section 25359.7 and that all such matters have been investigated by the Lessee to the Lessee's satisfaction. In this regard, the Lessee specifically waives any and all rights it may have pursuant to the provisions of California Health and Safety Code Section 25359.7.

Section 8.4 Release of Lessor.

The Lessor may sell, assign, transfer or convey all or any part of Lessor's interest in the Subject Property, reversionary interest in the Improvements, or this Lease without obtaining the Lessee's consent, as long as the purchaser, assignee, or transferee: (i) expressly assumes all of the obligations of the Lessor under this Lease by a written instrument in a form reasonably satisfactory to Lessee and recordable in the Official Records of the County of Marin; and (ii) executes necessary documentation to effect continued encumbrance of the fee interest in the Subject Property to Lenders and/or Grantors who have required encumbrance pursuant to Section 5.2 (b) above (to which encumbrance the Lessee has consented). In the event the Lessor intends to sell all or any part of the Subject Property, the Lessor shall notify the Lessee of such intention in writing not later than thirty (30) days before close of escrow. In the event of a sale, assignment, transfer or conveyance by the Lessor of the Subject Property or its rights under this Lease, the same shall operate to release the Lessor from any future liability upon any of the covenants or conditions of this Lease, expressed or implied, in favor of the Lessee, and in such event the Lessee shall look solely to the successor in interest of the Lessor in and to the Subject Property or this Lease. This Lease shall not be affected by any such sale or transfer, and the Lessee agrees to attorn to any such purchaser or assignee.

Section 8.5 Encumbrance by Lessor.

The Lessor shall not encumber or hypothecate its interest in the Subject Property or any part thereof with any mortgage, deed of trust, or other form of security interest, except as provided in Section 5.1(b) above with respect to Development Financing.

ARTICLE 9.

DEFAULTS AND REMEDIES

Section 9.1 Events of Default; Remedy for Default by Lessee.

(a) Any one or more of the following events shall constitute an "Event of Default":

(i) Failure to make any payment required hereunder, and continuance of such failure for a period of sixty (60) days after receipt by the Lessee of written notice specifying the nonpayment; or

(ii) Failure of the Lessee to observe and perform any other covenant, condition or agreement hereunder on its part to be performed (including, without limitation, the Performance Standards and compliance with

Section 4.1(a)), and continuance of such failure for a period of sixty (60) days after receipt by the Lessee of written notice specifying the nature of such default. If Lessee reasonably believes that more than sixty (60) days are required to remedy the violation, Lessee shall provide Lessor with a written notice stating the action proposed to remedy the violation and the reason why such remedy will require more than sixty (60) days. The Lessee shall also include in this written notice the soonest reasonable date by which the violation will be remedied. The Lessor shall not unreasonably withhold an additional period of up to sixty (60) additional days for Lessee to remedy the violation at issue. The Lessee may further seek to extend this period for an additional sixty (60) days, but the decision of whether or not to provide this additional sixty (60) days shall rest with the sole and absolute discretion of Lessor; or

(iii) The Lessee or its designee ceases to operate the Residential Component, the Training and Event Component or the Administrative Component for a continuous period of one hundred and eighty (180) days, subject to extension pursuant to the force majeure provisions of Section 10.4 below. For purposes of this section, Lessee shall be deemed to have ceased operating the Residential Component if the Lessee has less than 90% occupancy of the Residential Component of the Development for a one hundred eighty (180) day period subject to extensions of time for force majeure conditions. For purposes of this section, Lessee shall be deemed to have ceased operating the Training and Event Component if it is providing employment and job training services to an average of less than fifty (50) percent of the number of job training participants who received such services during an average month during the third year after a certificate of occupancy was issued by the City of Novato for the Development. For purposes of this section, Lessee shall be deemed to have ceased operating the Administrative Component if Lessee or its permitted subtenants are utilizing less than 50 percent of the square footage of the Administrative Component for administrative and office space for Lessee's operations. If the Lessee ceases to operate the Residential Component, the Training and Event Component or the Administrative Component as stated herein, the Lessor may terminate the Lease only as to the component of the Development that Lessee is deemed to have ceased operations. The Lessor and the Lessee shall then enter into a revised Lease for only those components still operated by Lessee. The Lessor may seek a new tenant for the component which Lessee has ceased to operate and/or operate the component on its own and/or take other actions regarding the component as the Lessor deems appropriate, consistent with the obligations included in Section 9.1 (e)below; or

(iv) A general assignment by the Lessee for the benefit of creditors; or

(v) The filing of a voluntary petition by the Lessee, or the filing of an involuntary petition by any of the Lessee's creditors, seeking the rehabilitation, liquidation or reorganization of the Lessee under any law relating to bankruptcy, insolvency or other relief of debtors, provided that in the case of an involuntary petition Lessee shall have sixty (60) days to cause such petition to be withdrawn or dismissed; or

(vi) The appointment of a receiver or other custodian to take possession of substantially all of the Lessee's assets or of this leasehold, which appointment is not withdrawn or dismissed within sixty (60) days, excluding any receivership initiated by a Lender or Grantor which shall not constitute an Event of Default; or

(vii) The Lessee becomes insolvent or declares in writing it is unwilling to pay its debts as they become due; or any court enters a decree or order directing the winding up or liquidation of the Lessee or of substantially all of its assets; or the Lessee takes any action toward the dissolution or winding up of its affairs or the cessation or suspension of its use of the Development; or

(viii) Attachment, execution or other judicial seizure of substantially all of the Lessee's assets or this leasehold, which is not dismissed, bonded, or stayed within sixty (60) days; or

(ix) Lessee's failure to comply with and/or violations of the City Conditions of Approval and continuance of such failure for a period of sixty (60) days after receipt by the Lessee of a written notice specifying the nature of such default; or

(x) Lessee's provision of written notice to Lessor that it has, or will, abandon the Property and cease to utilize the Property as veterans and workforce housing, employment and training.

(b) Whenever any default has occurred and is continuing following expiration of any applicable cure periods, and subject to the cure rights of Lenders and/or Grantors, an Event of Default shall exist, and the Lessor may take whatever action at law or equity as may appear reasonably necessary to enforce performance or observance of this Lease, including without limitation, termination of this Lease. In the event of an Event of Default, Lessor's remedies shall be cumulative, and no remedy expressly provided for in this section shall be deemed to exclude any other remedy allowed by law. Prior to any termination of this Lease due to an uncured Event of Default, Lessor shall consider consenting to an assignment of this Lease to a successor to the Lessee's interest in this Lease and to the rights and obligations conferred hereby selected in accordance with the terms of subsection 9.1(c) below, which consent shall not be unreasonably withheld. If a successor entity is selected pursuant to subsection 9.1(c) below, the Lessor shall not terminate the Lease, and shall instead consent to assignment of the Lease to the approved successor Lessee, and shall afford such successor Lessee a reasonable opportunity

to cure all curable Events of Default under the Lease. At Lessor's sole option and discretion, in the event a successor entity for the Residential Component and the Training and Event Component which meets the criteria contained in subsection 9.1(c) cannot be secured, Lessor may enter into a lease with one entity to operate the Residential Component and a separate lease with another entity to operate the Training and Event Component. The lease with each entity may contain such portion of the Administrative Component as the Lessor deems necessary for each entity to administer its component. Any portion of the Administrative Component not leased by Lessor to a successor entity shall be utilized by Lessor in any manner the Lessor deems appropriate.

(c) In evaluating any successor entity, nonprofit agencies meeting the following criteria shall be deemed eligible for priority consideration as a candidate for succession, provided that the nonprofit agency:

(i) Has substantial experience (preferably at least three (3) years) in operating and managing an affordable housing project, service enriched housing, or employment and training programs in the Bay Area. Alternatively, a nonprofit agency may provide a professional property management company to satisfy requirements for experience in operation of affordable housing and services pursuant to this section.

(ii) Is deemed to be fiscally sound (i.e. having sufficient committed financial resources to meet its current and projected obligations and having such financial reserves as deemed customary for nonprofit agencies with similar operations in Marin County), following a review of the nonprofit agency's audited financial statements for the last two (2) years, its financial statements for the then current fiscal year.

(d) In the event Lessor evicts Lessee for any of the reasons specified herein, upon obtaining possession of the Property, Lessor shall take appropriate action and utilize best efforts to select another operator, or operators, of the Development, to succeed to the rights and obligations contained in this Lease, in order to ensure the continued use of the Property as a veterans and workforce housing, employment and training center for the remainder of the Lease Term. If the Lessor is unable to secure another operator or operators to use the Property as a veterans and workforce housing, employment and training center, Lessor shall utilize the Property to provide other homeless services until such time as the need no longer exists or funding is no longer available.

Section 9.2 Remedy for Default by Lessor.

If the Lessor defaults under this Lease, then the Lessee shall give the Lessor and the Lenders and/or Grantors written notice requiring that the default be remedied by the Lessor. If the default is not cured within the time set forth by the Lessee (which shall be a reasonable time for curing the default and shall in any event be at least sixty (60) days), then the Lessee and Lenders and/or Grantors may take any action as may be necessary to protect their respective interests.

Section 9.3 Informal Mediation of Disputes.

(a) With respect to any alleged violation of the Performance Standards or any alleged violation of the requirements of this Lease by the Lessee or Lessor, either the Lessee or the Lessor may request that the matter be submitted to informal mediation with the Marin County Mediation Service (or, if either party objects, then to the mediation service of Sonoma County or another agreed county). At the request of either party, any third party complainant shall be asked to join the informal mediation and all parties shall use best efforts to cause the third party complainant to participate in the informal mediation. The informal mediation shall be conducted pursuant to the standard procedures of the mediation service and as directed by the mediator. The specific mediator shall be selected in the manner described in Section 9.4(b) below, with the administrator of the informal mediation service serving as the Administrator. The fees and cost of the informal mediation shall conform to the then-current fee schedule of the mediation service and, in the absence of an agreement to the contrary, will be borne equally by the parties.

(b) The informal mediation shall be completed within ninety (90) days of the request therefor unless the time is extended by written agreement of the Lessee and Lessor. If informal mediation has not been concluded within this ninety (90) day period, or such extended period agreed to by Lessor and Lessee, the informal mediation shall be deemed terminated and either the Lessor or the Lessee may seek the rights and remedies it believes itself entitled to pursuant to Section 9.1 of this Lease.

Section 9.4 Formal Mediation of Disputes.

(a) If informal mediation pursuant to Section 9.3 above does not resolve the dispute between Lessor and Lessee, either party, by providing written notice to the other within five (5) business days of the unsuccessful conclusion of the informal mediation, may initiate formal mediation before a retired judge or justice or through any other formal mediation process or service the parties may desire.

(b) Upon the initiation of formal mediation, the parties shall have ten (10) business days to select a mediator. If they are unable to do so, they shall mutually select a mediation service and the Administrator of such service will submit a list of three mediators and their resumes. Each party may then strike one name and the Administrator will designate the mediator from the list of remaining names. The fees and costs of the mediation will be borne equally by the parties.

(c) Mediation shall commence as expeditiously as possible and shall be completed within fifty (50) days of the date mediation, or thirty (30) days of the date a mediator is selected by the Parties pursuant to paragraph (b) above, whichever comes first. If mediation is not completed within the time specified herein, either party may terminate the mediation process upon written notice to the other and either the Lessor or the Lessee may then seek the rights and remedies it believes itself entitled to pursuant to Section 9.1 of this Lease.

(d) The mediation process is to be considered settlement negotiation for the purpose of all state and federal rules protecting disclosures made during such conferences from the later discovery or use in evidence. The parties hereto agree that the provisions of California Evidence Code Section 1152.5 shall apply to any mediation conducted hereunder.

ARTICLE 10.

MISCELLANEOUS

Section 10.1 Instrument Is Entire Agreement.

This Lease constitutes the entire agreement between the Parties with respect to the lease of the Subject Property. This Lease completely supersedes all prior understandings or agreements, both written and oral, between the Parties relating to the lease of the Subject Property.

Section 10.2 Notices.

(a) All notices hereunder shall be in writing signed by the Authorized Officer(s) and shall be sufficient if sent by United States first class, certified mail, postage prepaid, or express delivery service with a receipt showing the date of delivery, addressed

if to the Lessor:	City of Novato 922 Machin Ave Novato, CA 94945 Attention: City Manager
with a copy to:	City Attorney of the City of Novato 670 W. Napa Street Suite F Sonoma, CA 95476
if to the Lessee:	Homeward Bound of Marin 1385 N. Hamilton Parkway Novato, CA 94949 Attention: Executive Director

or any other address as either Party may have furnished to the other in writing pursuant to the requirements of this Section 10.2 as a place for service of notice. Any notice so mailed shall be deemed to have been given on the delivery date or the date that delivery is refused by the addressee, as shown on the return receipt, or within three business days of the date the notice was mailed, whichever is earlier. If notice is given by personal service, it shall be deemed to have been given on the date served on the person or entity identified in Section 10.2(a) of this lease.

(b) A copy of each notice of default sent under Section 10.2(a) shall also be sent, in the manner described in Section 10.2(a), to the Lenders and/or Grantors with an outstanding Loan which have been identified in writing to Lessor by Lessee.

Section 10.3 Non-Liability of Officials, Employees and Agents.

No member, official, officer, employee, agent, contractor, or volunteer of any party shall be personally liable to the other, or any successor in interest.

Section 10.4 Force Majeure.

Performance by either Party shall not be deemed to be in default where defaults are due to war; insurrection; strikes; lock-outs; riots; floods; earthquakes; fires; casualties; acts of God; acts of the public enemy; epidemics; power outages; quarantine restrictions; freight embargoes; governmental restrictions or priority; weather or soils conditions which, in the reasonable opinion of the Lessee's contractor, will necessitate delays; reasonable inability to secure necessary labor, reasonable materials or tools; or any other causes (other than the Lessee's inability to obtain financing for the Development) beyond the control or without the fault of the Party claiming an extension of time to perform. Times of performance under this Lease may also be extended in writing by the Lessor and the Lessee.

Section 10.5 Non-Waiver of Breach.

Neither the failure of a Party to insist upon strict performance of any of the covenants and agreements of this Lease nor the failure by the Party to exercise any rights or remedies granted to such Party under the terms of this Lease shall be deemed a waiver or relinquishment (a) of any covenant herein contained or of any of the rights or remedies of the applicable Party, (b) of the right in the future of the applicable Party to insist upon and to enforce by any appropriate legal remedy a strict compliance with all of the covenants and conditions thereof, or (c) the right of the Lessor to recover possession of the Subject Property upon occurrence of a default and the expiration of applicable notice and cure periods or the expiration of the Lease Term.

Section 10.6 Counterparts.

This Lease may be executed in counterparts and multiple originals, each of which shall be an original and all of which shall constitute the same instrument.

Section 10.7 Lease Binding on Successors.

This Lease shall inure to the benefit of, and shall be binding upon, the Lessor, the Lessee, and their respective permitted successors and assigns.

Section 10.8 Relationship of Parties.

Nothing contained in this Lease shall be deemed or construed by the Parties or by any third party to create the relationship of principal or agent; partnership; joint venture; association;

or buyer and seller. Neither the computation of any payments and other charges under the terms of this Lease nor any other provisions contained in this Lease, nor any act of the Parties, shall be deemed to create any relationship between the Parties other than the relationship of landlord and tenant.

Section 10.9 No Merger.

There shall be no merger of this Lease, or any interest in this Lease or of the leasehold estate created hereby, with the fee estate in the Subject Property by reason of the fact that this Lease or such interest may be directly or indirectly held by or for the account of any person who shall hold the fee estate in the Subject Property, or any interest in such fee estate; nor shall there be such a merger by reason of the fact that all or any part of the leasehold estate created hereby may be conveyed or mortgaged in a leasehold mortgage to a leasehold mortgagee who holds the fee estate in the Subject Property or any interest of the Lessor under this Lease.

Section 10.10 Titles.

Any titles of the sections or subsections of this Lease are inserted for convenience of reference only and shall be disregarded in interpreting any of its provisions.

Section 10.11 Severability.

If any provision of this Lease or the application of any provision to any person or circumstances shall be invalid or unenforceable to any extent, the remainder of this Lease, or the application of such provision to persons or circumstances other than those as to which it is invalid or unenforceable, shall not be affected, and each provision of this Lease shall be valid and be enforced to the fullest extent permitted by law.

Section 10.12 Applicable Law.

This Lease shall be governed by and construed in accordance with the laws of the State of California.

Section 10.13 Approvals.

(a) Unless expressly stated otherwise, whenever this Lease calls for a Party's approval, consent, or waiver, the written approval, consent, or waiver of the Party's Authorized Officer(s) shall constitute the approval, consent, or waiver of the Party, without further authorization required from the Party's board. The Parties hereby authorize their Authorized Officers to deliver such approvals or consents as are required by this Lease, or to waive requirements under this Lease, on behalf of them (including, in the case of the Lessor, to encumber the fee in the Subject Property pursuant to Section 5.2(b)).

(b) All approvals under this Lease shall be subject to a reasonableness standard, except where a sole discretion standard is specifically provided.

Section 10.14 Inspection of Books and Records.

The Lessor has the right at all reasonable times to inspect and copy the non-confidential books, records and all other documentation of the Lessee pertaining to its obligations under this Lease. The Lessee also has the right at all reasonable times to inspect and copy the books, records and all other documentation of the Lessor pertaining to its obligations under this Lease. Each Party shall maintain adequate records for a period of at least three (3) years after the end of the operating year in which the records were created.

Section 10.15 Recitals.

The recitals set forth above are hereby incorporated by this reference as though fully set forth herein.

BY SIGNING BELOW, the Parties confirm their agreement to the terms of this Lease as of the date first written above.

EXHIBIT A

DESCRIPTION OF THE SUBJECT PROPERTY

The land referred to is situated in the County of Marin, City of Novato, State of California, and is described as follows:

PARCEL ONE:

Beginning at the most Northerly corner of Lot 4 as shown on the Parcel Map of Hamilton Field - Phase Two, Stage 1, recorded November 3, 1997 in Book 26 of Parcel Maps at Page 39, Marin County Records; thence along the Easterly line of said Lot 4, South 05° 08' 16" West, 377.65 feet; thence leaving said Easterly line of said Lot 4, South 67° 31' 12" East, 81.00 feet; thence in a curve to the right, tangent to the preceding course, having a radius of 15.00 feet, through a central angle of 70° 47' 32", an arc length of 18.53 feet; thence South 03° 16' 20" West, 184.69 feet; thence South 84° 52' 00" East, 526.68 feet; thence South 05° 08' 00" West, 24.60 feet; thence South 84° 52' 00" East, 38.15 feet, thence South 05° 08' 00" West, 69.61 feet; thence South 84° 52' East, 245.46 feet; thence North 42° 01' 16" East, 47.80 feet to the Southwesterly line of the Parcel conveyed to Golden Gate Bridge, Highway and Transportation District described in the Deed recorded June 29, 1990 in Document No. 90-38197, Marin County Records; thence along said Southwesterly line of Golden Gate Bridge, Highway and Transportation District Parcel, North 47° 58' 44" West, 1166.25 feet to the Easterly line of North Hamilton Parkway, as shown on said Parcel Map of Hamilton Field - Phase Two, Stage 1 (26 P.M. 39); thence leaving said Southwesterly line of Golden Gate Bridge Highway and Transportation District Parcel, and along said Easterly line of North Hamilton Parkway, South 05° 08' 16" West, 43.85 feet to the point of beginning.

EXCEPTING THEREFROM that portion described as follows:

Beginning at the most Northerly corner of Lot 4 as shown on that certain Map entitled, "Parcel Map of Hamilton Field - Phase Two, Stage One", recorded November 3, 1997 in Book 26 of Parcel Maps at Page 39, Marin County Records; thence along the Easterly line of said Lot 4, South 05° 08' 16" West, 377.64 feet; thence leaving said Easterly line of said Lot 4, South 67° 31' 12" East, a distance of 81.00 feet; thence North 22° 28' 48" East, a distance of 34.33 feet; thence South 88° 25' 05" East, a distance of 74.65 feet; thence South 01° 34' 55" West, a distance of 14.50 feet; thence South 88° 25' 05" East, a distance of 102.19 feet; thence North 05° 08' 16" East, a distance of 113.56 feet; thence North 42° 01' 16" East, a distance of 83.20 feet to the Westerly line of the Lands of the Golden Gate Bridge, Highway and Transportation District (GGBH&TD), as described in Instrument No. 90 38197, Marin County Records; thence along said Westerly line of the Lands of GGBH&TD, North 47° 58' 44" West, a distance of 354.69 feet; thence leaving said Westerly line of the Lands of GGBH&TD from a tangent that bears South 65° 59' 11" West, along a non-tangent curve to the left, said curve having a radius of 261.00 feet, through a central angle of 08° 11' 38", for an arc length of 37.33 feet to the point of beginning.

ALSO EXCEPTING THEREFROM that portion described as follows:

Beginning at the most Northerly corner of Lot 4 as shown on that certain Map entitled, "Parcel Map of Hamilton Field - Phase Two, Stage One", filed for Record November 3, 1997 in Book 26

of Parcel Maps at Page 39, Marin County Records; thence along the Easterly line of said Lot 4, South 05° 08' 16" West, 377.64 feet; thence leaving said Easterly line of said Lot 4, South 67° 31' 12" East, a distance of 81.00 feet to the true point of beginning; thence from the true point of beginning along a tangent curve to the right; said curve having a radius of 15.00 feet; through a central angle of 70° 47' 32", for an arc length of 18.53 feet; thence South 03° 16' 20" West, a distance of 75.57 feet; thence South 84° 51' 44" East, a distance of 381.60 feet; thence North 42° 01' 16" East, a distance of 144.70 feet to the Westerly line of the Lands of the Golden Gate Bridge, Highway and Transportation District (GGBH&TD), as described in Instrument No. 90-38197, Marin County Records; thence along said Westerly line of the GGBH&TD, North 47° 58' 44" West, a distance of 304.88 feet; thence leaving said Westerly line of GGBH&TD, South 42° 01' 16" West, a distance of 83.20 feet; thence South 05° 08' 16" West, a distance of 113.56 feet; thence North 88° 25' 05" West, a distance of 102.19 feet; thence North 01° 34' 55" East, a distance of 14.50 feet; thence North 88° 25' 05" West, a distance of 74.65 feet; thence South 22° 28' 48" West, a distance of 34.33 feet to the point of beginning.

PARCEL TWO:

A Non-Exclusive Easement for the purpose of Vehicular access lying 12.50 feet on each side of the following described centerline:

Beginning at the most Northerly corner of Lot 4 as shown on that certain Map entitled, "Parcel Map of Hamilton Field - Phase Two, Stage One", recorded November 3, 1997 in Book 26 of Parcel Maps at Page 39, Marin County Records; thence along the Easterly line of said Lot 4, South 05° 08' 16" West, a distance of 6.87 feet, to the true point of beginning; thence from said true point of beginning leaving said Easterly line of said Lot 4 from a tangent that bears South 47° 39' 26" East, along a non-tangent curve to the right, said curve having a radius of 60.00 feet; through a central angle of 52° 47' 42", for an arc length of 55.29 feet; thence South 05° 08' 16" West, a distance of 255.99 feet; thence along a curve to the left; said curve having a radius of 60.00 feet, through a central angle of 64° 51' 05", for an arc length of 67.91 feet; thence South 59° 42' 49" East, a distance of 29.48 feet to a point on the Southerly line of Parcel One herein described; said point lies North 22° 28' 48" East, a distance of 24.45 feet from the most Southerly corner of said Parcel One and the terminus of the Easement herein being described.

PARCEL THREE:

A 25.00 foot Non-Exclusive Easement for the purpose of Vehicle access lying 12.50 feet on each side of the following described centerline:

Beginning at a point which bears North 22° 28' 48" West, a distance of 24.45 feet from the true point of beginning of the parcel herein described; thence from a tangent that bears South 59° 42' 49" East, along a non-tangent curve to the right, said curve having a radius of 40.00 feet; through a central angle of 18° 48' 22", for an arc length of 131.3 feet; thence South 40° 54' 27" East, a distance of 40.98 feet; thence along a curve to the left; said curve having a radius of 40.00 feet, through a central angle of 44° 13' 15", for an arc length of 30.87 feet; thence South 85° 07' 42" East, a distance of 262.04 feet; thence along a curve to the right; said curve having a radius of 40.00 feet, through a central angle of 41° 09' 19", for an arc length of 28.73 feet; thence South 43° 58' 23" East, a distance of 59.27 feet to a point on the Southeasterly line of Parcel One herein described; said point lying North 42° 01' 16" East, a

distance of 24.05 feet from the most Southerly corner of said Parcel One and the terminus of the Easement herein being described.

Homeward Bound
OF MARIN

BEFORE THE BOARD OF DIRECTORS OF HOMEWARD BOUND OF MARIN

IN THE MATTER OF: VETERAN HOUSING, HUD PARCEL, FORMER HAMILTON ARMY AIRFIELD, NOVATO, CA
RESOLUTION NO. 2
AUTHORIZATION TO APPLY FOR MARIN COUNTY IN-LIEU HOUSING TRUST FUNDS AND ENTER INTO A FUNDING AGREEMENT WITH THE COUNTY OF MARIN FOR DEVELOPMENT OF AFFORDABLE HOUSING FOR LOW AND VERY-LOW INCOME HOUSEHOLDS IN MARIN COUNTY

All of the directors of Homeward Bound of Marin, a California nonprofit corporation (the "Homeward Bound"), hereby consent to, adopt and ratify the following Resolution:

WHEREAS, the County of Marin ("County") has established the Marin County In-Lieu Housing Trust Fund ('Trust Fund") and accepts applications for funding on an ongoing basis; and

WHEREAS, Homeward Bound is authorized to do business in the State of California and is empowered to apply for and enter into a funding agreement to receive Trust Funds for the development affordable housing for low and very-low income households in Marin County; and

WHEREAS, Homeward Bound wishes to obtain a funding award of Trust Funds from the County for the development of Veteran Housing ("Project"), located on the HUD Parcel in the former Hamilton Army Airfield in the Novato, California; and

WHEREAS, Homeward Bound is an eligible applicant pursuant to the criteria set forth in the Trust Fund Application for Funding, and related materials.

NOW, THEREFORE, IT IS RESOLVED: That Homeward Bound is hereby authorized to submit an application for a funding award in an amount not to exceed **$500,000** for the Project pursuant to the Trust Fund Application for Funding, and related materials.

RESOLVED FURTHER: If the application is approved, Homeward Bound is hereby authorized to enter into, execute, and deliver an appropriate funding agreement with the County, and to provide any and all other documents required or deemed necessary or to carry into effect the full intent and purpose of this Resolution.

RESOLVED FURTHER: Homeward Bound is further authorized to request amendments, including increases in amounts up to amounts approved by the County, and to execute any and all documents required by the County relating to these amendments.

RESOLVED FURTHER: That Mary Kay Sweeney as the Executive Director of Homeward Bound, or her written designee, are each separate, individually, and independently hereby authorized to execute an application for a County funding award pursuant to the Trust Fund requirements, an appropriate funding agreement and, and any amendment or modifications thereto, on behalf of Homeward Bound.

RESOLVED FURTHER: That this Resolution shall take effect immediately upon its passage.

[ ] Families with Children

4a. Proposed Marketing Activities: Community Contacts Complete and submit Worksheet 2 to describe your use of community contacts to market the project to those least likely to apply.

4b. Proposed Marketing Activities: Methods of Advertising Complete and submit Worksheet 3 to describe your proposed methods of advertising that will be used to market to those least likely to apply. Attach copies of advertisements, radio and television scripts, Internet advertisements, websites, and brochures, etc.

4c. Marketing Program: Brochures, Signs, and HUD's Fair Housing Poster

(1) Will brochures, letters, or handouts be used to advertise? [x] Yes [ ] No If "Yes", attach a copy or submit when available.

(2) For development site sign, indicate sign size 10" x 8.5" ; Logo type size 1.125 x 2.5. Attach a photograph of sign or submit when available.

(3) HUD's Fair Housing Poster must be conspicuously displayed wherever sales/rentals and showings take place. Fair Housing Posters will be displayed in the:

[ ] Sales Office [ ] Real Estate Office [ ] Model Unit [✔] Other (specify)
Veteran Housing Program Office

5. Evaluation of Marketing Activities

Explain the evaluation process you will use to determine whether your marketing activities have been successful in attracting individuals least likely to apply, how often you will make this determination, and how you will make decisions about future marketing based on the evaluation process.

The success of our marketing activities will be measured by: 1. the diversity of applicants for the housing; and 2. the diversity of ways that that persons who are least likely to apply learn about the housing opportunity. The evaluation process will include analysis and collected information from the program intake application and process. In addition, information will be collected on the methods, locations, and frequency of affirmative marketing activities to determine most effective modalities.

The marketing plan will be reviewed on a quarterly to ensure that all steps promised during the time span are executed in a timely manner. If the quarterly review determines that the marketing plan, or any of the methods, locations, or frequency of activities is not effective or not optimal, changes will be made to improve effectiveness, and the plan will be revised and resubmitted to Marin County for approval.

6a. Marketing Staff

What staff positions are/will be responsible for affirmative marketing?

Deputy Executive Director, Paul Fordham; Executive Director, Mary Kay Sweeney; and Director of Housing and Operations, LaSaunda Tate and the New Beginnings Center Veterans Department. Affirmative marketing is a team effort. All of our departments will be involved in some capacity.

6b. Staff Training and Assessment: AFHMP

(1) Has staff been trained on the AFHMP? ☑ Yes ☐ No

(2) Has staff been instructed in writing and orally on nondiscrimination and fair housing policies as required by 24 CFR 200.620(c)? ☑ Yes ☐ No

(3) If yes, who provides instruction on the AFHMP and Fair Housing Act, and how frequently?

Leelee Thomas - Marin County, annually. Staff attorney, Fair Housing Advocates of Northern California, annually.

(4) Do you periodically assess staff skills on the use of the AFHMP and the application of the Fair Housing Act?

☑ Yes ☐ No

(5) If yes, how and how often?

Staff meet weekly with supervisors. Program managers meet weekly with the Leadership Team. Affirmative marketing and fair housing law and issues are discussed and assessed each week.

6c. Tenant Selection Training/Staff

(1) Has staff been trained on tenant selection in accordance with the project's occupancy policy?

☑ Yes ☐ No

(2) What staff positions are/will be responsible for tenant selection?

Homeward Bound participates in Marin County's Coordinated Entry process. Therefore, the Executive Deputy Director, Paul Fordham and the Director of Housing and Operations, LaSaunda Tate will be responsible for managing the tenant selection process with the county's coordinated entry team.

7. Additional Considerations:
Is there anything else you would like to tell us about your AFHMP to help ensure that your program is marketed to those least likely to apply for housing in your project? Please attach additional sheets, as needed.

In 2017, Homeward Bound adopted JEDI (Justice, Equity, Diversity, and Inclusion) principals into our everyday work and practices. Therefore, ensuring equal opportunity to our housing isn't just a requirement we must fulfill, but is a principle we believe and stand for. Given our JEDI practices, we take the AFHMP seriously; On April 15, 2021, Both our Director of Housing and Operations, LaSaunda Tate and our Director of Development, Corry Kanzenberg attended Fair Housing Advocates of Northern California's Affirmative Marketing Training. In addition to specific Affirmative Marketing Training, our staff continue to participate in fair housing related trainings to stay abreast of laws and best practices that ensure the most vulnerable have equal housing opportunity. Below are a list of trainings we have attended over the years.

4/29/21 - Virtual Fair Housing Conference,
3/23/21 - A Free Training for 504 Coordinators
2/25/21 - Successfully Housing People with Disabilities Conference
4/27/20 - Advancing Racial, Gender, and Economic Justice In This Moment of Crisis

8. Review and Update
By signing this form, the applicant/respondent agrees to implement its AFHMP, and to review and update its AFHMP in accordance with the instructions to item 9 of this form in order to ensure continued compliance with HUD's Affirmative Fair Housing Marketing Regulations (see 24 CFR Part 200, Subpart M). I hereby certify that all the information stated herein, as well as any information provided in the accompaniment herewith, is true and accurate. Warning: HUD will prosecute false claims and statements. Conviction may result in criminal and/or civil penalties. (See 18 U.S.C. 1001, 1010, 1012; 31 U.S.C. 3729, 3802).

INSTRUCTIONS:
Send completed form and worksheets to Leelee Thomas, Planning Manager: lthomas@marincounty.org

Part 1: Applicant/Respondent and Project Identification. Blocks 1a, 1b, 1e, 1f, and 1g are self-explanatory.

Block 1c- Respondents may obtain the Census tract number from the U.S. Census Bureau when completing Worksheet One. The Census tract number can be found here: https://geo map.ffiec.gov/FFIECGeocMap/GeocodeMap1.aspx

Block 1d- The applicant should complete this block only if a Managing Agent (the agent cannot be the applicant) is implementing the AFHMP.

Part 2: Type of AFHMP

Block 2a- Respondents should indicate the status of the AFHMP, i.e., initial or updated, as well as the date of the first approved AFHMP. Respondents should also provide the reason (s) for the current update, whether the update is based on the five-year review or due to significant changes in project or local demographics (See instructions for Part 9).

Block 2b- Respondents should identify all groups HUD has approved for occupancy in the subject project, in accordance with the contract, grant, etc.

Block 2c- Respondents should specify the date the project was/will be first occupied.

Block 2d- For new construction and substantial rehabilitation projects, advertising must begin at least 90 days prior to initial occupancy. In the case of existing projects, respondents should indicate whether the advertising will be used to fill existing vacancies, to place individuals on the project's waiting list, or to re-open a closed waiting list. Please indicate how many people are on the waiting list when advertising begins.

Part 3 Demographics and Marketing Area.

"Least likely to apply" means that there is an identifiable presence of a specific demographic group in the housing market area, but members of that group are not likely to apply for the housing without targeted outreach, including marketing materials in other languages for limited English proficient individuals, and alternative formats for persons with disabilities. Reasons for not applying may include, but are not limited to, insufficient information about housing opportunities, language barriers, or transportation impediments.

Block 3a - Using Worksheet 1, the respondent should indicate the demographic composition of the project's residents, current project applicant data,
census tract, housing market area, and expanded housing market area. The applicable housing market area and expanded housing market area should be indicated
in Block 1e. Compare groups within rows/across columns on Worksheet 1 to identify any under-represented group(s) relative to the surrounding housing market area and expanded housing market area, i.e., those group(s) "least likely to apply"
for the housing without targeted outreach and marketing. If there is a particular group or subgroup with members of a protected class that has an identifiable presence in the housing market area, but is not included in Worksheet 1, please specify under "Other."

Respondents should use the most current demographic data from the U.S. Census or another official source such as a local government planning office.

Block 3b - Using the information from the completed Worksheet 1, respondents should identify the demographic group(s) least likely to apply for the housing without special outreach efforts by checking all that

apply.

Part 4 - Marketing Program and Residency Preference (if any).

Block 4a - Using Worksheet 2, respondents should describe
their use of community contacts to help market the project to those least likely to apply. This table should include the name of a contact person, his/her address, telephone number, previous experience working with the target population(s), the approximate date contact was/will be initiated, and the specific role the community contact will play in assisting with affirmative fair housing marketing or outreach.

Block 4b - Using Worksheet 3, respondents should describe their proposed method(s) of advertising to market to those least likely to apply. This table should identify each media option, the reason for choosing this media, and the language
of the advertisement. Alternative format(s) that will be used to reach persons with disabilities, and logo(s) that will appear on the various materials (as well as their size) should be described.

Please attach a copy of the advertising or marketing material.

Part 5 – Availability of the Fair Housing Poster, AFHMP, and Project Site Sign.

Block 5a - The Fair Housing Poster must be prominently displayed in all offices in which sale or rental activity takes place (24 CFR 200.620(e)). Respondents should indicate all locations where the Fair Housing Poster will be displayed.

Block 5a continued -The AFHMP must be available for public inspection at the sales or rental office (24 CFR 200.625). Check all of the locations where the AFHMP will be available.
Project Site Sign must display in a conspicuous position the HUD-approved Equal Housing Opportunity logo, slogan, or statement (24 CFR 200.620(f)). Respondents should indicate where the Project Site Sign will be displayed, as well as the size of the Sign and the size of the logo, slogan, or statement. **Please submit photographs of project site signs.**

Part 6 - Evaluation of Marketing Activities.

Respondents should explain the evaluation process to be used to determine if they have been successful in attracting those individuals identified as least likely to apply. Respondents should also explain how they will make decisions about future marketing activities based on the evaluations.

Part 7- Marketing Staff and Training.

Block 7a -Respondents should identify staff positions that are/will be responsible for affirmative marketing.

Block 7b - Respondents should indicate whether staff has been trained on the AFHMP and Fair Housing Act. Please indicate who provides the training and how frequently.
In addition, respondents should specify whether they periodically assess staff members' skills in using the AFHMP and in applying the Fair Housing Act. They should state how often
they assess employee skills and how they conduct the assessment.

Block 7c - Respondents should indicate whether staff has been trained on tenant selection in accordance with the project's occupancy policy, including residency preferences (if any). Respondents should also identify those staff positions that are/will be responsible for tenant selection.

Part 8 - Additional Considerations.

Respondents should describe their efforts not previously mentioned that were/are planned to attract those

individuals least likely to apply for the subject housing.

Part 9 - Review and Update.

By signing the respondent assumes responsibility for implementing the AFHMP. Respondents must review their AFHMP every five years or when the local Community Development jurisdiction's Consolidated Plan is updated, or when there are significant changes in the demographics of the project or the local housing market area. When reviewing the plan, the respondent should consider the current demographics of the housing market area to determine if there have been demographic changes in the population in terms of race, color, national origin, religion, sex, familial status, or disability. The respondent will then determine if the population least to likely to apply for the housing is still the population identified in the AFHMP, whether the advertising and publicity cited in the current AFHMP are still appropriate, or whether advertising sources should be modified or expanded. Even if the demographics of the housing market area have not changed, the respondent should determine if the outreach currently being performed is reaching those it is intended to reach as measured by project occupancy and applicant data. If not, the AFHMP should be updated. The revised AFHMP must be submitted to HUD for approval. Staff may review whether the affirmative marketing is actually being performed in accordance with the AFHMP. If based on their review, respondents determine the AFHMP does not need to be revised, they should maintain a file documenting what was reviewed, what was found as a result of the review, and why no changes were required. Staff may review this documentation.

Worksheet 1: Determining Demographic Groups Least Likely to Apply for Housing Opportunities (See AFHMP, Block 3b)

In the respective columns below, indicate the percentage of demographic groups among the project's residents, current project applicant data, census tract, housing market area, and expanded housing market area. If you are a new construction or substantial rehabilitation project and do not have residents or project applicant data, only report information for census tract, housing market area, and expanded market area. The purpose of this information is to identify any under-representation of certain demographic groups in terms of race, color, national origin, religion, sex, familial status, or disability. If there is significant under-representation of any demographic group among project residents or current applicants in relation to the housing/expanded housing market area, then targeted outreach and marketing should be directed towards these individuals least likely to apply. Please indicate under-represented groups in Block 3b of the AFHMP. **Please attach maps showing both the housing market area and the expanded housing market area.**

Demographic Characteristics	Project's Residents	Project's Applicant Data	Census Tract
% White	N/A	N/A	Census Tract: 52% County Housing Market: 85.3%
% Black or African American	N/A	N/A	Census Tract: 8% County Housing Market: 2.8%
%Hispanic or Latino	N/A	N/A	Census Tract: 18% County Housing Market: 16.3%
% Asian	N/A	N/A	Census Tract: 11% County Housing Market: 6.6%
% American Indian or Alaskan Native	N/A	N/A	Census Tract: 0% County Housing Market: 1.0%
% Native Hawaiian or Pacific Islander	N/A	N/A	Census Tract: 0% County Housing Market: 0.3%
% Persons with Disabilities	N/A	N/A	Census Tract: 10% County Housing Market: 9.1%
% Families with Children under the age of 18	N/A	N/A	N/A
Other (specify)	N/A	N/A	N/A

Worksheet 2: Proposed Marketing Activities –Community Contacts (See AFHMP, Block 4a)

For each targeted marketing population designated as least likely to apply in Block 3b, identify at least one community contact organization you will use to facilitate outreach to the particular population group. This could be a social service agency, religious body, advocacy group, community center, etc. State the names of contact persons, their addresses, their telephone numbers, their previous experience working with the target population, the approximate date contact was/will be initiated, and the specific role they will play in assisting with the affirmative fair housing marketing. Please attach additional pages if necessary.

Targeted Population(s)	Community Contact(s), including required information noted above.
Black or African American	Marin City Development Corporation. Contact: Melissa Cadet, Ph.D., 441 Drake Ave., Marin City, CA 94965, 415-339-2837. Melissa has many decades of experience leading community organizations and helping clients achieve economic self-sufficiency. Inital contact made in 2014. Homeward Bound's program and executive leadership work with MCDC to ensure Marin City residents know about our program opportunities.
Hispanic or Latinx	Canal Alliance. Contact: Gloria Castillo, Housing Coordinator, 91 Larkspur St., San Rafael, CA 94901, 415-306-0434. Initial contact in 2014 with Bob Jackson. Bilingual with BA in social welfare/ethnic studies, Gloria has been with Canal Alliance for 8+ years, and will share our application information with Spanish speaking populations in Marin. Application information will also be shared with Community Action Marin.
Persons with Disabilities	LaSaunda Tate, Director of Housing and Operations for Homeward Bound, is also the agency 504 Coordinator, 1385 N. Hamilton Pkwy., Novato, CA 94949, 415-382-3363x210. LaSaunda works with Marin Center for Independent Living to ensure disabled persons, including seniors and veterans, are aware of Homeward Bound housing programs. In addition, we reach out to disabled homeless individuals via Whistlestop, St. Vincent de Paul Society, and County Health and Human Services.

Worksheet 3: Proposed Marketing Activities – Methods of Advertising (See AFHMP, Block 4b)

Complete the following table by identifying your targeted marketing population(s), as indicated in Block 3b, as well as the methods of advertising that will be used to market to that population. For each targeted population, state the means of advertising that you will use as applicable to that group and the reason for choosing this media. In each block, in addition to specifying the media that will be used (e.g., name of newspaper, television station, website, location of bulletin board, etc.) state any language(s) in which the material will be provided, identify any alternative format(s) to be used (e.g. Braille, large print, etc.), and specify the logo(s) (as well as size) that will appear on the various materials. Attach additional pages, if necessary, for further explanation. Please attach a copy of the advertising or marketing material.

Targeted Population(s) ⟶ **Methods of Advertising ↓**	**Targeted Population:** Elderly and Disabled	**Targeted Population:** Hispanic or Latinx	**Targeted Population:** Black or African American
Newspaper(s)	Vivalon (formerly Whistlestop) Express (Eng), monthly newspaper for older adults and persons with disabilities; Marin Independent Journal, primary newspaper in Marin County	; Marin Independent Journal, primary newspaper in Marin County	Marin Independent Journal, primary newspaper in Marin County
Radio Station(s)	KMWR (Eng), community radio in West Marin	KBBF 89.1 (Span/Eng) public radio for North Bay	N/A
TV Station(s)	Novato Community TV (Eng) public access, can place on-air notices; Marin Community TV (channels 26/27/30), public access, can place on-air notices/calendar via website	Marin Community TV (channels 26/27/30), public access, can place on-air notices/calendar in Spanish via website	Novato Community TV (Eng) public access, can place on-air notices; Marin Community TV (channels 26/27/30), public access, can place on-air notices/calendar via website

EXHIBIT A

The land referred to is situated in the County of Marin, City of Novato, State of California, and is described as follows:

PARCEL ONE:

Beginning at the most Northerly corner of Lot 4 as shown on the Parcel Map of Hamilton Field - Phase Two, Stage 1, recorded November 3, 1997 in Book 26 of Parcel Maps at Page 39, Marin County Records; thence along the Easterly line of said Lot 4, South 05° 08' 16" West, 377.65 feet; thence leaving said Easterly line of said Lot 4, South 67° 31' 12" East, 81.00 feet; thence in a curve to the right, tangent to the preceding course, having a radius of 15.00 feet, through a central angle of 70° 47' 32", an arc length of 18.53 feet; thence South 03° 16' 20" West, 184.69 feet; thence South 84° 52' 00" East, 526.68 feet; thence South 05° 08' 00" West, 24.60 feet; thence South 84° 52' 00" East, 38.15 feet, thence South 05° 08' 00" West, 69.61 feet; thence South 84° 52' East, 245.46 feet; thence North 42° 01' 16" East, 47.80 feet to the Southwesterly line of the Parcel conveyed to Golden Gate Bridge, Highway and Transportation District described in the Deed recorded June 29, 1990 in Document No. 90-38197, Marin County Records; thence along said Southwesterly line of Golden Gate Bridge, Highway and Transportation District Parcel, North 47° 58' 44" West, 1166.25 feet to the Easterly line of North Hamilton Parkway, as shown on said Parcel Map of Hamilton Field - Phase Two, Stage 1 (26 P.M. 39); thence leaving said Southwesterly line of Golden Gate Bridge Highway and Transportation District Parcel, and along said Easterly line of North Hamilton Parkway, South 05° 08' 16" West, 43.85 feet to the point of beginning.

EXCEPTING THEREFROM that portion described as follows:

Beginning at the most Northerly corner of Lot 4 as shown on that certain Map entitled, "Parcel Map of Hamilton Field - Phase Two, Stage One", recorded November 3, 1997 in Book 26 of Parcel Maps at Page 39, Marin County Records; thence along the Easterly line of said Lot 4, South 05° 08' 16" West, 377.64 feet; thence leaving said Easterly line of said Lot 4, South 67° 31' 12" East, a distance of 81.00 feet; thence North 22° 28' 48" East, a distance of 34.33 feet; thence South 88° 25' 05" East, a distance of 74.65 feet; thence South 01° 34' 55" West, a distance of 14.50 feet; thence South 88° 25' 05" East, a distance of 102.19 feet; thence North 05° 08' 16" East, a distance of 113.56 feet; thence North 42° 01' 16" East, a distance of 83.20 feet to the Westerly line of the Lands of the Golden Gate Bridge, Highway and Transportation District (GGBH&TD), as described in Instrument No. 90 38197, Marin County Records; thence along said Westerly line of the Lands of GGBH&TD, North 47° 58' 44" West, a distance of 354.69 feet; thence leaving said Westerly line of the Lands of GGBH&TD from a tangent that bears South 65° 59' 11" West, along a non-tangent curve to the left, said curve having a radius of 261.00 feet, through a central angle of 08° 11' 38", for an arc length of 37.33 feet to the point of beginning.

ALSO EXCEPTING THEREFROM that portion described as follows:

Beginning at the most Northerly corner of Lot 4 as shown on that certain Map entitled, "Parcel Map of Hamilton Field - Phase Two, Stage One", filed for Record November 3, 1997 in Book 26

of Parcel Maps at Page 39, Marin County Records; thence along the Easterly line of said Lot 4, South 05° 08' 16" West, 377.64 feet; thence leaving said Easterly line of said Lot 4, South 67° 31' 12" East, a distance of 81.00 feet to the true point of beginning; thence from the true point of beginning along a tangent curve to the right; said curve having a radius of 15.00 feet; through a central angle of 70° 47' 32", for an arc length of 18.53 feet; thence South 03° 16' 20" West, a distance of 75.57 feet; thence South 84° 51' 44" East, a distance of 381.60 feet; thence North 42° 01' 16" East, a distance of 144.70 feet to the Westerly line of the Lands of the Golden Gate Bridge, Highway and Transportation District (GGBH&TD), as described in Instrument No. 90-38197, Marin County Records; thence along said Westerly line of the GGBH&TD, North 47° 58' 44" West, a distance of 304.88 feet; thence leaving said Westerly line of GGBH&TD, South 42° 01' 16" West, a distance of 83.20 feet; thence South 05° 08' 16" West, a distance of 113.56 feet; thence North 88° 25' 05" West, a distance of 102.19 feet; thence North 01° 34' 55" East, a distance of 14.50 feet; thence North 88° 25' 05" West, a distance of 74.65 feet; thence South 22° 28' 48" West, a distance of 34.33 feet to the point of beginning.

PARCEL TWO:

A Non-Exclusive Easement for the purpose of Vehicular access lying 12.50 feet on each side of the following described centerline:

Beginning at the most Northerly corner of Lot 4 as shown on that certain Map entitled, "Parcel Map of Hamilton Field - Phase Two, Stage One", recorded November 3, 1997 in Book 26 of Parcel Maps at Page 39, Marin County Records; thence along the Easterly line of said Lot 4, South 05° 08' 16" West, a distance of 6.87 feet, to the true point of beginning; thence from said true point of beginning leaving said Easterly line of said Lot 4 from a tangent that bears South 47° 39' 26" East, along a non-tangent curve to the right, said curve having a radius of 60.00 feet; through a central angle of 52° 47' 42", for an arc length of 55.29 feet; thence South 05° 08' 16" West, a distance of 255.99 feet; thence along a curve to the left; said curve having a radius of 60.00 feet, through a central angle of 64° 51' 05", for an arc length of 67.91 feet; thence South 59° 42' 49" East, a distance of 29.48 feet to a point on the Southerly line of Parcel One herein described; said point lies North 22° 28' 48" East, a distance of 24.45 feet from the most Southerly corner of said Parcel One and the terminus of the Easement herein being described.

PARCEL THREE:

A 25.00 foot Non-Exclusive Easement for the purpose of Vehicle access lying 12.50 feet on each side of the following described centerline:

Beginning at a point which bears North 22° 28' 48" West, a distance of 24.45 feet from the true point of beginning of the parcel herein described; thence from a tangent that bears South 59° 42' 49" East, along a non-tangent curve to the right, said curve having a radius of 40.00 feet; through a central angle of 18° 48' 22", for an arc length of 131.3 feet; thence South 40° 54' 27" East, a distance of 40.98 feet; thence along a curve to the left; said curve having a radius of 40.00 feet, through a central angle of 44° 13' 15", for an arc length of 30.87 feet; thence South 85° 07' 42" East, a distance of 262.04 feet; thence along a curve to the right; said curve having a radius of 40.00 feet, through a central angle of 41° 09' 19", for an arc length of 28.73 feet; thence South 43° 58' 23" East, a distance of 59.27 feet to a point on the Southeasterly line of Parcel One herein described; said point lying North 42° 01' 16" East, a

distance of 24.05 feet from the most Southerly corner of said Parcel One and the terminus of the Easement herein being described.

APN: 157-970-07, Novato, CA 94945

In response to the above referenced application for a policy of title insurance, OLD REPUBLIC TITLE COMPANY, as issuing Agent of Old Republic National Title Insurance Company, hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a Policy or Policies of Title Insurance describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referred to as an Exception below or not excluded from coverage pursuant to the printed Schedules, Conditions and Stipulations of said policy forms.

The printed Exceptions and Exclusions from the coverage and Limitations on Covered Risks of said Policy or Policies are set forth in Exhibit I attached. The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than that set forth in the arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties. Limitations on Covered Risks applicable to the Homeowner's Policy of Title Insurance which establish a Deductible Amount and a Maximum Dollar Limit of Liability for certain coverages are also set forth in Exhibit I. Copies of the Policy forms should be read. They are available from the office which issued this report.

Please read the exceptions shown or referred to below and the exceptions and exclusions set forth in Exhibit I of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters which are not covered under the terms of the title insurance policy and should be carefully considered.
It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects, and encumbrances affecting title to the land.

This report (and any supplements or amendments hereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance, a Binder or Commitment should be requested.

Dated as of August 17, 2018, at 7:30 AM

OLD REPUBLIC TITLE COMPANY
For Exceptions Shown or Referred to, See Attached

The form of policy of title insurance contemplated by this report is:

CLTA Standard Coverage Policy - 1990. A specific request should be made if another form or additional coverage is desired.

The estate or interest in the land hereinafter described or referred or covered by this Report is:

Fee as to Parcel(s) One and an Easement as to Parcel(s) Two and Three

Title to said estate or interest at the date hereof is vested in:

City of Novato, a municipal corporation

The land referred to in this Report is situated in the County of Marin, City of Novato, State of California, and is described as follows:

PARCEL ONE:

Beginning at the most Northerly corner of Lot 4 as shown on the Parcel Map of Hamilton Field - Phase Two, Stage 1, recorded November 3, 1997 in Book 26 of Parcel Maps at Page 39, Marin County Records; thence along the Easterly line of said Lot 4, South 05° 08' 16" West, 377.65 feet; thence leaving said Easterly line of said Lot 4, South 67° 31' 12" East, 81.00 feet; thence in a curve to the right, tangent to the preceding course, having a radius of 15.00 feet, through a central angle of 70° 47' 32", an arc length of 18.53 feet; thence South 03° 16' 20" West, 184.69 feet; thence South 84° 52' 00" East, 526.68 feet; thence South 05° 08' 00" West, 24.60 feet; thence South 84° 52' 00" East, 38.15 feet, thence South 05° 08' 00" West, 69.61 feet; thence South 84° 52' East, 245.46 feet; thence North 42° 01' 16" East, 47.80 feet to the Southwesterly line of the Parcel conveyed to Golden Gate Bridge, Highway and Transportation District described in the Deed recorded June 29, 1990 in Document No. 90-38197, Marin County Records; thence along said Southwesterly line of Golden Gate Bridge, Highway and Transportation District Parcel, North 47° 58' 44" West, 1166.25 feet to the Easterly line of North Hamilton Parkway, as shown on said Parcel Map of Hamilton Field - Phase Two, Stage 1 (26 P.M. 39); thence leaving said Southwesterly line of Golden Gate Bridge Highway and Transportation District Parcel, and along said Easterly line of North Hamilton Parkway, South 05° 08' 16" West, 43.85 feet to the point of beginning.

EXCEPTING THEREFROM that portion described as follows:

Beginning at the most Northerly corner of Lot 4 as shown on that certain Map entitled, "Parcel Map of Hamilton Field - Phase Two, Stage One", recorded November 3, 1997 in Book 26 of Parcel Maps at Page 39, Marin County Records; thence along the Easterly line of said Lot 4, South 05° 08' 16" West, 377.64 feet; thence leaving said Easterly line of said Lot 4, South 67° 31' 12" East, a distance of 81.00 feet; thence North 22° 28' 48" East, a distance of 34.33 feet; thence South 88° 25' 05" East, a distance of 74.65 feet; thence South 01° 34' 55" West, a distance of 14.50 feet; thence South 88° 25' 05" East, a distance of 102.19 feet; thence North 05° 08' 16" East, a distance of 113.56 feet; thence North 42° 01' 16" East, a distance of 83.20 feet to the Westerly line of the Lands of the Golden Gate Bridge, Highway and Transportation District (GGBH&TD), as described in Instrument No. 90 38197, Marin County Records; thence along said Westerly line of the Lands of GGBH&TD, North 47° 58' 44" West, a distance of 354.69 feet; thence leaving said Westerly line of the Lands of GGBH&TD from a tangent that bears South 65° 59' 11" West, along a non-tangent curve to the left, said curve having a radius of 261.00 feet, through a central angle of 08° 11' 38", for an arc length of 37.33 feet to the point of beginning.

ALSO EXCEPTING THEREFROM that portion described as follows:

Beginning at the most Northerly corner of Lot 4 as shown on that certain Map entitled, "Parcel Map of Hamilton Field - Phase Two, Stage One", filed for Record November 3, 1997 in Book 26 of Parcel Maps at Page 39, Marin County Records; thence along the Easterly line of said Lot 4, South 05° 08' 16" West, 377.64 feet; thence leaving said Easterly line of said Lot 4, South 67° 31' 12" East, a distance of 81.00 feet to the true point of beginning; thence from the true point of beginning along a tangent curve to the right; said curve having a radius of 15.00 feet; through a central angle of 70° 47' 32", for an arc length of 18.53 feet; thence South 03° 16' 20" West, a distance of 75.57 feet; thence South 84° 51' 44" East, a distance of 381.60 feet; thence North 42° 01' 16" East, a distance of 144.70 feet to the Westerly line of the Lands of the Golden Gate Bridge, Highway and Transportation District (GGBH&TD), as described in Instrument No. 90-38197, Marin County Records; thence along said Westerly line of the GGBH&TD, North 47° 58' 44" West, a distance of 304.88 feet; thence leaving said Westerly line of GGBH&TD, South 42° 01' 16" West, a distance of 83.20 feet; thence South 05° 08' 16" West, a distance of 113.56 feet; thence North 88° 25' 05" West, a distance of 102.19 feet; thence North 01° 34' 55" East, a distance of 14.50 feet; thence North 88° 25' 05" West, a distance of 74.65 feet; thence South 22° 28' 48" West, a distance of 34.33 feet to the point of beginning.

PARCEL TWO:

A Non-Exclusive Easement for the purpose of Vehicular access lying 12.50 feet on each side of the following described centerline:

Beginning at the most Northerly corner of Lot 4 as shown on that certain Map entitled, "Parcel Map of Hamilton Field - Phase Two, Stage One", recorded November 3, 1997 in Book 26 of Parcel Maps at Page 39, Marin County Records; thence along the Easterly line of said Lot 4, South 05° 08' 16" West, a distance of 6.87 feet, to the true point of beginning; thence from said true point of beginning leaving said Easterly line of said Lot 4 from a tangent that bears South 47° 39' 26" East, along a non-tangent curve to the right, said curve having a radius of 60.00 feet; through a central angle of 52° 47' 42", for an arc length of 55.29 feet; thence South 05° 08' 16" West, a distance of 255.99 feet; thence along a curve to the left; said curve having a radius of 60.00 feet, through a central angle of 64° 51' 05", for an arc length of 67.91 feet; thence South 59° 42' 49" East, a distance of 29.48 feet to a point on the Southerly line of Parcel One herein described; said point lies North 22° 28' 48" East, a distance of 24.45 feet from the most Southerly corner of said Parcel One and the terminus of the Easement herein being described.

PARCEL THREE:

A 25.00 foot Non-Exclusive Easement for the purpose of Vehicle access lying 12.50 feet on each side of the following described centerline:

Beginning at a point which bears North 22° 28' 48" West, a distance of 24.45 feet from the true point of beginning of the parcel herein described; thence from a tangent that bears South 59° 42' 49" East, along a non-tangent curve to the right, said curve having a radius of 40.00 feet; through a central angle of 18° 48' 22", for an arc length of 131.3 feet; thence South 40° 54' 27" East, a distance of 40.98 feet; thence along a curve to the left; said curve having a radius of 40.00 feet, through a central angle of 44° 13' 15", for an arc length of 30.87 feet; thence South 85° 07' 42" East, a distance of 262.04 feet; thence along a curve to the right; said curve having a radius of 40.00 feet, through a central angle of 41° 09' 19", for an arc length of 28.73 feet; thence South 43° 58' 23" East, a distance of 59.27 feet to a point on the Southeasterly line of Parcel One herein described; said point lying North 42° 01' 16" East, a distance of 24.05 feet from the most Southerly corner of said Parcel One and the terminus of the Easement herein being described.

APN: 157-970-07

At the date hereof exceptions to coverage in addition to the Exceptions and Exclusions in said policy form would be as follows:

1. Taxes and assessments, general and special, for the fiscal year 2018 - 2019, a lien, but not yet due or payable.

2. NOTE: Said land was not assessed for Fiscal Year 2017-2018 Taxes (City Owned)

3. The lien of supplemental taxes, if any, assessed pursuant to the provisions of Section 75, et seq., of the Revenue and Taxation Code of the State of California.

4. Rights of the public, County and/or City, in and to that portion of said land lying within the lines of any Public Road.

5. Rights or claims of easements not recorded in the public records.

6. An easement affecting that portion of said land and for the purposes stated herein and incidental purposes as provided in the following

Granted To	:	Sanitary District No. 6 of Marin County
For	:	Sanitary Sewer purposes
Recorded	:	March 10, 1959 in Book 1261 of Official Records, Page 264
Affects	:	Along Northeasterly line, 10 feet in width

7. Amended Redevelopment Plan, as follows:

Entitled : Notice of Amendment to the Redevelopment Plan for Hamilton Field Redevelopment Project and Description of Land Within Added Area for Hamilton Field Redevelopment Project
Recorded : November 30, 1998 in Official Records under Recorder's Serial Number 1998-087749

And as modified by an instrument, executed by City of Novato, recorded January 25, 2002 in Official Records under Recorder's Serial Number 2002-006383.

"Notice of Adoption of First Amendment to the Redevelopment Plan for the Novato Redevelopment Project; First Amendment to Redevelopment Plan for the Downtown Novato Redevelopment Project; and Third Amendment to the Redevelopment Plan for the Hamilton Field Redevelopment Project", recorded June 10, 2003, as Instrument No. 2003-0068821, Marin County Records.

Revised Statement of Institution of Proceedings of Redevelopment dated November 13, 2007 and recorded December 3, 2007, as Instrument 2007-0067987 of Official Records.

8. Covenants, Conditions and Restrictions which do not contain express provision for forfeiture or reversion of title in the event of violation, but omitting any covenants or restriction if any, based upon race, color, religion, sex, handicap, familial status, or national origin unless and only to the extent that said covenant (a) is exempt under Title 42, Section 3607 of the United States Code or (b) relates to handicap but does not discriminate against handicapped persons, as provided in an instrument.

Recorded : September 28, 2001 in Official Records under Recorder's Serial Number 2001 0063240

Matters as contained or referred to in an instrument,

Entitled : Memorandum of Second Amendment to Homeless Facilities Agreement
Executed By : Marin Continuum of Housing, a California nonprofit public benefit corporation, the City of Novato, a municipal corporation, the Novato Public Finance Authority, a public body, corporate and politic, and Hamilton Reuse Planning Authority
Recorded : November 9, 2005 in Official Records under Recorder's Serial Number 2005-0085909

NOTE: "If this document contains any restriction based on race, color, religion, sex, sexual orientation, familial status, marital status, disability, national origin, source of income as defined in subdivision (p) of section 12955, or ancestry, that restriction violates state and federal fair housing laws and is void, and may be removed pursuant to Section 12956.2 of the Government Code. Lawful restrictions under state and federal law on the age of occupants in senior housing or housing for older persons shall not be construed as restrictions based on familial status."

9. Matters as contained or referred to in an instrument,

Entitled	:	Binding Agreement
Executed By	:	The City of Novato, a non-profit homeless assistance provider
Recorded	:	September 28, 2001 in Official Records under Recorder's Serial Number 2001 0063240

10. An easement affecting that portion of said land and for the purposes stated herein and incidental purposes as provided in the following

Granted To	:	North Marin Water District, a public corporation
For	:	Laying down, constructing, reconstructing, removing, replacing, repairing, maintaining, operating, and using Pipe or Pipes together with Right of Ingress and Egress
Recorded	:	December 19, 2003 in Official Records under Recorder's Serial Number 2003-0153200
Affects	:	Westerly portion

Terms and conditions contained in the Grant above referred to.

11. Any unrecorded and subsisting leases.

12. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.

13. The requirement that satisfactory evidence be furnished to this Company of compliance with applicable statutes, ordinances and charters governing the ownership and disposition of the herein described land.

---------- Informational Notes ----------

A. The applicable rate(s) for the policy(s) being offered by this report or commitment appears to be section(s) 1.1.

B. NOTE: The last recorded transfer or agreement to transfer the land described herein is as follows:

Instrument		
Entitled	:	Quitclaim Deed
By/From	:	City of Novato Public Finance Authority, a joint powers authority
To	:	City of Novato, a municipal corporation
Dated	:	March 8, 2011
Recorded	:	March 10, 2011 in Official Records under Recorder's Serial Number 2011-0013868

Exhibit I

CALIFORNIA LAND TITLE ASSOCIATION
STANDARD COVERAGE POLICY - 1990
EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building or zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or {iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien, or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.-

   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.

2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.

3. Defects, liens, encumbrances, adverse claims or other matters:

   (a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;

   (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;.

   (c) resulting in no loss or damage to the insured claimant;

   (d) attaching or created subsequent to Date of Policy; or

   (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage or for the estate or interest insured by this policy.

4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with the applicable doing business laws of the state in which the land Is situated.

5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.

6. Any claim, which arises out of the transaction vesting in the insured the estate of interest insured by this policy or the transaction creating the interest of the insured lender, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws.

EXCEPTIONS FROM COVERAGE - SCHEDULE B, PART I

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments Which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.

   Proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the public records.

2. Any facts, rights, interests, or claims Which are not shown by the public records but which could be ascertained by an inspection of the land which may be asserted by persons in possession thereof,

3. Easements, liens or encumbrances, or claims thereof, which are not shown by the public records.

4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.

5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the public records.

6. Any lien or right to a lien for services, labor or material not shown by the public records.

OLD REPUBLIC TITLE

rev. 07/2016

FACTS

WHAT DOES OLD REPUBLIC TITLE DO WITH YOUR PERSONAL INFORMATION?

Why?	Financial companies choose how they share your personal information. Federal law gives consumers the right to limit some but not all sharing. Federal law also requires us to tell you how we collect, share, and protect your personal information. Please read this notice carefully to understand what we do.
What?	The types of personal information we collect and share depend on the product or service you have with us. This information can include: • Social Security number and employment information • Mortgage rates and payments and account balances • Checking account information and wire transfer instructions When you are no longer our customer, we continue to share your information as described in this notice.
How?	All financial companies need to share customers' personal information to run their everyday business. In the section below, we list the reasons financial companies can share their customers' personal information; the reasons Old Republic Title chooses to share; and whether you can limit this sharing.

Reasons we can share your personal information	Does Old Republic Title share?	Can you limit this sharing?
For our everyday business purposes — such as to process your transactions, maintain your account(s), or respond to court orders and legal investigations, or report to credit bureaus	**Yes**	**No**
For our marketing purposes — to offer our products and services to you	**No**	**We don't share**
For joint marketing with other financial companies	**No**	**We don't share**
For our affiliates' everyday business purposes — information about your transactions and experiences	**Yes**	**No**
For our affiliates' everyday business purposes — information about your creditworthiness	**No**	**We don't share**
For our affiliates to market to you	**No**	**We don't share**
For non-affiliates to market to you	**No**	**We don't share**

Questions	**Go to www.oldrepublictitle.com** (Contact Us)

Who we are	
Who is providing this notice?	Companies with an Old Republic Title name and other affiliates. Please see below for a list of affiliates.

What we do	
How does Old Republic Title protect my personal information?	To protect your personal information from unauthorized access and use, we use security measures that comply with federal law. These measures include computer safeguards and secured files and buildings. For more information, visit http://www.OldRepublicTitle.com/newnational/Contact/privacy.
How does Old Republic Title collect my personal information?	We collect your personal information, for example, when you: • Give us your contact information or show your driver's license • Show your government-issued ID or provide your mortgage information • Make a wire transfer We also collect your personal information from others, such as credit bureaus, affiliates, or other companies.
Why can't I limit all sharing?	Federal law gives you the right to limit only: • Sharing for affiliates' everyday business purposes - information about your creditworthiness • Affiliates from using your information to market to you • Sharing for non-affiliates to market to you State laws and individual companies may give you additional rights to limit sharing. See the "Other important information" section below for your rights under state law.

Definitions	
Affiliates	Companies related by common ownership or control. They can be financial and nonfinancial companies. • Our affiliates include companies with an Old Republic Title name, and financial companies such as Attorneys' Title Fund Services, LLC, Lex Terrae National Title Services, Inc., Mississippi Valley Title Services Company, and The Title Company of North Carolina.
Non-affiliates	Companies not related by common ownership or control. They can be financial and non-financial companies. • Old Republic Title does not share with non-affiliates so they can market to you
Joint marketing	A formal agreement between non-affiliated financial companies that together market financial products or services to you. • Old Republic Title doesn't jointly market.

Other Important Information

Oregon residents only: We are providing you this notice under state law. We may share your personal information (described on page one) obtained from you or others with non-affiliate service providers with whom we contract, such as notaries and delivery services, in order to process your transactions. You may see what personal information we have collected about you in connection with your transaction (other than personal information related to a claim or legal proceeding). To see your information, please click on "Contact Us" at www.oldrepublictitle.com and submit your written request to the Legal Department. You may see and copy the information at our office or ask us to mail you a copy for a reasonable fee. If you think any information is wrong, you may submit a written request online to correct or delete it. We will let you know what actions we take. If you do not agree with our actions, you may send us a statement.

Transaction Management
Corporation, Inc.

February 28, 2019

Mr. Paul Fordham
Deputy Executive Director
Homeward Bound of Marin
1385 North Hamilton Parkway
Novato, California 94949

Subject: **Phase I Environmental Site Assessment**
Homeward Bound of Marin
826 State Access Road
Novato, California 94949
TMC Project No. 19-14057.00

Dear Mr. Fordham:

Please find enclosed one copy of the Phase I Environmental Site Assessment (ESA) report prepared by Transaction Management Corporation (TMC) for the referenced property. The following summarizes TMC's findings:

I. Project Identification

The Property is identified as "Homeward Bound of Marin" and is located at 826 State Access Road, in the City of Novato, Marin County, California. The Property is located in an area consisting predominantly of commercial and residential land uses. The Property is identified by the Marin County Assessor as Parcel Number (APNs) 157-970-07.

II. Property Use

The Property consists of an irregular-shaped parcel of land. A Property survey was not provided and as such, the exact lot dimensions and acreage is unknown. According to the Marin County Assessor's Office, it is believed to be approximately 2.3 acres in size. The Property is developed with three structures. The Property was developed with the current structures prior to 1952 and possibly was part of the Department of Defense (DoD) Housing Facility, former Hamilton Air Force Base (HAFB). Reportedly, the on-site operations include, automobile impounds and storage by the City of Novato Police Department (NPD) and costume and theater props storage by the City of Novato.

The historical use of the Property is summarized below:

1952 The 1952 aerial photograph shows the Property as developed with the current structures. In addition, a small structure appears to be located at the west corner of the Property. The adjacent parcels to the north, east and south appear to include structures resembling the on-site buildings (possibly military facility). The adjacent parcels to the west appear as undeveloped.

1963 The 1963 photo shows the Property as developed with the current structures (the small structure on the west corner is removed from the Property). The adjacent

parcels appear to remain essentially the same as they did in the 1952 aerial photograph.

1968 The 1968 photo shows the Property and adjacent parcels remain essentially the same as they appeared in the 1963 aerial photograph.

1970 The 1970 photo shows the Property and adjacent parcels remain essentially the same as they appeared in the 1968 aerial photograph.

1973 The 1973 photo shows the Property and adjacent parcels remain essentially the same as they appeared in the 1970 aerial photograph.

1982 The 1982 photo shows the Property and adjacent parcels remain essentially the same as they appeared in the 1973 aerial photograph.

1993 The 1993 photo shows the Property and adjacent parcels remain essentially the same as they appeared in the 1982 aerial photograph.

2006 The 2006 photo shows the Property and adjacent parcels remain essentially the same as they appeared in the 1993 aerial photograph.

2009 The 2009 photo shows the Property and adjacent parcels remain essentially the same as they appeared in the 2006 aerial photograph.

2012 The 2012 photo shows the Property and adjacent parcels remain essentially the same as they appeared in the 2009 aerial photograph. One of the structures on the adjacent parcels to the south appears to have been removed.

2016 The 2016 photo shows the Property and adjacent parcels remain essentially the same as they appeared in the 2012 aerial photograph.

III. Investigations

The scope of work for this ESA is in general accordance with the requirements of ASTM Standard E 1527-13. TMC warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the Scope of Work. These methodologies are described as representing good commercial and customary practice for conducting an Environmental Site Assessment of a property for the purpose of identifying recognized environmental conditions.

No specific limitations and exceptions to this ESA were encountered.

IV. Environmental Issues

On-site:

Based on the current and historical information available, there is a low potential that the Property has been impacted by the on-site operations. However, it is possible that the Property was affected by the off-site operations.

The suspect asbestos containing materials (ACM) were found to be in good condition at the time of the assessment with a low potential for disturbance. The suspect materials observed at the Property may be maintained through the provisions of an Operations and Maintenance (O&M) plan.

Off-site:

The Property was part of the Department of Defense (DoD) Housing Facility, former Hamilton Air

Force Base (HAFB). The DoD Housing Facility-Hamilton Square at 970 C Street was listed in the database. The DoD Housing Facility-Hamilton Square was reportedly, located approximately 1200 feet south-southeast of the Property. However, according to the case closure report the site was actually located northeast of the Property. Based on the Final Site Closure Report for No Further Action, prepared for the Former Department of Defense Housing Facility Novato by Battelle and dated September 9, 2016 methyl-tert-butyl-ether (MTBE) was detected in the groundwater samples collected from the Property between August 2003 and November 2005. However, MTBE was not detected in the groundwater samples collected between February 2006 and November 2011. The regulatory status for this facility is listed as "Open-Eligible for Closure as of 6/5/2018."

V. Recommendations/Additional Investigations

Based on the findings and conclusions of this assessment, TMC recommends no further investigations at the Property, at this time. However, TMC recommends the potential liabilities associated with the soil and groundwater contaminations to be evaluated by a legal attorney.

In addition, based on the age of the development and the limited scope of our asbestos survey TMC recommends that an O&M plan be prepared and implemented at the Property.

VI. Estimated Abatement and Remediation Costs

As no abatement or remediation measures have been recommended for the Property, no abatement or remediation costs are provided at this time.

The environmental assessment described herein was conducted by Dariush Dastmalchi under the direction of the undersigned. TMC's assessment was conducted in accordance with the Homeward Bound of Marin requirements and is subject to the Limitations and Service Constraints provided in the limitations section of this report and the Terms and Conditions of the Standard Consulting Services Agreement signed prior to initiation of the assessment.

Sincerely,

TRANSACTION MANAGEMENT CORPORATION

Managing Partner
Dariush Dastmalchi, R.E.P.A.

Novato, California 94949

This report has been prepared by the staff of Transaction Management Corporation, Inc. for Homeward Bound of Marin under the professional supervision of the principal and/or senior staff whose signatures appear hereon. Neither Transaction Management Corporation, Inc., nor any staff member assigned to this investigation has any interest or contemplated interest, financial or otherwise, in the subject or surrounding properties, or in any entity which owns, leases, or occupies the subject or surrounding properties or which may be responsible for environmental issues identified during the course of this investigation, and has no personal bias with respect to the parties involved.

The information contained in this report has received appropriate technical review and approval. The conclusions represent professional judgments founded upon the findings of the investigations identified in the report and the interpretation of such data based on our experience and expertise according to the existing standard of care. No other warranty or limitation exists, either expressed or implied.

This report was prepared for the sole use and benefit of Homeward Bound of Marin ("Homeward Bound of Marin") and its subsidiaries, affiliates, successors and assigns. Neither this report nor anything contained in this report shall be used or relied upon by anyone else without the express written consent of Homeward Bound of Marin. Homeward Bound of Marin makes no express or implied representation or warranty of any kind to anyone regarding this report and Homeward Bound of Marin expressly disclaims any liability of any kind to anyone with respect to this report. Any opinions, assumptions or conclusions contained in this report are solely those of the consultant, which prepared this report and not Homeward Bound of Marin.

Anyone seeking defenses to CERCLA liability must take independent action to perfect their position. Our firm does not now have, nor has it ever had, any affiliation, nor have we ever done any work for the buyer or seller of the Property to the best of our knowledge.

This is certified as true and correct to the best of my (our) knowledge. The above information is subject to penalty for false statements under 18 U.S.C. Section 1001.

TABLE OF CONTENTS

EXECUTIVE SUMMARY

Transaction Management Corporation (TMC) has performed a Phase I Environmental Site Assessment (ESA) in general accordance with the scope of work and limitations set forth by Homeward Bound of Marin for the Homeward Bound of Marin located at 826 State Access Road, Novato, California 94949.

The Phase I Environmental Site Assessment is designed to provide Homeward Bound of Marin with an assessment concerning environmental conditions (limited to those issues identified in the report), as they exist at the Property. This assessment was conducted utilizing generally accepted ESA industry standards in accordance with ASTM E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

The Property consists of a irregular-shaped parcel of land. A Property survey was not provided and as such, the exact lot dimensions and acreage is unknown. According to the Marin County Assessor's Office, it is believed to be approximately 2.3 acres in size. The Property is developed with three structures. The Property was developed with the current structures prior to 1952 and possibly was part of the Department of Defense (DoD) Housing Facility, former Hamilton Air Force Base (HAFB). Reportedly, the on-site operations include, automobile impounds and storage by the City of Novato Police Department (NPD) and costume and theater props storage by the City of Novato.

Based on the readily available information the Property was originally part of Hamilton Army Air Force (HAAF). The HAAF facility was constructed between 1932 and 1935 and encompassed approximately 927 acres. In 1947, the HAAF was transferred to the United States Air Force and was renamed Hamilton Air Force Base (HAFB). By 1964, additional housing to the west of the airfield increased the size of the HAFB to 2,184-acres. In 1974, the U.S. Air Force deactivated the facility and initiated transfer of excess area. The residential housing units were transferred to the Navy in 1975 as DoDHF-Novato, and the remaining area was transferred to various federal agencies.

The Property is located on the south side of Hamilton Parkway and north of State Access Road. Access to the Property is provided from Hamilton Parkway and State Access Road. Drainage is accomplished via sheet flow to storm drains located along the surrounding areas. No other structures or significant surface features were noted on the Property at the time of the reconnaissance. The Property is zoned PD (Planned District) by the City of Novato.

The Property is located in an area consisting predominantly of commercial and residential land uses. The vicinity of the Property can be described as: a parking area for multi tenant office buildings (1385 and 1399 North Hamilton Parkway) to the north; railroad tracks followed by a drainage canal and Hamilton Parkway to the east; an under construction structure and undeveloped land to the south; and undeveloped land followed by Nave Drive and Highway 101 to the west.

Conclusions

TMC has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-13 of a Property located at 826 State Access Road, Novato, California 94949. Any exceptions to or deletions from this practice are described in Section 1.4 of this report. This assessment has revealed no evidence of Recognized Environmental Conditions in connection with the Property.

On-site:

Based on the current and historical information available, there is a low potential that the Property has been impacted by the on-site operations. However, it is possible that the Property was affected by the off-site operations.

The suspect asbestos containing materials (ACM) were found to be in good condition at the time of the assessment with a low potential for disturbance. The suspect materials observed at the Property may be maintained through the provisions of an Operations and Maintenance (O&M) plan.

Off-site:

The Property was part of the Department of Defense (DoD) Housing Facility, former Hamilton Air Force Base (HAFB). The DoD Housing Facility-Hamilton Square at 970 C Street was listed in the database. The DoD Housing Facility-Hamilton Square was reportedly, located approximately 1200 feet south-southeast of the Property. However, according to the case closure report the site was actually located northeast of the Property. Based on the Final Site Closure Report for No Further Action, prepared for the Former Department of Defense Housing Facility Novato by Battelle and dated September 9, 2016 methyl-tert-butyl-ether (MTBE) was detected in the groundwater samples collected from the Property between August 2003 and November 2005. However, MTBE was not detected in the groundwater samples collected between February 2006 and November 2011. The regulatory status for this facility is listed as "Open-Eligible for Closure as of 6/5/2018."

1.0 INTRODUCTION

Transaction Management Corporation (TMC) was retained by Homeward Bound of Marin to conduct a Phase I Environmental Site Assessment (ESA) of a Property located at 826 State Access Road, Novato, California 94949. The protocol used for this assessment is in general conformance with ASTM E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

On January 15, 2019, Dariush Dastmalchi, a representative of TMC, conducted a site reconnaissance to assess the possible presence of petroleum products and hazardous materials at the Property. TMC's investigation included a review of aerial photographs, a reconnaissance of adjacent properties, background research, and a review of available local, state, and federal regulatory records regarding the presence of petroleum products and/or hazardous materials at the Property.

TMC contracted Environmental Data Resources (EDR), to perform a computer database search for local, state, and Federal regulatory records pertaining to environmental concerns for the Property and properties in the vicinity of the Property (see Section 3.0).

1.1 Purpose

The purpose of this Phase I Environmental Site Assessment (ESA) was to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E-1527-13) in connection with the Property. TMC understands that the findings of this study will be used by Homeward Bound of Marin to evaluate a pending financial transaction in connection with the Property.

1.2 Detailed Scope of Services

The scope of work for this ESA is in general accordance with the requirements of ASTM Standard E 1527-13. TMC warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the Scope of Work. These methodologies are described as representing good commercial and customary practice for conducting an Environmental Site Assessment of a property for the purpose of identifying recognized environmental conditions.

No other warranties are implied or expressed.

1.3 Significant Assumptions

There is a possibility that even with the proper application of these methodologies there may exist on the Property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. TMC believes that the information obtained from the record review and the interviews concerning the site is reliable. However, TMC cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The methodologies of this assessment are not intended to produce all inclusive or comprehensive results, but rather to provide Homeward Bound of Marin with information relating to the Property.

1.4 Limitations and Exceptions

The findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in ASTM 1527-13.

A User questionnaire was not provided. However, based on the available information, our site observations, and or information obtained from the other sources, the lack of User questionnaire does not represent a significant data gap and it is not expected to alter the conclusions of this report.

TMC was provided access to a small area in one of the structures. According to Mr. Paul Fordham the buildings are rented by City of Novato for theater costume storage and police automobile impoundment. Based on the available information, our site observations, and or information obtained from other sources, the lack of access to the units is not expected to alter the conclusions of this report.

1.5 Special Terms and Conditions

The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the client. No subsurface exploratory drilling or sampling was done under the scope of this work. Unless specifically stated otherwise in the report, no chemical analyses have been performed during the course of this ESA.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This is subject to the limitations of historical documentation, availability, and accuracy of pertinent records and the personal recollections of those persons contacted.

1.6 Reliance

Homeward Bound of Marin may rely upon this report to comply with planned future constructions at the Property. This report has no other purpose and should not be relied upon by any other person or entity

2.0 SITE DESCRIPTION

2.1 Location and Legal Description

The address of the Property is 826 State Access Road, Novato, California 94949. The Property is located in an area consisting predominantly of commercial and residential land uses. The Property is identified by the Marin County Assessor as Parcel Number (APNs) 157-970-07.

According to the Marin County Assessor's Office, the Property is owned by The City of Novato.

2.2 Property and Vicinity General Characteristics

The Property consists of an irregular-shaped parcel of land. A Property survey was not provided and as such, the exact lot dimensions and acreage is unknown. According to the Marin County Assessor's Office, it is believed to be approximately 2.3 acres in size. The Property is developed with three structures. The Property was developed with the current structures prior to 1952 and possibly was part of the Department of Defense (DoD) Housing Facility, former Hamilton Air Force Base (HAFB). Reportedly, the on-site operations include, automobiles impound and storage by the City of Novato Police Department (NPD) and costume and theater props storage by the City of Novato.

The Property is located on the south side of Hamilton Parkway and north of State Access Road. Access to the Property is provided from Hamilton Parkway and State Access Road. Drainage is accomplished via sheet flow to storm drains located along the surrounding areas. No other structures or significant surface features were noted on the Property at the time of the reconnaissance. The Property is zoned PD (Planned District) by the City of Novato.

The Property is located in an area consisting predominantly of commercial and residential land uses. The vicinity of the Property can be described as: a parking area for multi tenant office buildings (1385 and 1399 North Hamilton Parkway) to the north; railroad tracks followed by a drainage canal and Hamilton Parkway to the east; an under construction structure and undeveloped land to the south; and undeveloped land followed by Nave Drive and Highway 101 to the west.

2.3 Current Use of the Property

Reportedly, the on-site operations include, automobiles impound and storage by the City of Novato Police Department (NPD) and costume and theater props storage by the City of Novato.

2.4 Description of Property Improvements

The Property is developed with three structures. The Property was developed with the current structures prior to 1952 and possibly was part of the Department of Defense (DoD) Housing Facility, former Hamilton Air Force Base (HAFB). Reportedly, the on-site operations include, automobiles impound and storage by the City of Novato Police Department (NPD) and costume and theater props storage by the City of Novato.

The buildings appear to be wood frame construction on concrete foundations. The interior of the buildings consists of drywall and suspended ceiling tiles. The floors are partially covered with 9x9 floor tiles. The interior area of the building inspected, appeared to be in poor condition with extensive water damage.

According to Mr. Fordham the building will be demolished to allow for the new constructions.

The Property is connected to municipal utilities (sewer services and storm drainage). The electricity and natural gas are provided by PG&E. No other structures or significant surface features were noted on the Property at the time of the reconnaissance.

2.5 Current Use of Adjoining Properties

North: The parcels immediately adjacent to the north of the Property include: a parking area for multi tenant office buildings (1385 and 1399 North Hamilton Parkway).

East: The parcels immediately adjacent to the east of the Property include: railroad tracks followed by a drainage canal and Hamilton Parkway.

West: The parcels immediately adjacent to the west of the Property include: undeveloped land followed by Nave Drive and Highway 101.

South: The parcels immediately adjacent to the south of the Property include: an under construction structure and undeveloped land.

3.0 USER PROVIDED INFORMATION

Pursuant to ASTM E 1527-13, TMC requested the following site information from Homeward Bound of Marin (User of this report) and from the Key Property Manager.

3.1 Title Records

TMC requested title records from the User and Key Property Manager (Paul Fordham); however, title records were not available and were not provided to TMC for review. A User questionnaire was not provided.

Based on the available information, our site observations, and or information obtained from the other sources, the lack of title records does not represent a significant data gap and it is not expected to alter the conclusions of this report.

3.2 Environmental Liens or Activity and Use Limitation

TMC requested information from the User and Key Property Manager (Paul Fordham) regarding knowledge of environmental liens, activity and use limitations for the Property. The Property Manager was not aware of environmental liens, activity and use limitations for the Property.

A User questionnaire was not provided. However, based on the available information, our site observations, and or information obtained from the other sources, the lack of User questionnaire does not represent a significant data gap and it is not expected to alter the conclusions of this report.

3.3 Specialized Knowledge

TMC inquired with the User and Key Property Manager (Paul Fordham) regarding any specialized knowledge of environmental conditions associated with the Property. According to Mr. Fordham the building will be demolished to allow for the new constructions.

A User questionnaire was not provided. However, based on the available information, our site observations, and or information obtained from the other sources, the lack of User questionnaire does not represent a significant data gap and it is not expected to alter the conclusions of this report.

3.4 Commonly Known or Reasonably Ascertainable Information

TMC inquired with the User and Key Property Manager (Paul Fordham) regarding any commonly known or *reasonably ascertainable* information within the local community about the Property that is material to *recognized environmental conditions* in connection with the Property. Related information was not received prior to issuance of this assessment. The Property Manager was not aware of knowledge regarding any commonly known or *reasonably ascertainable* information within the local community about the Property that is material to *recognized environmental conditions* in connection with the Property.

A User questionnaire was not provided. However, based on the available information, our site observations, and or information obtained from the other sources, the lack of User questionnaire does not represent a significant data gap and it is not expected to alter the conclusions of this report.

3.5 Valuation Reduction for Environmental Issues

TMC inquired with the User and Key Property Manager, (Paul Fordham) regarding any knowledge of reductions in property value due to environmental issues. The Property Manager was not aware of reductions in property value due to environmental issues.

A User questionnaire was not provided. However, based on the available information, our site observations, and or information obtained from the other sources, the lack of User questionnaire does not represent a significant data gap and it is not expected to alter the conclusions of this report.

3.6 Owner, Property Manager, and Occupant Information

The following information regarding the Owner, Property Manager and Occupants was provided by the User and Key Property Manager.

Property Owner:	The City of Novato
Property Manager:	Paul Fordham
Occupants:	Automobile and costume storage by the City of Novato

3.7 Reason for Performing Phase I ESA

The purpose of this ESA was to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E-1527-13) in connection with the Property. This ESA was also performed to permit the *User* to satisfy one of the requirements to qualify for the *innocent landowner*, *contiguous Property Owner*, or *bona fide prospective purchaser* limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "*landowner liability protections*," or "*LLPs*"). ASTM Standard E-1527-13 constitutes "*all appropriate inquiry* into the previous ownership and uses of the Property consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

TMC understands that the findings of this study will be used by Homeward Bound of Marin to evaluate a pending financial transaction in connection with the Property.

4.0 RECORDS REVIEW

4.1 Standard Environmental Record Sources

Information from standard Federal and state environmental record sources was provided through Environmental Data Resources Inc. (EDR). Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. This integrated database also contains postal service data in order to enhance address matching. Records from one government source are compared to records from another to clarify any address ambiguities. The demographic and geographic information available provides assistance in identifying and managing risk. The accuracy of the geocoded locations is approximately +/-300 feet.

In some cases, location information supplied by the regulatory agencies is insufficient to allow the database companies to geocode facility locations. These facilities are listed under the unmappables (orphan sites) section within the EDR report. A review of the unmappable facilities indicated that none of these facilities are within the ASTM minimum search distance from the Property.

Regulatory information from the following database sources regarding possible recognized environmental conditions, within the ASTM minimum search distance from the Property, was reviewed. Specific facilities are discussed below if determined likely that a potential recognized environmental condition has resulted at the Property from the listed facilities. Please refer to Appendix C-1 for a complete listing.

Federal NPL

The National Priorities List (NPL) is the United States Environmental Protection Agency (EPA) database of uncontrolled or abandoned hazardous waste sites identified for priority remedial actions under the Superfund Program.

The Property is not listed as a NPL facility. No NPL sites are located within 1-mile of the Property.

Federal CERCLIS List

The Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) list is a compilation of sites that the EPA has investigated or is investigating for a release or threatened release of hazardous substances.

The Property is not listed as a CERCLIS facility. No CERCLIS site is listed within ½-mile of the Property.

Federal CERCLIS NFRAP Sites List

The CERCLIS No Further Remedial Action Planned (NFRAP) List is a compilation of sites that the EPA has investigated, and has determined that the facility does not pose a threat to human health or the environment, under the CERCLA framework.

The Property is not listed as a CERCLIS-NFRAP facility. No CERCLIS-NFRAP site is listed within ½-mile of the Property.

Federal Resource Conservation and Recovery Act (RCRA) CORRACTS Facilities List

The EPA Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA

Treatment, Storage and Disposal (TSD) database is a compilation by the EPA of reporting facilities that treat, store or dispose of hazardous waste. The CORRACTS database is the EPA's list of treatment storage or disposal facilities subject to corrective action under RCRA.

The Property is not listed as a RCRA CORRACTS site. No RCRA CORRACTS site is listed within 1-mile of the Property.

Federal Resource Conservation and Recovery Act (RCRA) Non-CORRACTS TSD Facilities List

The RCRA TSD database is a compilation by the EPA of reporting facilities that treat, store or dispose of hazardous waste.

The Property is not listed as a RCRA-TSD site. No RCRA TSD site is listed within ½-mile of the Property.

Federal RCRA Generator List

The RCRA program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Generators database is a compilation by the EPA of reporting facilities that generate hazardous waste.

One RCRA Generator facility is listed within ¼-mile of the Property. Novato Warehouse JTS painting at 803 State Access Road was located approximately 150 feet east southeast of the Property. No violation was noted for this facility. Based on the current regulatory status and absence of reported RCRA violations, there is a low potential that this facility has impacted the Property.

Federal Institutional Control/Engineering Control Registries

The Federal Institutional Control/Engineering Control Registries is a database used to record institutional controls, land use restrictions and engineering control requirements on contaminated propertied.

No Federal Institutional Control or Engineering Controls were listed within ½ mile from the Property.

Federal Emergency Response Notification System (ERNS)

The Emergency Response Notification System (ERNS) is a national database used to collect information on reported release of oil or hazardous substances.

The Property is not listed as ERNS facility. No ERNS facilities are listed within 1/8-mile of the Property.

RESPONSE

RESPONSE identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

The Property is not listed as RESPONSE Site. Three RESPONSE sites are listed within 1-mile of the Property.

- Hamilton GSA Phase I at Highway 101: 3 Mi N of Lucas Valley Road is reported as located approximately 430 feet north of the Property. Reportedly, contaminated soil

was excavated and removed from the facility in the 1990s as part of the HAFB closure process. Based on the distance, media affected and regulatory status, there is a low potential that this facility has impacted the Property.

- Dept. of Defense Housing Facility-Hamilton Square at 970 C Street was located approximately 1200 feet south-southeast of the Property (this facility was actually located northeast of the Property). Reportedly, the Remedial Action Completion Report is due by March 30, 2019. Based on the Final Site Closure Report for No Further Action prepared for the Former Department of Defense Housing Facility Novato by Battelle and dated September 9, 2016 methyl-tert-butyl-ether (MTBE) was detected in groundwater samples collected from the Property between August 2003 and November 2005. However, MTBE was not detected in the groundwater samples collected between February 2006 and November 2011. The regulatory status for this facility is listed as "Open-Eligible for Closure as of 6/5/2018."
- Hamilton GSA Phase II at Highway 101: 3 Mi N of Lucas Valley Road is reported as located approximately 1400 feet east-northeast of the Property. Reportedly, the five-year review reports are due by June 15, 2019. Based on the distance, media affected and regulatory status, there is a low potential that this facility has impacted the Property.

State/Tribal Sites (Envirostor)

The California Environmental Protection Agency, Department of Toxic Substances Control has developed an electronic database system with information about sites that are known to be contaminated with hazardous substances as well as information on uncharacterized properties where further studies may reveal problems. The Site Mitigation and Brownfields Reuse Program Database, also known as CalSites, is used primarily by DTSC's staff as an informational tool to evaluate and track activities at properties that may have been affected by the release of hazardous substances.

The Property is not listed as a State/Tribal (Envirostor) site. Eleven State/Tribal (Envirostor) sites are listed within 1-mile of the Property. The closest site, Hamilton GSA Phase I at Highway 101: 3 Mi N of Lucas Valley Road is reported as located approximately 430 feet north of the Property. This site was further discussed in the RESPONSE section above.

The remaining sites are located more than 900 feet from the Property. Based on the distance and or regulatory status, there is a low potential that these facilities have impacted the Property.

State Solid Waste/Landfill Facilities (SWLF)

A database of SWLF is prepared by California Integrated Waste Management Board.

The Property is not listed as a SWLF site. No SWLF site is listed within ½-mile of the Property.

State and Tribal Leaking Underground Storage Tank List (LUST)

The California Regional Water Quality Control Board compiles lists of all leaks of hazardous substances from underground storage tanks.

The Property was not listed as a LUST site. Three LUST sites are listed within ½-mile of the Property. The closest LUST facility, Super 7 at 5778 Redwood Highway is located more than 1300 feet west-northwest of the Property. The regulatory status for this facility is listed as "Post remedial action monitoring."

Based on the distance and or regulatory status, there is a low potential that these facilities have impacted the Property.

State and Tribal Underground Storage Tank List (UST)

The California Regional Water Quality Control Board compiles a list of UST locations.

The Property is not listed as UST facility. Two UST sites were listed within ¼-mile of the Property. These sites are not located adjacent to the Property. Based on the distance and or regulatory status, there is a low potential that these facilities have impacted the Property.

State Institutional Control Registries

The California Environmental Protection Agency, Department of Toxic Substances Control compiles a list of Institutional Controls.

The Property is not listed as having an Institutional Control. No Institutional Control site is listed within ½-mile of the Property.

State Voluntary Cleanup (VCP) Sites

The California Environmental Protection Agency, Department of Toxic Substances Control compiles a list of Voluntary Cleanup Sites.

The Property is not listed as a Voluntary Cleanup Site. No Voluntary Cleanup site is listed within ½-mile of the Property.

Spills, leaks, Investigation and Cleanup (SLIC)

The California Regional Water Quality Control Boards Region 1 through 9 maintains report of sites that have records of spills, leaks, investigations and cleanup.

The Property is not listed as a SLIC site. No SLIC site was listed within ½-mile of the Property.

DRYCLEANERS

The California Department of Toxic Substances Control maintains a list of registered dry-cleaning facilities.

The Property is not listed as a DRYCLEANERS facility. No DRYCLEANER facility was listed within ¼ mile of the Property.

EDR Historical Auto Station

The Property was not listed in the EDR Historical Auto Station database. No EDR Historical Auto Station facility was listed within ¼ mile from the Property.

EDR Historical Cleaners

The Property is not listed as an EDR Historical Cleaners facility. No EDR Historical Cleaners facilities were listed within 1/8-mile of the Property.

4.2 Additional Environmental Record Sources

4.2.1 County Recorder/ Assessor

Information regarding environmentally-related liens or easements was requested from the Marin County Assessor. The information was not readily available. Such

information requires a record search at the County Recorder. The Property is not listed on the California Department of Toxic Substances Deed Restrictions database in the EDR database report.

4.2.2 Fire/Police Officials

TMC requested the Novato Fire Department (SRFD) to provide information indicating the presence of underground storage tanks and for the use of hazardous materials at the Property. In addition, TMC requested the SRFD to provide information regarding documented incidents involving toxic releases, hazardous substances spill, and emergency response actions related to the release of petroleum products and/or hazardous substances, which may have occurred at the Property and/or adjacent properties.

The SRFD has no records for the Property. Reportedly, the Marin County Division of Waste Management is the Certified Unified Program Agency (CUPA) for the Property area.

4.2.3 Building Department

Records from Novato Building Department (SRBD) were reviewed for evidence indicating the developmental history of the Property, and for the presence of documentation relative to underground storage tanks. The records did not include information relating to the hazardous materials use or disposal at the Property.

4.2.4 Other Agencies

Marin County Department of Environmental Health (MCDEH)

TMC requested records from the Marin County Department of Environmental Health (MCDEH) for the Property. These records may contain evidence indicating current and/or historical hazardous materials usage, storage or releases, as well as the presence of USTs. Reportedly, the MCDEH has no record for the Property. Reportedly, the Marin County Division of Waste Management is the CUPA for the Property area.

Marin County Division of Waste Management

TMC requested records from the Marin County Division of Waste Management (MCDWM), for the Property and adjacent parcels. The MCDWM did not have any records for the Property or the adjacent addresses. However, TMC reviewed readily available records for the former HAFB. The records did not identify significant impact on the Property, from the operations at the former HAFB.

California Regional Water Quality Control Board

TMC researched the California Regional Water Quality Control Board (RWQCB) online database (GeoTracker) for information regarding any releases to the subsurface, which may have impacted or threatened a body of water. No records regarding a release on the Property were on file with the RWQCB. TMC reviewed the records for the Novato former UST site 957 at 957 C street in Novato. Based on the Final Site Closure Report for No Further Action prepared for the Former Department of Defense Housing Facility Novato by Battelle and dated September 9, 2016 methyl-tert-butyl-ether (MTBE) was detected in groundwater samples collected from the Property between August 2003 and November 2005. However, MTBE was not detected in the groundwater samples

collected between February 2006 and November 2011. The regulatory status for this facility is listed as "Open-Eligible for Closure as of 6/5/2018."

California Department of Toxic Substances Control

TMC researched the California Department of Toxic Substances Control (DTSC) online database (Envirostor) for information regarding any releases to the subsurface, which may have impacted or threatened a body of water. No records regarding a release on the Property were on file with the DTSC.

4.3 Physical Setting Sources

4.3.1 Topography

The United States Geological Survey (USGS), Novato, California Quadrangle 7.5-minute series topographic map was reviewed for this ESA. This map was published by the USGS in 2012. According to the contour lines on the topographic map, the Property is located at approximately 20-50 feet above mean sea level (MSL). The contour lines in the area of the Property indicate the area is sloping gently to the northeast.

The Property is depicted in a fully urbanized area. No surface water is depicted as present on or adjacent to the neither Property, nor are production wells or other significant surface features depicted on the USGS map.

4.3.2 Soils/Geology

The Property is located south of downtown Novato, nearly adjacent to U.S. Highway 101. Fill material and thick alluvial deposits (Bay Mud) underlie the Property area. Soils at the Property are composed of artificial fill, silty sand, clayey sand, and Bay Mud that extend more than 100 feet below ground surface (bgs). Shallow soils at the Property are mapped as Urban Land.

4.3.3 Hydrology

First groundwater occurs under unconfined or semi-confined conditions. Regional flow direction is estimated to be in a southerly direction, fluctuating from east to west. Local flow direction of shallow groundwater is likely variable and tidally influenced.

The direction and movement of groundwater through soil is dependent on soil type and the presence of structures and textures of underlying rocks. Fractures, faults, folds and foliation planes affect the movement of groundwater in rock. It is reasonable to assume that the direction of near surface groundwater flow under static conditions approximates the topography, however, this is not always so. Groundwater must be measured and monitored to determine definite flow direction.

Production wells or groundwater monitoring wells were not observed or reported at the Property. Furthermore, no settling ponds, lagoons, surface impoundments, wetlands, or natural drainage basins were observed at the Property. Drinking water is provided by the City of Novato from the Marin Municipal Water District. Surface water runoff enters several municipal storm drain grates in the asphalt surface at the Property.

Based on our review of the *Designated Sole Source Aquifers National Map*, published by the USEPA, the Property is not located in a sole source aquifer recharge area.

4.3.4 Flood Zone Information

According to the Flood Insurance Rate Maps (Panel Number 06041C0292E), published by the Federal Emergency Management Agency (FEMA), the Property is located in Zone X, Areas of Minimal Flood Hazard.

4.3.5 Oil and Gas Exploration

The California Division of Oil and Gas maps and records were researched for data regarding the presence of petroleum-producing properties and/or "wildcat" oil or gas wells in the site vicinity. No oil and gas wells were identified on the Property and in the immediate vicinity of the Property.

4.4 Historical Use Information on the Property

Based on the readily available information the Property was originally part of Hamilton Army Air Force (HAAF). The HAAF facility was constructed between 1932 and 1935 and encompassed approximately 927 acres. In 1947, the HAAF was transferred to the United States Air Force and was renamed Hamilton Air Force Base (HAFB). By 1964, additional housing to the west of the airfield increased the size of the HAFB to 2,184-acres. In 1974, the U.S. Air Force deactivated the facility and initiated transfer of excess area. The residential housing units were transferred to the Navy in 1975 as DoDHF-Novato, and the remaining area was transferred to various federal agencies.

4.4.1 Aerial Photographs

Available aerial photographs dated *1952, 1963, 1968, 1970, 1973, 1982, 1993, 2006, 2009, 2012 and 2016* from EDR were reviewed for this ESA. Copies of the photographs are included in Appendix B-1 of this report.

Date: 1952

Description: The 1952 aerial photograph shows the Property as developed with the current structures. In addition, a small structure appears to be located at the west corner of the Property. The adjacent parcels to the north, east and south appear to include structures resembling the on-site buildings (possibly military facility). The adjacent parcels to the west appear as undeveloped.

Date: 1963

Description: The 1963 photo shows the Property as developed with the current structures (the small structure on the west corner is removed from the Property). The adjacent parcels appear to remain essentially the same as they did in the 1952 aerial photograph.

Date: 1970

Description: The 1968 photo shows the Property and adjacent parcels remain essentially the same as they appeared in the 1963 aerial photograph.

Date: 1973

Description: The 1973 photo shows the Property and adjacent parcels remain essentially the same as they appeared in the 1970 aerial photograph.

Date: 1982

Description: The 1982 photo shows the Property and adjacent parcels remain essentially the same as they appeared in the 1973 aerial photograph.

Date: 1993

Description: The 1993 photo shows the Property and adjacent parcels remain essentially the same as they appeared in the 1982 aerial photograph.

Date: 2006

Description: The 2006 photo shows the Property and adjacent parcels remain essentially the same as they appeared in the 1993 aerial photograph.

Date: 2009

Description: The 2009 photo shows the Property and adjacent parcels remain essentially the same as they appeared in the 2006 aerial photograph.

Date: 2012

Description: The 2012 photo shows the Property and adjacent parcels remain essentially the same as they appeared in the 2009 aerial photograph. One of the structures on the adjacent parcels to the south appears to have been removed.

Date: 2016

Description: The 2016 photo shows the Property and adjacent parcels remain essentially the same as they appeared in the 2012 aerial photograph.

4.4.2 Fire Insurance Maps

TMC requested Sanborn Fire Insurance Maps for the Property. Reportedly, Sanborn maps were not published for the Property and adjacent parcels. Copy of the EDR report is included as an appendix to this report.

4.4.3 City Directories

TMC retained EDR to perform a search for the past names and business that were listed for the Property and adjoining properties. The findings are presented in the following table:

YEAR	ON-SITE	ADJOINING PROPERTIES
1975-2005	Not listing **826 State Access Road**	North – No Listing **(1385 and 1399 North Hamilton Parkway)** East –No Listing **(No address)** West – N Listing **(No address)** South – No Listing **(No address)**
2010	No listing **826 State Access Road**	North – Homeward Bound of Marin, Green Giant Construction, New beginnings Center

YEAR	ON-SITE	ADJOINING PROPERTIES
		(1385 and 1399 North Hamilton Parkway) East –No Listing **(No address)** West – No Listing **(No address)** South – No Listing **(No address)**
2014	No listing. **826 State Access Road**	North – Homeward Bound of Marin, Next Key Catering, Winslow Productions, Green Giant Construction, New Beginnings Center **(1385 and 1399 North Hamilton Parkway)** East – No listing **(No address)** West – No listing **(No address)** South – No Listing **(No address)**

4.4.4 Additional Historical Record Sources

Historical records were reviewed from the following sources during the course of this assessment: Novato Building and Planning Departments; Novato Fire Department; Marin County Division of Waste Management; Marin County Public Health Department; Marin County Assessor's offices; and State of California Regional Water Quality Control Board.

4.4.5 Historical Summary

The historical use of the Property is summarized below:

1952 The 1952 aerial photograph shows the Property as developed with the current structures. In addition, a small structure appears to be located at the west corner of the Property. The adjacent parcels to the north, east and south appear to include structures resembling the on-site buildings (possibly military facility). The adjacent parcels to the west appear as undeveloped.

1963 The 1963 photo shows the Property as developed with the current structures (the small structure on the west corner is removed from the Property). The adjacent parcels appear to remain essentially the same as they did in the 1952 aerial photograph.

1968 The 1968 photo shows the Property and adjacent parcels remain essentially the same as they appeared in the 1963 aerial photograph.

1970 The 1970 photo shows the Property and adjacent parcels remain essentially the same as they appeared in the 1968 aerial photograph.

1973 The 1973 photo shows the Property and adjacent parcels remain essentially the same as they appeared in the 1970 aerial photograph.

1982 The 1982 photo shows the Property and adjacent parcels remain essentially the same as they appeared in the 1973 aerial photograph.

1993 The 1993 photo shows the Property and adjacent parcels remain essentially the same as they appeared in the 1982 aerial photograph.

2006 The 2006 photo shows the Property and adjacent parcels remain essentially the same as they appeared in the 1993 aerial photograph.

2009 The 2009 photo shows the Property and adjacent parcels remain essentially the same as they appeared in the 2006 aerial photograph.

2012 The 2012 photo shows the Property and adjacent parcels remain essentially the same as they appeared in the 2009 aerial photograph. One of the structures on the adjacent parcels to the south appears to have been removed.

2016 The 2016 photo shows the Property and adjacent parcels remain essentially the same as they appeared in the 2012 aerial photograph.

4.4.6 Prior Assessment Reports

No previously prepared environmental reports such as Phase I or II Environmental Assessments, lead-based paint surveys, lead-in-water surveys, asbestos surveys or reports were provided for TMC's review.

4.5 Historical Use Information on Adjoining Properties

Based on the review of the standard historical sources referenced above, the historical uses of the adjoining properties are summarized below:

North: The adjacent parcels to the north were undeveloped, prior to the current developments.

East: The adjacent parcels to the east were undeveloped, prior to the current developments.

West: The adjacent parcels to the west were undeveloped, prior to the current developments.

South: The adjacent parcels to the south were undeveloped, prior to the current developments.

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

The Property was inspected by Dariush Dastmalchi on January 15, 2019. The weather at the time of the site visit was sunny with clear skies and ambient air temperatures in the 60 degrees Fahrenheit. Mr. Paul Fordham, a representative of the Property owner provided site access and accompanied TMC. The Property reconnaissance included visual inspection of industrial building and exterior inspection of the Property. Refer to Section 1.4 Limitations and Exceptions of this report for detailed information pertaining to site reconnaissance limitations.

5.2 General Property Setting

The Property is identified as "Homeward Bound of Marin" and is located at 826 State Access Road, in the City of Novato, Marin County, California. The Property is located in an area consisting predominantly of commercial and residential land uses.

The Property is developed with three structures. The Property was developed with the current structures prior to 1952 and possibly was part of the Department of Defense (DoD) Housing Facility, former Hamilton Air Force Base (HAFB). Reportedly, the on-site operations include, automobile impound and storage by the City of Novato Police Department (NPD) and costume and theater props storage by the City of Novato.

The Property is located on the south side of Hamilton Parkway and north of State Access Road. Access to the Property is provided from Hamilton Parkway and State Access Road. Drainage is accomplished via sheet flow to storm drains located along the surrounding areas. No other structures or significant surface features were noted on the Property at the time of the reconnaissance. The Property is zoned PD (Planned District) by the City of Novato.

5.3 Exterior Observations

5.3.1 Solid Waste Disposal

No solid waste is currently generated at the Property.

5.3.2 Surface Water Drainage

Storm water runoff is accomplished by sheet flow and is discharged into the municipal water management system. The Property is connected to a municipal owned and maintained sewer system.

No settling ponds, lagoons, surface impoundments, wetlands, or natural catch basins were observed on the Property during this investigation. No drywells were identified on the Property.

5.3.3 Wells and Cisterns

TMC did not observe evidence of or cistern at the Property. No aboveground evidence of a cistern was observed during the site reconnaissance.

5.3.4 Wastewater

Domestic wastewater is discharged to the municipal sanitary sewer system. The Marin Water District services the sanitary sewer needs at the Property and its vicinity. No indications of industrial wastewater generation, disposal or treatment facilities were observed during the onsite reconnaissance.

5.3.5 Additional Property Observations

No additional relevant general Property characteristics were observed.

5.4 Interior Observations

Interior construction materials include painted gypsum drywall, acoustical ceiling tiles and ceramic floor tiles. The interior of the building appeared in poor condition. According to Mr. Fordham, the buildings will be demolished, to allow for the new constructions at the Property.

5.5 Potential Environmental Conditions

5.5.1 Hazardous Materials and Petroleum Products Used or Stored at the Property

No significant quantities of hazardous materials and or petroleum products were note at the Property.

5.5.1.1 Unlabeled Containers and Drums

No unlabeled containers or drums were observed during the site reconnaissance.

5.5.1.2 Disposal Locations of Regulated/ Hazardous Waste

Reportedly no significant quantities of hazardous chemical are generated and or stored at the Property.

5.5.2 Evidence of Releases

No significant indications of hazardous material or petroleum product releases, such as stained areas or stressed vegetation, were observed during the site reconnaissance or reported during interviews.

5.5.3 Polychlorinated Biphenyls (PCBs)

Older transformers and other electrical equipment could contain polychlorinated biphenyls (PCBs) at a level that subjects them to regulation by the United States Environmental Protection Agency (EPA). PCBs in electrical equipment are controlled by the EPA regulations 40 CFR, Part 761.

TMC did not observe liquid cooled transformer at the Property. The Property does not include any elevator.

5.5.4 Landfills

No evidence of on-site landfilling was observed or reported during the site reconnaissance.

5.5.5 Pits, Ponds, Lagoons, Sumps, and Catch Basins

No evidence of on-site pits, ponds, lagoons was observed or reported during the site reconnaissance. No evidence of catch basins, other than used for storm water removal, was observed or reported during the site reconnaissance.

5.5.6 On-Property ASTs and USTs

No evidence of underground storage tank and ore aboveground storage tanks (ASTs) was observed during the Property reconnaissance.

5.5.7 Radiological Hazards

No radiological substances or equipment was observed or reported stored on the Property.

5.5.8 Drinking Water

The Property is connected to the city water supply provided by the Marin Water District (MWD). According to the Water Quality Report for the City of Novato, the drinking water supplied to the site is within state and federal standards, including lead and copper. Water sampling was not conducted at the site to verify water quality.

5.5.9 Additional Hazard Observations

No additional hazards were observed at the Property.

5.5.10 Asbestos-Containing Materials (ACM)

In accordance with the Scope of Services, TMC conducted a limited asbestos survey at the Property. The objective of this limited asbestos survey was to identify the readily visible materials for sampling and analysis (damaged or friable materials only) to determine the presence of asbestos containing material (ACM). The survey consisted of noting observable materials (materials which are readily accessible and visible in areas accessed by the inspector), which are commonly known to potentially contain asbestos. The limited asbestos survey was not designed to discover all sources of asbestos at the Property. Rather, it was primarily designed to assess the presence of friable and damaged non-friable ACM in the most significant (significant due to quantity, accessibility, or condition) potential asbestos sources observed at the Property. Additional sampling, inspection, and evaluation will be warranted for any other use.

The following table represents a summary of each suspect material, estimated quantity, friability, and physical condition.

SUSPECT ACM			
Suspect ACM	**Estimated Quantity of ACM (SF/LF)**	**Friable Yes/No**	**Physical Condition**
Drywall	Throughout	No	Good
Ceiling tiles	Throughout	No	Good
9x9 Floor tile	Throughout	No	Good

5.5.11 Radon

According to the United States Environmental Protection Agency (USEPA) Map of Radon Zones, the Property is located in an area (Zone 2) with moderate/variable potential for radon concentrations ranging from 2-4 picoCuries per liter of air (pCi/l). The USEPA's recommended action level for radon is 4 pCi/l. Therefore, no radon sample was collected from the Property.

5.5.12 Lead-Based Paint

Lead-based paint (LBP) is defined as any paint, varnish, stain, or other applied coating that has ≥1 mg/cm2 (5,000 µg/g or 5,000 ppm) or more of lead by federal guidelines; state and local definitions may differ from the federal definitions in amounts ranging from 0.5 mg/cm2 to 2.0 mg/cm2. Section 1017 of the Housing and Urban Development (HUD) Guidelines, Residential Lead-Based Paint Hazard Reduction Act of 1992, otherwise known as "Title X", defines a LBP hazard is "any condition that causes exposure to lead that would result in adverse human health effects" resulting from lead-contaminated dust, bare, lead-contaminated soil, and/or lead-contaminated paint that is deteriorated or present on accessible, friction, or impact surfaces. Therefore, under Title X, intact lead-based paint on most walls and ceilings would not be considered a "hazard", although the paint should be maintained and its condition and monitored to ensure that it does not deteriorate and become a hazard. Additionally, Section 1018 of this law directed HUD and EPA to require the disclosure of known information on lead-based paint and lead-based paint hazards before the sale or lease of most housing built before 1978. Most private housing, public housing, federally owned or subsidized housing is affected by this rule.

Painted surfaces at the Property were observed to be in poor condition at the time of the assessment with signs of chipping, flaking, peeling, or deteriorating areas. However, according to Mr. Fordham the buildings will be demolished, to allow for the new constructions at the Property.

5.5.13 Mold

TMC performed a limited visual inspection of interior areas of the Property for significant evidence of mold growth (see attached check list). This activity was not designed to discover all areas, which may be affected by mold growth on the Property. Rather, it was intended to give the client an indication if significant (area larger than 10 square feet) mold growth is present at the Property. As part of this investigation enclosed areas, such as pipe chases, heating ventilation and air-conditioning (HVAC) systems and behind enclosed walls and ceilings were not inspected. Homeward Bound of Marin has specifically recognized that, though the individual completing this inspection is a trained observer of real estate, recognizing, detecting, and measuring the presence of mold and microbial matter may be beyond the scope of her/his expertise and has agreed that neither the individual completing the inspection, nor Transaction Management Corporation has any liability for the identification of mold-related concerns except as defined in applicable industry standards.

TMC did not note significant visual or olfactory indications of the presence of mold. TMC noted evidence of significant water damage at the areas visually inspected.

5.5.14 Vapor Encroachment Conditions

The Property was part of the Department of Defense (DoD) Housing Facility, former Hamilton Air Force Base (HAFB). The DoD Housing Facility-Hamilton Square at 970 C Street was listed in the database. The DoD Housing Facility-Hamilton Square was reportedly, located approximately 1200 feet south-southeast of the Property. However, according to the case closure report the site was actually located northeast of the Property. Based on the Final Site Closure Report for No Further Action, prepared for the Former Department of Defense Housing Facility Novato by Battelle and dated September 9, 2016 methyl-tert-butyl-ether (MTBE) was detected in the groundwater samples collected from the Property between August 2003 and November 2005. However, MTBE was not detected in the groundwater samples collected between February 2006 and November 2011. The regulatory status for this facility is listed as "Open-Eligible for Closure as of 6/5/2018."

Based on the information available, it is possible that the Property was affected by the vapor encroachment from the off-site sources.

6.0 INTERVIEWS

Interviews were conducted with the following individuals. Findings from these interviews are discussed in the appropriate sections in this report.

6.1 Interview with Owner

TMC interviewed Mr. Paul Fordham, the owner of the Property.

6.2 Interview with Property Manager

Mr. Paul Fordham, the Key Property Manager 415-382-3363

6.3 Interview with Occupants

Mr. Paul Fordham 415-382-3363

6.4 Interview with Local Government Officials

- City of Novato Building Department
- City of Novato Planning Department
- City of Novato Fire Department
- Marin County Division of Waste Management
- Marin County Environmental Health Department
- Marin County Assessor

6.5 Interview with Others

No other personnel or sources were interviewed during the course of this assessment.

7.0 FINDINGS AND CONCLUSIONS

7.1 Findings

7.1.1 On-Property Environmental Conditions

Based on the current and historical information available, there is a low potential that the Property has been impacted by the on-site operations. However, it is possible that the Property was affected by the off-site operations.

The suspect asbestos containing materials (ACM) were found to be in good condition at the time of the assessment with a low potential for disturbance. The suspect materials observed at the Property may be maintained through the provisions of an Operations and Maintenance (O&M) plan.

7.1.2 Off-Property Environmental Conditions

The Property was part of the Department of Defense (DoD) Housing Facility, former Hamilton Air Force Base (HAFB). The DoD Housing Facility-Hamilton Square at 970 C Street was listed in the database. The DoD Housing Facility-Hamilton Square was reportedly, located approximately 1200 feet south-southeast of the Property. However, according to the case closure report the site was actually located northeast of the Property. Based on the Final Site Closure Report for No Further Action, prepared for the Former Department of Defense Housing Facility Novato by Battelle and dated September 9, 2016 methyl-tert-butyl-ether (MTBE) was detected in the groundwater samples collected from the Property between August 2003 and November 2005. However, MTBE was not detected in the groundwater samples collected between February 2006 and November 2011. The regulatory status for this facility is listed as "Open-Eligible for Closure as of 6/5/2018."

7.1.3 Recognized Environmental Conditions

A Recognized Environmental Condition (REC) is defined by the ASTM E1527-13 standard as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment."

No REC was identified in connection with the Property.

7.1.4 Historical Recognized Environmental Conditions

A Historical Recognized Environmental Condition (HREC) is defined by the ASTM E1527-13 standard as "a past release of any hazardous substances or petroleum products that has occurred in connection with the Property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the Property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

No HREC was identified in connection with the Property.

7.1.5 Controlled Recognized Environmental Conditions

A Controlled Recognized Environmental Condition (CREC) is defined by the ASTM E1527-13 standard as "a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

No CREC was identified in connection with the Property.

7.1.6 De Minimis Environmental Conditions

No *de minimis* environmental conditions were identified in connection with the Property during the course of this assessment, except for typical staining of asphalt pavement associated with automobile usage at this type of facility.

7.2 Opinion

Based on the current and historical information available, there is a low potential that the Property has been affected by the former on-site operations. However, the Property was possibly affected by the off-site operations.

7.3 Conclusions

TMC has performed a Phase I Environmental Property Assessment in conformance with the scope and limitations of ASTM Practice E 1527-13 of a Property located at 826 State Access Road, Novato, California 94949, the Property. Any exceptions to or deletions from this practice are described in Section 1.4 of this report.

This assessment has revealed no evidence of Recognized Environmental Conditions in connection with the Property.

7.4 Recommendations

Based on the findings and conclusions of this assessment, TMC recommends no further investigations at the Property, at this time. However, TMC recommends the potential liabilities associated with the soil and groundwater contaminations to be evaluated by a legal attorney.

In addition, based on the age of the development and the limited scope of our asbestos survey TMC recommends that an O&M plan be prepared and implemented at the Property.

7.5 Deviations

This Phase I ESA substantially complies with the scope of services and ASTM 1527-13, as amended, except for exceptions and/or limiting conditions as discussed in Section 1.4.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Transaction Management Corporation were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

EPA ID:: CAR000217703				

State- and tribal - equivalent NPL

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, has revealed that there are 3 RESPONSE sites within approximately 1 mile of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/29/2018 has revealed that there are 11 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 3 LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 4 UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Local Lists of Registered Storage Tanks

CERS TANKS: List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs.

A review of the CERS TANKS list, as provided by EDR, and dated 10/22/2018 has revealed that there are 3 CERS TANKS sites within approximately 0.25 miles of the target property.

Description:	Hamilton Army Airfield (HAAF) is located approximately four miles southeast of downtown Novato in Marin County, California. The installation property is bounded on the east by San Pablo Bay and on the west by U.S. Highway 101. Properties adjacent to HAAF include Base Realignment and Closure (BRAC) property to the east, Navy-operated military housing to the south and west, and State-owned land and a private residential community (Bel Marin Keys) to the north. Access to the site is from the Alameda Del Prado-U.S. 101 interchange to the south and the Ignacio Boulevard-U.S. 101 interchange to the north.
Current Program:	Not reported
History:	In 1937, the Army Air Corps constructed Hamilton Army Air Field for use as a base for fighter, bomber, and transport aircraft. The base served as a training field and staging area for Pacific operations during World War II. During the mid-1940s, the base hospital served as an acute care and rehabilitation facility for casualties. In 1974, the Department of Defense (DoD) declared the base surplus property and portions were considered for sale. The base closed in 1976.

Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Gasoline
Site History:	The site is a former Chevron service station located at the northwest corner of present day Nave Drive and Roblar Drive in Novato, California. The service station facilities were removed from the site

Actual:
35 ft.

FORMER CHEVRON SS #9-6151 (Continued) **S104793576**

in 1984. The site currently contains a bus stop and vacant land located adjacent to Union Pacific Railroad tracks. The former service station consisted of a station building, two dispenser islands, three gasoline underground storage tanks (USTs), and a 550-gallon waste oil UST. Environmental investigation and remediation has been ongoing since 1983. To date, 11 monitoring wells have been installed (six of which have been destroyed), seven soil borings have been advanced and soil vapor probes have been installed at two locations. In June 1983, during a tank tightness test, a leak was discovered in the product lines. In July 1983, Gettler-Ryan (G-R), on behalf of Chevron, installed groundwater monitoring wells 1 through 5. In February 1984, the station was closed and surface and subsurface facilities were removed. Groundwater monitoring continued through August 1984. Monitoring wells MW-1 through MW-3 were installed on the former site in 1998.

Comments:	A public notice announcing DTSC's intent to enter into a land use covenant with restrictions on the Site was published in the Marin

PACHECO PLAZA CLEANERS (Continued) **1004440969**

Independent Journal on June 29, 2018 .

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Soils Management Plan
Completed Date: 09/06/2018
Comments: The Soil Management Plan describes the procedures to be followed during disturbance of soil within the area of the Site affected by volatile organic compounds. The procedures described in the soil management plan include sampling and analysis and waste disposal requirements for any activities that would disturb the soil in the restricted area of the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Phase 1
Completed Date: 05/20/2016
Comments: GHD performed a Phase I Environmental Site Assessment to identify any environmental concerns and evaluate the business environmental risk of Pacheco Plaza Shopping Center. Pacheco Plaza One Hour Cleaners was identified as a recognized environmental condition during this assessment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 06/10/2016
Comments: GHD performed a Phase II Environmental Site Assessment at Building E of the Pacheco Plaza Shopping Center to determine if the Site was impacted by historical dry cleaning operations, based on the identification of Pacheco Plaza One Hour Cleaners as a recognized environmental condition during the Phase I Environmental Site Assessment. Groundwater samples and sub-slab vapor probe samples detected the presence of volatile organic compounds (VOCs) at the Site. Based on the results of sampling, GHD recommended further investigations to delineate the extent of VOCs and to evaluate any risk to human health and the environment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 03/30/2017
Comments: The Site Characterization Work Plan (Work Plan) was prepared to present the methodology for collection of soil, soil gas, and groundwater samples at the Site to determine the extent of volatile organic compounds (VOCs) present. In addition to the proposed sampling, the Work Plan outlined additional subsurface investigations with a video inspection of the sanitary sewer line and cone penetration testing.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 11/15/2016
Comments: The Air Monitoring and Analysis Work Plan was prepared to present the methodology for collecting air samples at the Site. It details the locations of where samples would be collected and what procedures

PACHECO PLAZA CLEANERS (Continued) **1004440969**

would be followed. The Work Plan proposed that four indoor air samples and three outdoor air samples be collected, and that two separate sampling events take place.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 09/11/2017
Comments: The Report was prepared to document the methods and results of air monitoring activities conducted at the Site to evaluate whether volatile organic compounds (VOCs) were present in indoor air. Samples were collected for indoor air and outdoor ambient air in winter and summer. No VOCs exceeded commercial/industrial screening levels, but trichloroethene and 1,2-dichloroethane exceeded the residential screening levels. Based on the results, it was recommended that no additional air monitoring be performed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 11/07/2017
Comments: The Report documents site characterization activities performed to evaluate concentrations of volatile organic compounds (VOCs) at the Site. Soil, soil gas, indoor air, and groundwater samples were collected and analyzed for VOCs in accordance with various workplans approved by DTSC. Based on the results of the cone penetration test, soil borings, and grab groundwater samples it was concluded that no further characterization of groundwater at the Site was necessary. The results of soil and soil gas sampling activities indicated that no further characterization of soil and soil gas at the Site was necessary at this time. There was an exceedance of the residential screening levels for trichloroethene and 1,2-dichloroethane in indoor air, but the concentrations were below commercial/industrial use screening levels. No other VOCs exceeded the residential screening levels. The Report concluded that the Site is suitable for continued commercial/industrial use, and recommended a Land Use Covenant to restrict residential and other sensitive uses at the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Voluntary Cleanup Agreement
Completed Date: 09/15/2016
Comments: Voluntary Cleanup Agreement signed between DTSC and the owners of the Pacheco Plaza Shopping Center for DTSC oversight of investigative activities and potential future remediation.

HAMILTON ARMY AIRFIELD PHASE II CONTRACT (Continued) **1007211875**

comments received on NDAI package submitted for project closure.

Description: Hamilton Army Airfield (HAAF) is located approximately four miles southeast of downtown Novato in Marin County, California. The installation property is bounded on the east by San Pablo Bay, the north by agricultural land, the south by BRAC property and on the west by U.S. Highway 101. The site is currently occupied by Navy and Lanham housing developments, Base Realignment and Closure (BRAC) property, the Novato School District, the U.S. Coast Guard, residential housing, industrial and commercial businesses, and the California Coastal Commission land consisting of coastal salt marshes. Access to the site is from the Alameda Del Pardon-U.S. 101 interchange to the south and the Ignacio Boulevard-U.S. 101 interchange to the north.

Current Program: Continued site maintenance and well monitoring at landfill-26. Completed draft final feasibility study and submitted it to state regulators for review and comments.NDAI package was submitted for MMRP project closure.

History: In 1932, Marin County sold approximately 2,000 acres to the federal government. The site was known as Hamilton Army Airfield and began operations in December 1932 as a base for fighter, bomber and transportation aircraft. In 1946, the government purchased 49 acres for the construction of the Rifle Range and the Pistol and Night Firing Range. The site was transferred to the newly created U.S. Air Force in 1947 and was renamed Hamilton Air Force Base. In 1959, an additional 218 acres were acquired for the construction and operation of the North Antenna Transmitter Field. Numerous disposals and transfers to other Government agencies occurred between 30 March 1961 and 1 October 1983. On 1 October 1983, 755 fee-acres were transferred to the Department of the Army. Of this acreage GSA disposed of 87.05 acres, known as Phase I, Tract 1, on 26 June 1995. The GSA also disposed of 27.26 acres, known as Phase 1, Tract 2, on 26 August 1996. Phase II, consisting of the remaining acreage to be disposed of, was transferred to the City of Novato in 1999. Both GSA Phases were developed for commercial and residential use.

Description:	Hamilton Army Airfield (HAAF) is located approximately four miles southeast of downtown Novato in Marin County, California. The installation property is bounded on the east by San Pablo Bay and on the west by U.S. Highway 101. Properties adjacent to HAAF include Base Realignment and Closure (BRAC) property to the east, Navy-operated military housing to the south and west, and State-owned land and a private residential community (Bel Marin Keys) to the north. Access to the site is from the Alameda Del Prado-U.S. 101 interchange to the south and the Ignacio Boulevard-U.S. 101 interchange to the north.
Current Program:	Not reported
History:	In 1937, the Army Air Corps constructed Hamilton Army Air Field for use as a base for fighter, bomber, and transport aircraft. The base served as a training field and staging area for Pacific operations during World War II. During the mid-1940s, the base hospital served as an acute care and rehabilitation facility for casualties. In 1974, the Department of Defense (DoD) declared the base surplus property and portions were considered for sale. The base closed in 1976.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

USGS TOPOGRAPHIC MAP

Target Property Map:	5602156 NOVATO, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

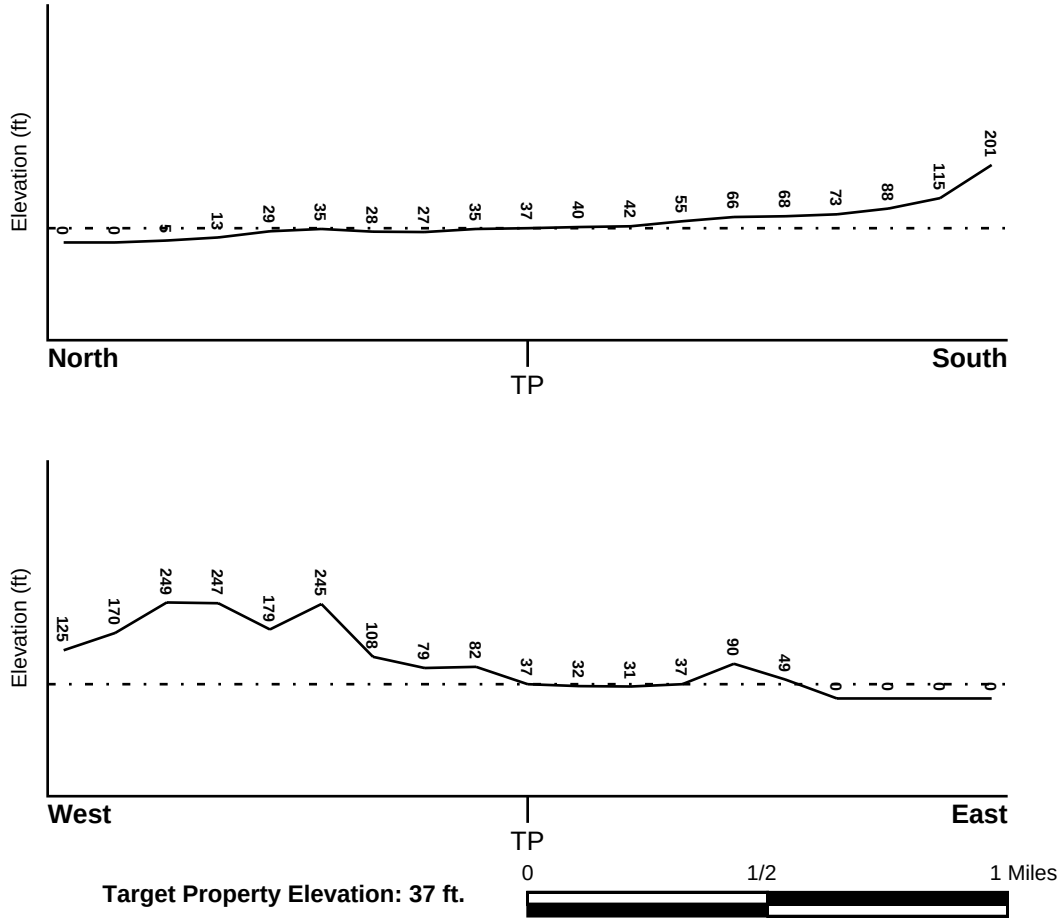
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 37 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06041C0292D	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type

06041C0291D	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
NOVATO	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
1	1/2 - 1 Mile WNW	NNW
1G	1/2 - 1 Mile WNW	NNW

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: XERORTHENTS

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: CORTINA

Soil Surface Texture: gravelly sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	gravelly sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILIS, Gravels, Clean Gravels, Well-graded gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel.	Max: 141 Min: 42	Max: 8.4 Min: 5.6
2	9 inches	44 inches	stratified very gravelly loamy sand to very gravelly loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILIS, Gravels, Clean Gravels, Well-graded gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel.	Max: 141 Min: 42	Max: 8.4 Min: 5.6
3	44 inches	59 inches	stratified very gravelly sand to very gravelly loamy sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILIS, Gravels, Clean Gravels, Well-graded gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel.	Max: 141 Min: 42	Max: 8.4 Min: 5.6

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

EXECUTIVE SUMMARY

Battelle has prepared this Closure Report for Former Underground Storage Tank (UST) Site 957/970 at Former Department of Defense Housing Facility (DoDHF), Novato, California under Environmental Services and Technologies Contract Number N62583-11-D-0515, Contract Task Order 093, administered by the U.S. Department of the Navy (Navy) Base Realignment and Closure (BRAC) Program Management Office (PMO) West. The Navy is submitting this document to request a no further action (NFA) decision for petroleum-related constituents in soil and groundwater associated with the Former UST Site 957/970 area.

Former UST Site 957/970 (the Site) DoDHF Novato, California, is located approximately 20 miles north of San Francisco in Marin County, California, and comprises an area of approximately 13 acres. The Site is the location of a former Navy Exchange (NEX) gas station and a former Naval Public Works Center (PWC) gas station that were in use from the mid-1970s to the early 1990s and operated USTs that stored gasoline. At the time the gas stations were closed, the three USTs that had supported the NEX gas station (UST 970-1, UST 970-2, and UST 970-3) and the single UST (UST 957) that had supported the PWC gas station were removed. Because groundwater at the site was thought to be impacted by fuel releases from both the NEX gas station and the PWC gas station, the respective site designations were merged and the label "Former UST Site 957/970" was adopted.

Remedial activities have been ongoing at the Site since characterization and source removal activities began in 1992. From 1998 to 2010, the Navy conducted in situ remediation in the former source area (1998-2009) and at the leading edge area (2009-2010) to treat petroleum hydrocarbons including benzene, toluene, ethylbenzene, xylenes (BTEX), total petroleum hydrocarbons (TPH) and methyl tert-butyl ether (MTBE). In addition, from 1998 to 2011, the Navy has conducted eight human health risk assessments throughout the environmental remediation process at the Site.

For the purposes of this report a risk-based screening evaluation was performed to determine potential risk from groundwater, soil, and soil gas based on the California Regional Water Quality Control Board, San Francisco Region (Water Board) *Low-Threat Underground Storage Tank Case Closure Policy* (Water Board, 2012). The results of the evaluation indicate that petroleum and petroleum constituents at the Site do not pose a significant risk to human health and the environment.

In October 2015, the Draft Site Closure Report requesting NFA was submitted to the Water Board and Department of Toxic Substances Control (DTSC). Through the regulatory review process, a data gap was identified for total petroleum hydrocarbons quantified as gasoline (TPH-G) data in groundwater. Specifically, the groundwater in the vicinity of Former UST Site 957 had not been analyzed for TPH-G since 2006. In an effort to address the TPH-G data gap, the Water Board requested that the Navy collect groundwater samples from monitoring wells within the vicinity of Former UST Site 957 and that these samples be analyzed for TPH-G. The Navy subsequently collected groundwater samples from eight monitoring wells in the Former UST 957 vicinity during the December 2015 annual groundwater sampling event to address the TPH-G data gap. The analytical results of the 2015 annual groundwater monitoring including the TPH-G data are presented in this Closure Report.

Multiple lines of evidence based on site-specific conditions presented in this Closure Report, and the results of the risk-based screening evaluation, support the Navy's position that the Site is a low threat to human health and the environment for petroleum and petroleum constituents. Therefore, the Navy requests NFA for petroleum and petroleum constituents at the Site.

Section 1.0: INTRODUCTION

Battelle has prepared this Closure Report for Former Underground Storage Tank (UST) Site 957/970 (the Site) at Former Department of Defense Housing Facility (DoDHF), Novato, California under Environmental Services and Technologies Contract Number N62583-11-D-0515 , Contract Task Order 093, administered by the U.S. Department of the Navy (Navy) Base Realignment and Closure (BRAC) Program Management Office (PMO) West. The Navy is submitting this document to request a no further action (NFA) decision for petroleum-related constituents associated with the Former UST Site 957/970 area.

1.1 Scope and Objectives

The scope and objectives of this Closure Report are as follows:

- Describe the geology, hydrogeology, and physical features of the Site
- Summarize past operations, investigations, remedial activities, and associated results
- Summarize the recently developed fate and transport groundwater model
- Evaluate the potential significance of residual levels of petroleum constituents in soil and groundwater at the site using a risk-based screening method
- Recommend NFA for petroleum constituents at the Site based on a multiple lines of evidence approach and the results of the risk-based screening evaluation.

1.2 Report Organization

This report is organized as follows:

- Executive Summary – summarizes the purpose of the Closure Report, overview of the work performed, results, and recommendation
- Section 1.0 (Introduction) – presents the purpose, scope, objectives, and organization of the report
- Section 2.0 (Site Background) – describes past site operations, geology, and hydrogeology
- Section 3.0 (Site Characterization and Remediation Activities) – discusses previous investigations, remedial activities, results, and the current fate and transport groundwater model
- Section 4.0 (Risk Evaluation) – describes screening criteria, data selection, evaluation methodology, and results
- Section 5.0 (Low-Risk Criteria Evaluation) – provides an assessment of low-risk determination
- Section 6.0 (Conclusions and Recommendations) – provides conclusions and significant findings and associated recommendations
- Section 7.0 (References) – lists documents cited in the text, tables, and figures
- Appendix A – Comprehensive Tabulated Groundwater Data

- Appendix B – Final 2014 Annual Site Status Report
- Appendix C – Letter from Marin County Department of Environmental Health Services
- Appendix D – Summary of Model Development and Results

The focus of this Closure Report is to provide the information needed to determine if the Site qualifies as a low-threat petroleum site as outlined in the California State Water Resources Control Board's *Low-Threat Underground Storage Tank Case Closure Policy* (Water Board, 2012), and should be recommended for closure with NFA.

Section 2.0: SITE BACKGROUND

This section summarizes the site history, regulatory framework in which past remedial activities have been implemented, institutional controls (ICs) associated with the Site, and the geology and hydrogeology of the Site.

2.1 Site Description

Former UST Site 957/970 DoDHF Novato, California, is located approximately 20 miles north of San Francisco in Marin County, California, and comprises an area of approximately 13 acres. The Site is the location of a former Naval Exchange (NEX) gas station and a former Naval Public Works Center (PWC) gas station that were in use from the mid-1970s to the early 1990s and operated USTs that stored gasoline. At the time the gas stations were closed, the three USTs that had supported the NEX gas station (UST 970-1, UST 970-2, and UST 970-3) and the single UST (UST 957) that had supported the PWC gas station were removed. Because groundwater at the site was thought to be impacted by fuel releases from both the NEX gas station and the PWC gas station, the respective site designations were merged and the label "Former UST Site 957/970" was adopted. A site location map depicting former UST Site 957/970 and the surrounding vicinity is provided in Figure 1. Pacheco Creek is the nearest surface water body, located approximately 800 ft northwest of the NEX gas station associated with Former UST Site 957/970 (Figures 1 and 2). Although the Navy continues to monitor petroleum constituents associated with former facilities, all former Navy property has been deemed suitable for transfer and is currently owned by the planned property recipients.

2.2 Site History and Tank Removal

The NEX gas station was located at the northwest corner of Main Entrance Road and C Street (Figure 2), where Building 970 and associated pump islands were in operation from the mid-1970s through the early 1990s. The NEX gas station was closed in the early 1990s and, subsequently, the three USTs supporting the station (970-1 [10,000-gallon UST], 970-2 [10,000-gallon UST], and 970-3 [10,000-gallon UST], collectively referred to as UST 970 complex) were excavated and removed from the site along with underlying and adjacent soil. The PWC gas station was located approximately 700 ft north of the NEX gas station and was the site of UST 957 (12,000-gallon UST), which was removed along with its associated underground piping and underlying/adjacent soil in 1992.

2.3 Regulatory Framework

The U.S. Navy is the lead agency administrating the remediation and closure of the Site, and it is Department of Defense (DoD) policy to achieve site closure with the agreement of local regulatory authorities. Because the source of gasoline constituents was a UST hydrocarbon release, the Regional Water Quality Control Board (Water Board) is the local regulatory authority with which this project has been coordinated. The California Department of Toxic Substances Control (DTSC) is involved as the lead state agency for closing former military installations and has oversight concerning risk assessment activities at the Site.

On July 19, 2000, the Water Board adopted Order 00-064 establishing a series of tasks (1 through 9) to be performed at the Site and a schedule by which those tasks would be performed to remediate petroleum constituents present at the Site. In response, the Navy developed a remedial approach to address source area contamination and effectively control the migration of methyl tert-butyl ether (MTBE) off Navy property, which was provided in the initial Corrective Action Plan (CAP)

(Battelle, 2002a) for Former UST Site 957/970. To date, the Navy has successfully completed all tasks associated with Order 00-064, as summarized in Table 1.

Tasks 1 and 2 required that a work plan for a remedial investigation (RI) be developed and implemented at the Site. A work plan for RI sampling was developed and sampling was performed in 2000, with the RI Report being issued in 2001 (Battelle, 2001a). The purpose of the RI was to gather additional data to augment historical data that existed at the time, and to fill data gaps so that the vertical and horizontal extent of petroleum constituents in soil and groundwater was adequately defined. During the RI soil sampling activities, a total of 40 soil borings were advanced in and around the NEX and PWC source areas, with shallow and deep samples generally being collected from each boring. Samples were analyzed for MTBE, benzene, ethylbenzene, toluene, xylenes (BTEX), total petroleum hydrocarbons quantified as gasoline (TPH-G), and total petroleum hydrocarbon quantified as diesel (TPH-D). Concentrations of petroleum constituents detected in soil samples were reported in the RI Report (Battelle, 2001a) and were assessed in the Final Revised Risk Assessment (Battelle, 2001b). The RI Report concluded that, due to the limited extent and degree of hydrocarbon-impacted soils at the Site, no additional treatment or removal of soils was necessary. Potential exposure to petroleum hydrocarbons in soil was limited by an asphalt cap and because they were generally greater than 6 feet below ground surface (bgs) in areas other than around the Building 970 footers (see discussion of Task 3 below). If, in the future, underlying soils were to be disturbed during redevelopment activities at the Site or Building 970 is scheduled to be demolished, the RI recommended that a soils management plan be developed, reviewed, and approved by the Navy and regulatory agencies and that impacted soils exceeding applicable screening levels be removed and properly disposed of by the party responsible for the activities.

Tasks 3 and 4 required the development and implementation of an interim remedial action work plan to address soils found to contain significant concentrations of petroleum constituents during the RI sampling activities conducted under Tasks 1 and 2. The findings of the RI indicated that no additional treatment or removal of soils in the former 957 and 970 source areas was necessary. Therefore, the interim remedial action carried out under Tasks 3 and 4 focused on the removal of hydraulic lifts, associated control lines, an oil/water separator (OWS), and any soils impacted with significant concentrations of petroleum constituents in Building 970. Tasks 3 and 4 were completed by preparing and implementing a plan to remove the subject infrastructure and soil because it may serve as a continuing source of petroleum constituents to soil and groundwater. Details about the removal activities carried out during the interim remedial action in Building 970 are summarized in Section 3.0 and can be reviewed in the *Draft Summary Report for Hydraulic Lift and Oil/Water Separator Removal from Building 970, Department of Defense Housing Facility (DoDHF) Novato, California* (Battelle and RRM, 2000). Verification soil sampling was performed at locations immediately beneath and around the removed subsurface infrastructure to confirm the absence of impacted soils or to define the degree and extent of impacted soils that had to be left in place. Samples were analyzed for the presence of total petroleum hydrocarbons quantified as oil (TPH-O), TPH-G, BTEX, MTBE, and metals. The only exceedance of industrial preliminary remedial goals (PRGs) was lead at one location. The hydrocarbon-impacted soils remaining were almost exclusively limited to small volumes underlying building footings and walls, which had to be left in place due to concerns related to structural safety.

The results of the final revised risk assessment and the recommendations from the hydraulic lift report (Battelle and RRM, 2000) indicated that no corrective action was required to protect human health and the environment from these soils. ICs were established to manage these soils and ensure that if these soils are disturbed, they will be managed properly and safely. Remedial action objectives (RAOs) for soil were therefore considered to have been achieved by the operation of the interim remedial action and the hydraulic lift removal activities. No further corrective action for soils was required to satisfy

Order 00-064 or to protect human health, the environment, or the water resources of the State of California.

Tasks 5 and 8 included the development of a Groundwater Monitoring Plan and Monitoring Well Protection Plan (Battelle, 2000b, 2000c). The groundwater monitoring plan described procedures for groundwater sampling of existing wells at the Site and surface water sampling of Pacheco Creek. Several groundwater monitoring plans have since been developed and approved by the regulators to adapt to changing conditions associated with groundwater contamination and remediation at the Site.

Task 6 required the preparation of a CAP that took into account all historical characterization data, risk assessments, and remedial activities performed at the Site. The Navy submitted the *Final Corrective Action Plan for Groundwater for Former Underground Storage Tank Site 957/970, Department of Defense Housing Facility, Novato, CA* (Battelle, 2002a), recommending a remedial strategy that included biosparging with a soil vapor extraction (SVE) contingency, monitored natural attenuation (MNA), and ICs to achieve the final cleanup goals at the Site. The Final CAP was approved by the Water Board and the remedial strategy was implemented.

Task 7 required that interim controls be placed on any soils that were excavated and groundwater that was extracted and discharged from the Site in order to protect human health and the environment. The Navy submitted the *Interim Site Control Plan for the Department of Defense Housing Facility, Novato, California* (Battelle, 2001c) to complete Task 7.

Task 9 required that Site Status Reports be developed on a quarterly basis and include all data gathered and observations made during each sampling event, a summary of findings, potentiometric maps, and tabulated groundwater level measurements and groundwater analytical reports for all petroleum constituents analyzed. Task 9 was subject to updates over time based on changes to site conditions and data quality objectives (DQOs), as long as the regulatory agencies approved of the updates. Due to changes in conditions at the Site and the fact that such a significant amount of data have been collected to provide a detailed understanding of site conditions, the regulatory agencies approved of annual groundwater sampling and one Annual Site Status Report starting in 2014.

2.3.1 Institutional Controls and Future Land Use. The Navy has transferred ownership of DoDHF Novato under the BRAC program as described in the Hamilton Army Airfield Reuse Plan: Final Reuse Plan (Hamilton Local Reuse Authority, 1996). The Navy segregated the property into various land parcels to support planned property transfer activities. Figure 2 illustrates the boundary of the four parcels that comprise or are within the immediate vicinity of Former UST Site 957/970. To date, all four parcels have been transferred with the planned future land uses reference below:

- Public Benefit Conveyance (PBC) Parcel 1A – school/residential
- PBC Parcel 1B – school/residential
- Commissary Triangle Parcel – community facilities
- Hamilton Square Parcel – commercial/industrial but the current property owner is moving ahead with plans to conduct additional remedial activities such that residential reuse will be allowed.

ICs were a component of the remedy selected in the Final CAP (Battelle, 2002a). The objectives of the ICs are twofold: 1) to ensure that commercial use of the land at the gas station site (immediate area surrounding Building 970) is maintained and that residential use is prohibited in that area; and 2) to ensure that future actions over the entire site do not affect the petroleum constituent

groundwater plumes. The primary legal mechanism used to implement land use controls are restrictions included in the quitclaim deeds for the subject property. The following restrictions and controls apply to the entire Site:

- Construction and/or operations on the property shall not interfere with the ongoing monitoring or assessment of work being conducted by or for federal, state, or local regulatory agencies. Removal and disposal of contaminated soil or groundwater by the transferee, its successor or assigns shall be conducted in accordance with all applicable federal, state, and local regulations governing removal, transport, and disposal of hazardous substances and hazardous waste.
- Disturbance of existing groundwater wells is prohibited unless specifically approved by the Navy and the Water Board. No groundwater production wells may be installed for residential, municipal, agricultural, or industrial use, without written approval of the Water Board. Monitoring and other test wells are not subject to this provision, including borings for the purpose of testing wells, wells for monitoring the quality of groundwater, and borings to define geology.

In addition to the above restrictions and controls, construction and occupation of residential structures or day-care centers is prohibited on the Hamilton Square Parcel. However, as stated above, the current property owner is moving ahead with plans to conduct additional remedial activities such that residential reuse will be permitted.

In addition to ICs, the Navy entered into an agreement with the State of California, through the DTSC and Water Board, allowing the state, pursuant to California Civil Code Section 1471, to enforce the restrictions on the use of property for the purpose of protecting human health, safety, and the environment. Such a covenant is based on the human health risk assessment models executed by the Navy and the DTSC. This covenant lists environmental restrictions and serves as the primary legal mechanism to enforce land use restrictions.

The *Final Revised Risk Assessment for Former Underground Storage Tank Site 957/970 at the Department of Defense Housing Facility, Novato, California* (Battelle and ERRG, 2011) concluded by recommending the use of ICs to restrict land use for property transfer to Novato Unified School District (NUSD) based on the low magnitude of risks remaining at Parcel 1A. A land use control in the form of a Covenant to Restrict the Use of Property was implemented around Parcel 1A to prevent indoor air exposure and access to groundwater and soil in the area. Details regarding the land use control restrictions in the Covenants to Restrict the Use of Property can be found on record with the County of Marin. Restrictions to subsurface soil and groundwater are summarized below:

Groundwater Management:

- prohibiting activities involving interaction with the groundwater beneath the Site

Soil Management:

- digging restrictions, prohibiting disturbance of the soil unless it is removed and disposed of following all applicable laws and regulations
- prohibiting residential building on the Site; and, ongoing monitoring of contaminated media

Continuing north of Navy property onto former Hamilton Army Air Field (HAAF) property, an area referred to as “Hamilton Meadows Subdivision” exists, and is developed for residential use and

includes recreational areas. The area northwest of Hamilton Meadows Subdivision is open land that is not currently in use. Land use planning documents provided by the City of Novato on its website (City of Novato, 2015) show that the Hamilton Master Plan adopted by the City of Novato presents plans for a 414-acre mixed-use community in this area which includes Community Park (Hamilton Community Park) designations for the former base landfill (Landfill 26) and adjacent former ammunition bunker area, comprising approximately 81 acres. The former landfill and buffer area are retained by the Army (48 acres) in this plan, and adjacent property was deeded to the City of Novato by the federal government for recreational use (http://novato.org/government/community-development/planning-division/planning-projects/hamilton-fields-sports-complex).

2.4 Geology

The Site lies within the Coast Range geomorphic province of northern California, which is characterized by subparallel mountain ranges, alluviated intermontane valleys, and active northwest-oriented strike-slip faults. Surface geology includes Quaternary sediments consisting of Bay Mud, alluvium, and colluvium that overlie Cretaceous Franciscan bedrock. The Franciscan bedrock is generally hard, massive, and slightly fractured. In several upland areas that surround the Site, the Franciscan bedrock outcrops and forms isolated hills (e.g., Ammo Hill and Reservoir Hill).

Site lithology information has been obtained through several cone penetrating testing (CPT) and well installation activities conducted from April 1998 through October 2010. At the Site, an alluvial unit consisting of clays, silts, sands, and gravels directly overlies a bedrock valley. In the southern area of the plume, boring logs indicate that the alluvial unit is highly heterogeneous, consisting of interfingered deposits of clay, silt, sand, and gravel. In the leading edge (northern) area of the plume, the alluvial unit consists of more homogeneous, discrete layers of sandy, silty, and clayey material. In this area, sand tends to immediately overlie the Franciscan bedrock. In turn, clayey materials comprising the Bay Mud unit tend to overlie the sands. In the Landfill 26 area, the alluvial unit is further overlain by a landfill refuse layer and cap material.

The uppermost bedrock unit at the Site is the Franciscan Formation, a blue-gray, fine- to medium-grained sandstone. It has been slightly altered by metamorphism, sealing its primary porosity. The sandstone is often weathered and fractured, creating secondary porosity, and the fractures are commonly filled by either calcite or silica material and is not believed to be a significant source or transmitter of groundwater at the Site. Previously mapped bedrock elevation reveals a bedrock valley beneath the Site (Battelle, 2014). This valley is narrow in the UST source areas and broadens moving northward toward the leading edge area. The bedrock outcrops on the east side of the bedrock valley, forming Reservoir Hill. North of the leading edge area of the plume, the bedrock also outcrops in the middle of the valley, forming Ammo Hill. Bedrock is encountered at approximately 15 ft bgs in the former UST source areas and approximately 23 ft bgs in the leading edge area.

2.5 Hydrogeology

The primary water-bearing zone at the Site is the alluvial unit directly overlying the bedrock unit. Groundwater flow is generally from south to north. Flow gradients are generally steeper in the southern portion of the plume area where the alluvial unit is thinner vertically and narrower west to east due to the structure of the bedrock valley. Flow gradients lessen to the north where the alluvial unit thickens and broadens, again due to the bedrock topography. Figure 3 presents potentiometric surface maps from 2011 through 2015. The bedrock outcrop at Ammo Hill north of the plume leading edge causes groundwater flow in the alluvial aquifer to diverge to the northwest and northeast. Thus, the bedrock topography exerts significant control on groundwater flow in the area. Groundwater recharge in the alluvial aquifer originates primarily from precipitation. In addition, significant groundwater flux is

believed to occur from portions of the alluvial aquifer that are upgradient of the Site. Groundwater in the alluvial unit is unconfined in the southern portion of the plume and confined by the Bay Mud in the northern portion of the plume. A handful of bedrock wells exist at the site, with water levels similar to those observed in adjacent alluvial wells. During sampling, the bedrock wells yield low water volumes, consistent with the belief that the bedrock is not a significant source or transmitter of groundwater at the site. Hydraulic conductivity values in the alluvium from slug test data range from 0.4 ft/day to 20.7ft/day. Slug test data from the bedrock unit suggest hydraulic conductivity values on the order of 0.2 ft/day exist at the site (Battelle, 2002a).

2.5.1 Potential Future Groundwater Use. Groundwater underlying the Former UST Site 957/970 and the leading edge area is located within the Novato Valley Groundwater Basin. The Water Board has designated all groundwater in the Novato Valley Groundwater Basin to be a potential water source for use as domestic or municipal supply which led to the maximum contaminant level (MCL) of 13 micrograms per liter (µg/L) for MTBE being identified as the final cleanup goal in the Final CAP (Battelle, 2002a). It is important to note, however, that although the Water Board has not formally acknowledged that groundwater at the site meets Resolution 88-63 criteria for a municipal beneficial use exemption (Water Board, 1988, amended in 2006), purge logs from several years of site investigations utilizing low-flow groundwater sampling techniques show relatively low groundwater yields and suggest that the aquifer would very likely meet beneficial use exemption 2 in Resolution 88-63 (i.e., a water well installed in this portion of the aquifer cannot supply a sustained yield of 200 gallons/day). Table 2 presents groundwater monitoring well completion specifications and well yield information from all groundwater monitoring wells currently sampled as part of the groundwater monitoring program. The well yield values were derived from the 2014 groundwater sampling purge logs used in the field during low-flow groundwater sample collection. Several of the monitoring wells on site often exhibit excessive drawdown (greater than 0.33 ft when pumped at low-flow pump rates between 100 and 200 mL/min) during groundwater sampling (Battelle, 2015). A review of the 2014 purge logs shows that of the 49 wells sampled using low-flow techniques, 36 exhibited drawdown (non-sustaining water levels) during low-flow purging and sampling activities.

In addition to the Water Board yield requirement in Resolution 88-63, the County of Marin has its own, more stringent, well yield requirements that would prevent a water supply well from being installed in the aquifer (County of Marin, 2015). Marin County requires a minimum sustained yield of 1 gallon per minute over three days for a sustained yield requirement of 2,160 gallons/three days of pumping (720 gallons/day) for one residence seeking a water supply from groundwater. Site specific monitoring well yield values range from 18 gallons/day to 76 gallons/day for wells pumped under standard low-flow conditions (Table 2), precluding the possibility of a water supply well being installed in the aquifer at this site.

Combined with aquifer conditions at the site not being capable of producing the required sustainable yield, several city, municipal, county, and state regulations relevant to site specific conditions including future land use plans, historical contamination at the site, and the shallow nature of the aquifer in the leading edge area, exist that would prevent a water supply well from being installed in the aquifer and utilized for drinking water. For example, no specific well construction criteria exist for Marin County, and, thus, the State Well Standards provided by the Department of Water Resources (DWR) are followed. As stated in the DWR well standards Bulletins 74-81 and 74-90 (DWR, 1991) Section 9.0, *the annular surface seal for an individual domestic water well shall extend from ground surface to a minimum depth of 20 ft bgs*. The Bulletin further states, *the minimum depth [of the annular seal] for a community water supply well shall extend to 50 ft bgs*. The maximum depth to bedrock underlying the plume in the leading edge area is approximately 35 ft bgs, with the depth to bedrock in the upgradient portion of the plume being as shallow as 20 ft bgs. The bedrock unit gets shallower moving west and south away from Landfill 26. Under the best case scenario, the sanitary seal requirement of 50 ft bgs provided in the DWR Well

Bulletin would require a water supply well to be set approximately 15 ft into bedrock in the area. The bedrock unit exhibits significantly lower yield than the overlying alluvial unit (Battelle, 2002a). Subsequent well yield testing required by the County of Marin mentioned above would most likely show that the sustainable yield requirement could not be met for water supply wells completed in the bedrock unit.

Despite these restrictions, if a well permit application was approved for installation of a water supply well, groundwater sampling would be required per Marin County Water Code, CCR -Title 22, Chapter 15, Articles 3, 4, 5.5, 16 Marin County Code: Sec. 7.28.10 which states:

> *The health inspector requires organic chemical testing when the well is considered vulnerable to a past or current potential contaminating activity. Such higher risk sites include those close to fuel tanks, certain commercial/ industrial activities or preparation areas for pesticides and herbicides. Unless geographical conditions suggest otherwise, a default radius of 600 feet is used to evaluate potential threats.)*

Because a few wells in the leading edge area remain above MCLs for MTBE in drinking water (the maximum being 320 µg/L at LEA-MW5), the application would not be approved and thus a well would not be approved for installation.

Installation of a water supply well in the leading edge area is further rendered unlikely because land use planning documents provided by the City of Novato on its website show that the Hamilton Master Plan adopted by the City of Novato presents plans for a 414-acre, mixed-use community which includes Community Park (Hamilton Community Park) designations for the former base landfill (Landfill 26) and adjacent former ammunition bunker area, comprising approximately 81 acres. The former landfill and buffer area are retained by the Army (48 acres) in this plan, and adjacent property was deeded to the City of Novato by the federal government for recreational use (City of Novato, 2015). Because the land over Landfill 26 and the adjacent area is zoned for recreational public use, the Marin Municipal Water District requires that all water supplying public facilities including open space and recreationally zoned areas must utilize existing municipal water supply hook-ups for a water supply for drinking water and fire suppression (Marin Municipal Water District, 2015). Therefore, in the unlikely event a water supply well in this area was permitted by the County, the water supply well installation request would not receive approval from the City of Novato or the Marin Municipal Water District during the initial planning stages.

Finally, no domestic, irrigation, or agricultural wells are currently impacted by the dissolved-phase gasoline constituents released from the Site. A public water supply is readily available via the Marin Municipal Water District and, therefore, nuisance as defined by Water Code Section 13050 does not exist at the site.

Section 3.0: SITE CHARACTERIZATION AND REMEDIATION ACTIVITIES

This section briefly describes the investigations and remedial activities conducted at the Site between 1992 and 2015. The potential sources of contamination that have been investigated include USTs, associated pipelines, a former fuel pump house, and the hydraulic lifts and associated infrastructure in former Building 970. The following investigations, remedial activities, and documents were completed:

- March 1992: UST 957 was removed (PRC Environmental Management Inc., 1992).
- November/December 1994 and January 1995: Screening level soil and groundwater sampling was conducted in the area surrounding former UST 957 using a Geoprobe™ (ERM-West Inc., 1998).
- December 1994: Permanent groundwater monitoring wells were installed in the area surrounding former UST 957 and sampled in January 1995 (ERM-West Inc., 1998).
- January 1995: UST 970-3 was removed by the Navy's PWC (ERM-West Inc., 1998).
- January 1995: Waste oil was removed from Tank 970 by PWC personnel (ERM-West Inc., 1998).
- May 1996: Groundwater sampling and CPT using the Navy's site characterization and analysis penetrometer system (SCAPS) at the NEX gas station area around Building 970 (PRC Environmental Management, Inc., 1996).
- July 1996: USTs 970-1 and 970-2 were removed (Navy PWC, 1996).
- October 1996: Monitoring well installation around 957/970 source areas (Battelle, 2000a).
- June/July 1997: Additional groundwater investigation was conducted due to a concern over MTBE concentrations (Battelle, 1998a).
- February 1998: A Tier 1 risk-based corrective action (RBCA) assessment was performed (Battelle, 1999a).
- March 1998: MTBE plume delineation (Battelle and RRM, 2000).
- April/May 1998: In situ air sparge (IAS) and SVE installation and startup (Battelle, 2002a).
- April/May 1998: An extensive groundwater monitoring well network was installed at the site (Battelle, 2000a).
- May 1998: A second limited investigation was performed using a CPT to delineate the boundaries of the MTBE groundwater plume (Battelle and RRM, 2000).
- June 1998: Soil gas from beneath Building 973 was collected and analyzed (Battelle and RRM, 2000).
- August 1998: Another investigation using a CPT was performed to further delineate the MTBE plume (Battelle and RRM, 2000).
- October 1998: IAS/SVE system expansion (Battelle, 2002a).
- November 1998: Conceptual site model (CSM) developed based on groundwater modeling effort and characterization data collected to date (Battelle, 2000a).

- January 1999: An Interim Project Report was prepared for the purpose of summarizing remedial progress and site activities conducted to date (Battelle and RRM, 2000).
- March 1999: A Tier 2 RBCA assessment was prepared by the Navy (Battelle, 1999a).
- October 1999: A revised and Final Tier 3 RBCA assessment was prepared by the Navy that included results of confirmation soil gas sampling and the expanded assessment of the ingestion of homegrown fruits and vegetables as a potential exposure pathway as requested by the Water Board (Battelle, 1999b).
- October 1999: IAS/SVE system was shut down.
- December 1999: Draft Ecological Risk Assessment prepared by the Navy indicating no unacceptable risks to ecological receptors (Battelle, 1999c).
- April 2000: Building 970 hydraulic lift and OWS removal (Battelle and RRM, 2000).
- June 2000: First round of surface water sampling at Pacheco Creek (Battelle, 2001d).
- July 2000: The Water Board issued Order No. 00-064, which identified requirements for the Site. The Order required additional soil and groundwater investigations, development of a CAP for plume containment and cleanup, and continuation of groundwater monitoring and reporting. In addition, the Order required interim controls on the excavation of soils or discharge of groundwater at the Site (Battelle, 2002a).
- September 2000: A Groundwater Monitoring and Monitoring Well Protection Plan was developed (Battelle, 2000c).
- September 2000: An "Interim Site Control Plan for the Department of Defense Housing Facility, Novato, California" (Battelle, 2001c) was prepared by the Navy in compliance with Order No. 00-064 Task 7.
- September 2000: RI sampling activities were performed in compliance with Order No. 00-064 Task 2 following procedures outlined in the RI Work Plan (Battelle, 2002a).
- January 2001: Results of the RI activities were presented in the Final RI Report prepared by the Navy and submitted to the Water Board in compliance with Order No. 00-064 Task 2 (Battelle, 2001a).
- March 2001: Final Revised Risk Assessment was conducted by the Navy (Battelle, 2001b).
- September 2002: Biosparging system was installed and initiated to treat elevated concentrations of MTBE on Navy-owned property. The system was ultimately shut down in January 2009 (Battelle, 2002b).
- May 2009: The *Final Corrective Action Plan Addendum, Former UST Site 957/970 at the Former Department of Defense Housing Facility, Novato, California* was issued for the Site (Battelle, 2009) updating the CSM and selecting air sparging to treat elevated concentrations near the leading edge of the MTBE plume.
- May 2010: Pre-air sparge design grab sampling event and well abandonment (Battelle, 2011).
- October/November 2010: Leading edge air sparge system and performance well monitoring well installation (Battelle, 2011).
- December 2011: Leading edge air sparge system was shut down and rebound monitoring initiated (Battelle, 2012)

- November 2013: Leading edge air sparging system permanently removed and associated wells abandoned (Battelle, 2014).
- Quarterly, semiannual, and annual groundwater sampling occurred from 1998 to 2014
- Remedial action in Hamilton Square Parcel (West Yost Associates, 2015)

Details of each activity are presented in Table 3. Appendix A presents a data compilation of analytical results for petroleum constituents in groundwater from January 1995 to November 2015. Appendix B provides the most recent 2014 Annual Site Status Report (Battelle, 2015).

The Final CAP (Battelle, 2002a) and Final CAP Addendum (Battelle, 2009) includes a description of the results of the above investigations and remedial actions performed at the Site from 1992 through early 2009 as well as a summary of the following information as part of the site evaluation for Former UST Site 957/970:

- Multiple human health risk assessments
- Ecological risk assessment
- Development and updates to the CSM.

Because past investigations and the associated results have been presented in detail in previous reports, they are not presented further in this Closure Report. Rather, the following subsections summarize pertinent information of the previous investigations and remedial actions at the Site, present the recommendations and conclusions found within the Final CAP Addendum (Battelle, 2009); and describe subsequent (i.e., post 2009) investigations and remedial actions performed at the site.

3.1 Corrective Action Plan Summary –Investigation and Remedial Activities, 1992 through 2010

The following subsections summarize relevant information of previous investigations and remedial actions conducted at the Site from 1992 to 2000 and presents the recommendations from the Final CAP Addendum (Battelle, 2009).

Previous investigations and remedial actions conducted at Former UST Site 957/970 suggested the presence of petroleum hydrocarbons in soil and groundwater at the site. The results of multiple site investigations indicated the primary constituents of concern (COCs) were MTBE, BTEX, TPH-G, and to a lesser extent, TPH quantified as motor oil (TPH-MO) and TPH-D. Based on the observed distribution of petroleum hydrocarbons and associated chemicals, the likely source of groundwater and soil contamination was determined to be leaking USTs 957 and 970 (1-3), Tank 970-Waste Oil, and Building 970 Hydraulic Lift and associated piping.

3.1.1 Source Identification and Removal. Sources were defined as structures (i.e., tanks and pipes) that leak hydrocarbons, or as the presence of free product (free-phase petroleum or fuel light nonaqueous-phase liquid [LNAPL]) resulting from the leaking structure. All tanks and associated piping at the Site have been removed. Two observances of free product have been recorded at the Site: (1) in the vicinity of UST 957 during a Geoprobe™ investigation conducted in late 1994 by ERM-West (ERM-West, 1995); and (2) measured in monitoring well 970-MW5 in August 1996 (ERM-West, 1998). However, the presence of free product has not been observed in any of the Site wells, soils, or purged groundwater since Battelle began activities at the Site in December 1997.

The tank and underground piping for UST 957 were removed in March 1992 (Figure 2). After tank removal, the underlying and adjacent soil was excavated. Underground piping from the UST to the pump island and vent lines from the tank were removed and the piping trenches were over excavated. Confirmation soil samples were collected from the north and south sidewalls of the UST excavation and analyzed for TPH-purgeable and BTEX compounds. Maximum TPH-purgeable concentrations from the soil samples were 220 mg/kg, and maximum BTEX concentrations were detected at 360 µg/kg, 560 µg/kg, 1,000 µg/kg, and 3,880 µg/kg, respectively. A groundwater sample was collected from within the UST excavation and analyzed for TPH-purgeable as gasoline and BTEX constituents. Maximum concentrations were detected for TPH-purgeable of 60 mg/L and BTEX constituents were detected at maximum concentrations of 4,400 µg/L (Battelle, 2002a). Soil samples were collected from the piping trenches at a frequency of one sample per 20 linear feet and analyzed for TPH-purgeable as gasoline. The maximum concentration detected in these samples was 1,200 mg/kg. All analytical results of soil and groundwater samples collected during UST 957 removal activities are available in the *Final Corrective Action Plan for Groundwater for Former Underground Storage Tank Site 957/970 Department of Defense Housing Facility Novato, California* (Battelle, 2002a). The removal and investigation of UST 957 is described further in the UST Removal and Preliminary Investigation (PRC Environmental Management, Inc., 1992).

UST 970-3 was removed on January 5, 1995. The location of the tank is shown in Figure 2. Following removal of UST 970-3 and associated piping, two soil samples and one water sample were collected from the excavation and analyzed for TPH-G and BTEX. As stated in the *Final CAP* (Battelle, 2002a), maximum concentrations of hydrocarbons or gasoline constituents detected in the soil samples were TPH-G at 18 mg/kg, benzene at 150 µg/kg, toluene at 130 µg/kg, ethylbenzene at 160 µg/kg, and xylenes at 1,700 µg/kg. Gasoline constituents detected in the groundwater sample included TPH-G at 45 mg/L, benzene at 1,900 µg/L, toluene at 4,800 µg/L, ethylbenzene at 490 µg/L, and xylenes at 6,200 µg/L. On February 7, 1995, another groundwater sample was collected from the excavation and analyzed for TPH-G and BTEX. The analytical results for the second groundwater sample indicated that TPH-G was present at 21 mg/L, benzene at 640 µg/L, toluene at 1,300 µg/L, and xylenes at 2,600 µg/L. On February 22, 1995, 3 feet of soil were removed from the north, west, and east sidewalls of the excavation and visibly contaminated soils were removed from the piping trench between the tank and pump islands. On February 23, 1995, confirmatory soil samples were collected from the north, south, and west sidewalls of the excavation. TPH-G was detected at a maximum concentration of 13 mg/kg, while BTEX compounds were detected at maximum concentrations of 1,200 µg/kg benzene, 70 µg/kg toluene, 550 µg/kg ethylbenzene, and 2,600 µg/kg xylenes.

On March 27, 1995, additional confirmatory soil samples were collected from the tank excavation and piping trench and analyzed for TPH-G and BTEX. Gasoline constituents reported in the excavation samples (Battelle, 2002a) included TPH-G (ranging from nondetect to 520 mg/kg), benzene (ranging from nondetect to 200 µg/kg), toluene (ranging from nondetect to 730 µg/kg), ethylbenzene (ranging from nondetect to 520 µg/kg), and xylenes (ranging from nondetect to 11,000 mg/kg). No gasoline or BTEX compounds were detected in the soil samples collected from the pipe trench. The excavation was backfilled and covered with asphalt with the approval of the Marin County Department of Health (ERM-West, 1998).

On January 9, 1995, PWC personnel removed Tank 970-Waste Oil (ERM-West, 1998). The 1000-gallon steel tank appeared to be in good condition upon removal. For additional information concerning the tank removal activities and results, refer to the *Final UST Investigation Report for Former Underground Storage Tank Site 957/970* (ERM-West, Inc., 1998).

UST 970-1 and UST 970-2, located 70 ft south of the NEX Service Station pumping islands and adjacent to and east of UST 970-3, were removed on July 3, 1996. The location of the USTs are

featured in Figure 2. Five soil samples were collected from the north, south, and east sidewalls of the excavation upon removal of the USTs. Analytical results from the investigation are provided in the Final CAP (Battelle, 2002a). Analytical results from soil samples showed maximum concentration for TPH-G of 6,800 mg/kg, for benzene 61,000 µg/kg, for toluene 340,000 µg/kg, ethylbenzene 67,000 µg/kg, xylenes 720,000 µg/kg, and MTBE 310,000 µg/kg. One groundwater sample was collected from the tank pit and analyzed for TPH-G (<50 mg/L), BTEX (110 µg/L, 510 µg/L <500 µg/L, and 3,500 µg/L, respectively), and MTBE (170,000 µg/L). Analysis of soil samples collected beneath the pump island piping found maximum concentrations of TPH-G (2,800 mg/kg), benzene (170 µg/kg), toluene (36,000 µg/kg), ethylbenzene (33,000 µg/kg), xylenes (310,000 µg/kg) and MTBE (22,000 µg/kg) (Battelle, 2002a). The excavation was backfilled and covered with asphalt with the approval of the Marin County Department of Health Services. Further detail on the removal of UST 970-1 and UST 970-2 can be found in the UST removal summary report (Navy PWC, 1996).

In 1998, a soil and groundwater sampling plan (Battelle, 1998b) was developed and executed to evaluate and confirm the extent of a hydraulic fluid release from the northernmost of two hydraulic lifts in Building 970 (PRC Environmental Management, 1997). Soil samples were collected from depths of 4.0 to 5.0 ft bgs and from 9.0 to 10.0 ft bgs. The soil sample collected at 4.0 to 5.0 ft bgs contained a 15,000 mg/kg concentration of TPH-MO, whereas the soil sample collected from 9.0 to 10.0 ft contained only a 12 mg/kg concentration of TPH-MO. Groundwater in the vicinity of the hydraulic lift was not investigated at that time (PRC Environmental Management, 1997).

As reported in the Final CAP (Battelle, 2002a), the highest hydrocarbon concentration in soil was detected at the 4.5- to 5.5-ft-depth interval in the location closest to the hydraulic lift. TPH-MO was detected in this sample at a concentration of 18,000 mg/kg. Naphthalene, phenanthrene, and pyrene were also detected in this sample. All analytes were below detection limits in the 6.5- to 7.5-ft-depth interval at the same location. A naphthalene concentration of 4,200 µg/kg also was detected at the 4.5- to 5.5-ft interval of the second closest sampling location to the hydraulic lift. Groundwater concentrations of TPH-MO ranged from below the detection limit to 5.6 mg/L in the vicinity of the hydraulic lift. Groundwater concentrations of TPH-D were approximately 1 mg/L or less at all sample locations.

Excavation and removal of subsurface features in and around Building 970 followed the *Final Work Plan for Hydraulic Lift and Oil/Water Separator Removal From Building 970* (Battelle and RRM, 2000), which was approved by the Water Board. As removal activities proceeded, additional subsurface features were identified that were not described in the Work Plan. These features were removed and sampled in accordance with procedures described in the Work Plan. Subsurface features removed from the Site include the following:

- Three hydraulic lifts and associated control lines
- Control line for a suspected former hydraulic lift and confirmation sampling at the location of the suspected former lift
- Two OWS systems (identified as OWS1 and OWS2) and associated influent and effluent piping
- Four floor drains associated with the influent line of OWS1
- Four buried drums (Drums 1 through 4) acting as collection tanks associated with the influent line of OWS2
- Effluent line of OWS2 running along the footer on the west side of Building 970
- Sanitary sewer lateral associated with the OWS1 and OWS2 systems

- Waste oil line associated with a former waste oil tank.

During removal activities, petroleum hydrocarbon-impacted soil was encountered near both OWS units, around two drums, and beneath and around the foundations in the northern and northwestern portions of Building 970. Verification soil sampling was performed at locations immediately beneath and around the removed subsurface facilities. Over excavation activities were performed to the extent practicable to remove affected soils encountered during removal activities. Complete removal of affected soil was constrained by the limited work area inside the building and the potential to undermine building foundations. Verification samples were collected to confirm the absence of impacted soils or to define the degree and extent of impacted soils left in place. Soil samples were collected from sidewalls and trench bottoms to confirm the remaining concentrations of TPH and metals. Over excavation activities were performed to the extent practicable to remove affected soils from those areas where the petroleum hydrocarbon soil cleanup levels and/or United States Environmental Protection Agency (U.S. EPA) Region 9 Residential PRGs were exceeded. For more detailed information regarding field and analytical procedures and removal activities refer to the *Draft Summary Report for Hydraulic Lift and Oil/Water Removal from Building 970* (Battelle and RRM, 2000).

Water Board Order 00-064 required that the highest concentrations of soil pollution detected in the RI as described in Order 00-064, Task 1, and performed and reported under Task 2 be addressed in the feasibility study portion of the Final CAP (Battelle, 2002a). Soil concentrations observed during the RI activities were reported in the RI Report (Battelle, 2001a) submitted in compliance with Order 00-064, Task 2, and were assessed in the Final Revised Risk Assessment submitted in June 2001 (Battelle, 2001b). Other petroleum impacts to soil were addressed in 1) the hydraulic lift removal activities that involved extensive excavation within and around Building 970, and 2) the Draft Summary Report for Hydraulic Lift and Oil/Water Separator Removal from Building 970 (Battelle and RRM, 2000) associated with those activities. These reports documented the nature and extent of hydrocarbons in soils in the former NEX service station area. The results of the Final Revised Risk Assessment and the recommendations from the hydraulic lift report did not indicate that corrective action was required to protect human health and the environment from these soils. ICs were established as described in Section 2.3.1 to manage these soils and ensure that if these soils are disturbed, they will be managed properly and safely. RAOs for soil were therefore considered to have been achieved by the operation of the interim remedial action and the hydraulic lift removal activities. With agreement from the regulatory agencies, no further corrective action for soils was required to satisfy Order 00-064 or to protect human health, the environment, or the water resources of the State of California.

3.1.2 In Situ Remediation, 1998 through 2010

3.1.2.1 Former Source Area. In May 1998 at Former UST Site 957/970, a coupled IAS/SVE system was installed to reduce the mass of hydrocarbon in selected areas having elevated COC concentrations. This remediation effort was designed to reduce the potential of the groundwater plume to migrate and reduce hydrocarbon concentrations. Significant mass removal was achieved through the operation of air sparging and SVE systems. An estimated 23,000 lb of gasoline were calculated to have been removed through the SVE system. In general, TPH-G, BTEX, and MTBE concentrations in the off-gas stream decreased substantially since system startup (Battelle, 2002a). The SVE system TPH-G removal rate had decreased to about 3 lb/day during periods of higher water table levels earlier in the year of operation. Because risk assessment activities indicated that concentrations at the Site did not exceed risk-based screening levels (RBSLs), the air sparging and SVE systems were shut down in early October 1999.

As a result of past RI activities and to comply with Water Board Order 00-064 (Task 6), the Final CAP (Battelle, 2002a) was developed where biosparging was recommended as the remedial action alternative for the Site. Following the Final CAP, the Final Remedial Design Work Plan (RDWP)

(Battelle, 2002b) was developed to implement the approved recommendation in the Final CAP (biosparging as the remedial alternative). The RDWP established a surface (Pacheco Creek) and groundwater monitoring program to monitor the petroleum constituents and biosparge system performance. The monitoring program was used to support MNA monitoring to inform an MNA exit strategy to attain groundwater RAOs.

In September 2002, a biosparging system was started and operated in the Former UST 957 Area. The main remedial objectives of the biosparging treatment system were to:

1. Stabilize and contain the higher concentration MTBE groundwater plume on the currently Navy-owned portion of the Site.
2. Remediate the highest concentrations of soil pollution detected.
3. Reduce and remediate the concentrations of MTBE in Site groundwater.
4. Reduce and remediate the concentrations of benzene in Site groundwater which exceed applicable RBSLs.

During the time period in which the biosparging system was temporarily turned off (March 2005 to March 2006), MTBE concentrations remained relatively stable. The biosparging system was subsequently reinstated and operated on a pulsed schedule from March 2006 to January 2009. In July 2007, the Navy formally requested permission to shut down the biosparging system (due to observed significant reduction in COCs) and initiate a rebound monitoring program. In August 2007, the Water Board subsequently requested a response plan in the event that MTBE concentrations at the leading edge of the plume did not begin to stabilize or decrease. In December 2008, the Navy presented plans for managing unstable to increasing MTBE groundwater concentrations at the leading edge area of the plume by submitting a CAP Addendum to address MTBE concentrations at the leading edge of the plume. In January 2009, the *Final Corrective Action Plan Addendum For Former Underground Storage Tank Site 957/970 Department Of Defense Housing Facility Novato, California* (Battelle, 2009) was finalized.

Overall, a 99% reduction in average MTBE concentrations was observed in November 2008. The results indicated that the primary performance goals for the biosparging system (i.e., 95% to 99% reductions in MTBE concentrations) listed in the Final CAP (Battelle, 2002a) were achieved.

The biosparging system (in combination with past treatment of IAS/SVE and natural attenuation) had reduced the maximum MTBE concentrations on Navy property and, in the process, essentially eliminated any remaining source of MTBE to downgradient portions of the plume.

3.1.2.2 Leading Edge Area. Remediation activities significantly reduced MTBE concentrations on Navy property, thereby limiting a continuing source of MTBE to northern portions of the plume; however, portions of the MTBE plume had already migrated off Navy property (and outside the treatment area) at the time of system construction and operation. Time-series groundwater results indicated that MTBE concentrations were stable to decreasing throughout the majority of the plume, but concentrations are unstable to increasing in five of 19 wells at the leading edge area of the MTBE plume located off Navy property. The occurrence of these increasing concentrations is indicative of a plume that is not stable or decreasing and thus did not meet the requirements for the implementation of MNA as the final remedy at the Site. As a result, *the Final Corrective Action Plan Addendum For Former Underground Storage Tank Site 957/970 Department Of Defense Housing Facility Novato, California* (Battelle, 2009) was developed and finalized to address unstable MTBE plume conditions in the leading edge area, which recommended air sparging and MNA with a phytoremediation contingency as the final corrective action for UST Site 957/970.

In December 2010, the Navy successfully installed an air sparge system in the leading edge area in accordance with the *Final Leading Edge Area Corrective Action Work Plan, Former UST Site 957/970 at the Former Department of Defense Housing Facility, Novato, California* (Battelle, 2010a). The field implementations of these activities are documented in the *Annual Site Status Report for the Year 2010, UST Site 957/970, Former Department of Defense Housing Facility, Novato, California* (Battelle, 2011).

As planned, the air sparge treatment system operated for a one-year period from December 2010 through December 2011. Based on the results from the final quarterly performance goal monitoring event conducted in November 2011, the effects of the air sparge treatment system were realized within the active treatment area with an average MTBE concentration reduction of 97.0% (exceeding RAOs of 75% MTBE reduction). In addition, asymptotic conditions were realized throughout the performance goal monitoring well network both inside and outside the active treatment area (Battelle, 2012), thus meeting RAOs outlined in the *Final Leading Edge Area Corrective Action Work Plan, Former UST Site 957/970 at the Former Department of Defense Housing Facility, Novato, California* (Battelle, 2010a). With regulatory approval, the system was shut down on December 6, 2011 after one year of operation and based on the subsequent successful rebound monitoring results in 2012 and 2013, the air sparging system in the leading edge area was permanently removed in November 2013 (Battelle, 2014).

3.2 Surface Water Monitoring –A Summary of the Surface Water Monitoring Program from 2000-2011

Surface water samples were collected from June 2000 to May 2011 from portions of Pacheco Creek running through the Site. Historical surface water sampling results are illustrated in Figure 4. Historical surface water sampling results indicate that MTBE has not been detected in Pacheco Creek (i.e., PC-SW-1, PC-SW-2, PC-SW-3, PC-SW-4, and PC-SW-5) or the culvert outlet (i.e., PC-SW-CE) since November 2004 (Figure 4), confirming that the MTBE groundwater plume was not impacting Pacheco Creek.

Based on these observations, the Navy recommended discontinuing surface water monitoring at the Site as presented in the *Annual Site Status Report for the Year 2010, UST Site 957/970, Former Department of Defense Housing Facility, Novato, California* (Battelle, 2011). In response, in April 2011, DTSC recommended collecting a sample from location PC-SW-CE during the semiannual monitoring event in May 2011 (i.e., wet season). Per DTSC recommendation, a surface water sample was collected from PC-SW-CE in May 2011 and MTBE was nondetect at that location (Figure 4), confirming that the MTBE groundwater plume was not impacting Pacheco Creek. Surface water sample collection from Pacheco Creek was discontinued after May 2011.

3.3 Groundwater Monitoring –A Summary of the Groundwater Monitoring Program from 2000-2015

Groundwater monitoring activities have been ongoing at Former UST Site 957/970 since 1994. However, this report focuses on groundwater monitoring activities conducted from 2000 through 2015 driven by Water Board Order 00-064. As mentioned previously, Water Board Order No. 00-064 (Task 9) required the development of Site Status Reports for presenting the results of groundwater and surface water monitoring activities at the Site. Site Status reports have been developed for Former UST Site 957/970 since 2000. Appendix A presents a summary of historical analytical results for relevant COCs from 1995 to 2015. The groundwater monitoring program has historically included the collection of water level measurements across the entire Site, and the collection of groundwater and surface water samples for chemical analysis of chemicals of potential concern (COPCs). Originally, groundwater and surface water analytical data were collected on a quarterly basis, however, as successful remediation and

MNA were realized across the extent of the MTBE plume, the sampling frequency and number of wells sampled decreased. Table 4 provides a summary of the analytical parameters for groundwater and surface water and frequency at which groundwater and surface water sampling took place at the site from 2000 through 2015.

In November 2000, 77 monitoring wells were sampled to adequately delineate the MTBE plume. By 2007, the number of monitoring wells in the monitoring well network peaked at 94. By 2015, multiple annual groundwater monitoring well network evaluations, driven by favorably changing site conditions (statistically significant decreasing trends in petroleum constituent concentrations), resulted in multiple well abandonment efforts being implemented and approved by the regulators, ultimately leading to the overall monitoring well network being reduced to 44 monitoring wells. Table 5 provides well summary information for these 44 monitoring wells that make up the current groundwater monitoring network.

As remedial actions and investigations progressed at the Site and concentrations of COCs decreased, the analytical program for the Site was reduced. Below is a summary of the groundwater analytical program for Former UST Site 957/970 over time (comprehensive groundwater analytical results are presented in Appendix A).

In 2000 and 2001, the primary constituents analyzed for in groundwater were BTEX, MTBE, and TPH-G and for surface water were BTEX and MTBE (Battelle, 2000b). In 2002, the groundwater sampling analysis plan was updated to include MTBE degradation products, tert-butyl alcohol (TBA), tert-butyl formate (TBF), ethyl tert-butyl ether (ETBE), tert-amyl methyl ether (TAME), and diisopropyl ether (DIPE). From 2002 to 2006, the groundwater sampling plan remained unchanged.

In October 2015, the Draft Site Closure Report requesting NFA was submitted to the Water Board and DTSC. Through the regulatory review process, a data gap was identified for TPH-G data in groundwater. Specifically, the groundwater in the vicinity of Former UST Site 957 had not been analyzed for TPH-G since 2006. In an effort to address the TPH-G data gap, the Water Board requested that the Navy collect groundwater samples from monitoring wells within the vicinity of Former UST Site 957 and that these samples be analyzed for TPH-G. The Navy subsequently collected groundwater samples from eight monitoring wells in the Former UST 957 vicinity during the December 2015 annual groundwater sampling event to address the TPH-G data gap. In the following subsections, the most current TPH-G, BTEX, and MTBE groundwater analytical results are summarized.

3.3.1 TPH-G. TPH-G was analyzed in groundwater at the Site from 2000 to 2006 In 2007, the groundwater sampling plan was updated and TPH-G was removed from the analyte list. As stated in the 2007 *Final Groundwater Monitoring Plan Update for Former UST site 957/970 at Department of Defense Housing Facility Novato, California* (Battelle, 2007):

> *Because gasoline constituents at the Site originated from a release of gasoline from USTs on site, during the initial phases of investigation, it was prudent to monitor the status of TPH-G in groundwater. However, the Site was monitored on a quarterly basis for over eight years and the dissolved plumes originating from the UST release(s) have been adequately defined. The monitoring program confirmed that MTBE and benzene are the primary gasoline range constituents of interest present in groundwater. This was reflected in the RAOs presented in the CAP (Battelle, 2002a), where MTBE and benzene are identified as the COCs for the Site. Based on this, and the fact that water quality goals are not promulgated for TPH-G, monitoring for benzene and MTBE in groundwater is acceptable to meet the RAOs and monitoring objectives for the Site.*

Therefore, with regulatory approval, the Navy discontinued TPH-G analysis in groundwater because analysis of MTBE and benzene was appropriate to ensure RAOs were met for the site. However, as discussed in the section above, TPH-G was sampled during the annual December 2015 sampling event to address the data gap identified by the Water Board during its review of the Closure Report. Figure 5 presents a contour map of the November 2006 TPH-G groundwater results collected as part of the groundwater monitoring program at the Site at that time and the December 2015 TPH-G results collected in the same vicinity as requested by the Water Board. Table 6 presents the TPH-G groundwater data from 2006 and 2015 compared to Tier 1 environmental screening levels (ESLs) for groundwater provided by the Water Board (Water Board, 2016).

Of the 34 monitoring wells sampled for TPH-G in 2006, 14 monitoring wells exhibited TPH-G concentrations above the groundwater ESL of 100 µg/L (Table 6). Of the 14 monitoring wells exhibiting TPH-G concentrations above the groundwater ESL of 100 µg/L, only five remain in the current groundwater monitoring well network (970-MW4, 970-MW5, MW-1A, MW-4A, and NA-7). The maximum TPH-G concentration observed in 2006 was in monitoring well NA-7, with a concentration of 4,200 µg/L. TPH-G was sampled in eight monitoring wells during the 2015 groundwater sampling event. Analytical results show TPH-G was detected in only two of the nine monitoring wells (970-MW4 at 55 µg/L and NA-7 at 4,400 µg/L) sampled. The remaining seven monitoring wells sampled were nondetect. Concentrations in 970-MW4 have decreased from 2,600 µg/L in 2006 to 55 µg/L in 2015. TPH-G concentrations observed in monitoring well NA-7 in December 2015 are consistent with concentrations of TPH-G exhibited in 2006 (4,400 µg/L and 4,200 µg/L, respectively). The 2015 TPH-G concentrations in NA-7 of 4,400 µg/L suggest some residual TPH-G is present at this location. However, it is important to note that downgradient well 957-MW4, screened (8 to 18 ft bgs) in the same interval as NA-7 (10 to 15 ft bgs) was nondetect, suggesting that the residual TPH-G is not migrating and natural bioattenuation mechanisms are occurring to degrade petroleum-related products and resulting in a low threat to human health and safety and to the environment. Figure 5 shows the TPH-G plume maps representing the 2006 and 2015 TPH-G concentrations in groundwater. The TPH-G plume has broken up and been significantly reduced in size since 2006, confirming that natural bioattenuation mechanisms are occurring to degrade petroleum-related products.

3.3.2 BTEX. BTEX constituents were analyzed in groundwater at the Site from 1995 to the present. However, as stated in the Annual Site Status Report for the year 2009 (Battelle, 2010b), BTEX constituents were removed from the analyte list of the majority of the wells in the groundwater monitoring program based on the following information:

- Benzene has not been detected off Navy property. The maximum concentration was detected in May 1998 at 14,000 µg/L in MW-1A; levels decreased to 15 µg/L in November 2009.
- Toluene was not detected above the MCL (1,000 µg/L) since January 1999 in monitoring well NA-6. The maximum concentration was detected in May 1998 at 8,900 µg/L in MW-1A; levels decreased to 1.7 µg/L in November 2009.
- Ethylbenzene was not detected above the MCL (700 µg/L) since February 2000 in monitoring well NA-1. The maximum concentration was detected in March 1998 at 3,200 µg/L in 970-MW4; levels decreased to 2.5 µg/L in November 2009.
- Xylenes were not detected above the MCL (10,000 µg/L) since March 1998 at 970-MW4 (at 12,000 µg/L), the maximum concentration detected at the site. At monitoring well 970-MW4, concentrations were nondetect in November 2009.

Figure 6 presents contour plume maps for BTEX constituents analyzed for during the last comprehensive groundwater sampling event (November 2009). Table 7 presents the comprehensive groundwater analytical results for BTEX in the context of the updated Tier 1 ESLs representing the groundwater final aquatic habitat goaland groundwater vapor intrusion human health risk levels for deep groundwater residential: fine to coarse scenario (Water Board, 2016). In November 2009, only two wells (MW-7A and NA-7) exhibited benzene concentrations above the Tier 1 ESL of 30 µg/L with concentrations at 51 µg/L and 39 µg/L, respectively. Monitoring well MW-7A is no longer in the monitoring well network and NA-7 represents the only monitoring well that continues to be sampled for BTEX. BTEX concentrations remain below current Tier 1 ESLs at monitoring well NA-7 with a November 2014 concentration of benzene at 7.2 µg/L, toluene at 0.71 µg/L, ethylbenzene at 1.4 µg/L and xylenes at 3.1 µg/L (Table 7). BTEX concentrations were nondetect at NA-7 during the December 2015 sampling event (Table 7).

3.3.3 MTBE. MTBE has been analyzed in groundwater at the Site from 1996 to the present. Figure 7 presents MTBE concentration contour maps for the years 2000, 2008 and 2015 showing an overall decrease in plume concentration and size. Table 8 presents the 2014 and 2015 groundwater analytical results for MTBE compared to the updated Tier 1 ESL representing the non-drinking water source nuisance odor level provided by the Water Board (Water Board, 2016). Overall MTBE concentrations in 2015 remained consistent or decreased in comparison to concentrations observed during November 2014 with the exception of nine monitoring wells. LEA-MW1 (20 µg/L to 45 µg/L) and MW-M8-BR (0.25U µg/L to 16 µg/L) are the only two monitoring wells among the nine wells to show a slight increase in MTBE concentration when compared to 2014 results as shown in Table 8. The remaining seven monitoring wells exhibited increases that ranged between 0.07 µg/L and 4 µg/L in concentrations. Historically, the maximum concentration of MTBE observed in groundwater was in monitoring wells 970-MW4 and 970-MW5 at 240,000 µg/L in 1996. The maximum concentration of MTBE is currently observed in the northern portion of the plume at 320 µg/L (22% decrease from 2014) in monitoring well LEA-MW5 (Figure 7). Overall, 47% of the 44 monitoring wells exhibited a decrease in MTBE concentration in 2015. Among the 44 monitoring wells, 14 wells exhibited a 45% reduction in concentration from November 2014. As the data indicate, the 2015 MTBE plume is continuing to shrink in area (Figure 7). No wells on site currently exhibit MTBE concentrations in groundwater exceeding the updated Tier 1 ESLs (Table 8).

MTBE mass estimates have been calculated at the Site since 1998 and presented in successive Annual Site Status Reports. As the result of multiple remedial systems, coupled with natural attenuation mechanisms occurring on site, the estimated total mass of MTBE in groundwater has decreased significantly from 287 kg (November 1998) to 12.8 kg (December 2015).

The remedial goal for MTBE of 13 µg/L was established in 2002, reflecting the MCL threshold for MTBE for a drinking water source (Battelle, 2002a) at that time. The State of California MCL threshold for MTBE has been updated to 5 µg/L (Water Board, 2016). MTBE concentrations currently exceed the updated State of California MCL in 20 of the 44 monitoring wells at the Site (Battelle, 2015) (Table 8). No domestic, irrigation, or agricultural wells are currently impacted by the dissolved-phase gasoline constituents released from the Site. A public water supply is readily available and, therefore, nuisance as defined by Water Code Section 13050 does not exist at the site. As stated in Section 2.5.1, site specific aquifer conditions observed over more than 15 years of groundwater sampling at the Site suggest:

- The yield of the aquifer would very likely meet beneficial use exemption 2 in Resolution 88-63 (i.e., a water well installed in this portion of the aquifer cannot supply a sustained yield of 200 gallons/day)

- The sustainable well yields required by Marin County are not achievable at this site (720 gallons/day)
- The sanitary seal requirements stated in the California State Well Bulletin of 50 ft bgs would place the screened interval of the wells in the bedrock unit, which exhibits even lower yields than the overlying alluvial unit.

Furthermore, land use planning documents provided by the City of Novato on its website show the area overlying the MTBE plume zoned for public recreation and open space, in which the Marin Municipal Water District requires all uses of water (used for drinking and or fire suppression) to be supplied by the District via a connection to existing water pipelines. Therefore, based on the site-specific conditions described above and the conceptual site model, the Tier 1 ESLs established by the Water Board for odor nuisance in non-drinking water are appropriate for MTBE.

3.3.4 MTBE Plume Stability. The Navy has continually evaluated statistical trends throughout the MTBE plume using parametric regression analysis, outlined in U.S. EPA (2005). Results from the November 2014 statistical evaluation were similar to previous evaluations and indicated that there is a distinct difference in MTBE concentration trends in the LEA compared to the southern area (i.e., outside of the leading edge area). The results of these evaluations have indicated that MTBE concentrations in monitoring wells located in the southern area of the plume have largely demonstrated statistically significant decreasing trends (Battelle, 2014). However, due to the northern migration of the residual MTBE mass, concentrations in some monitoring wells located in the leading edge area have demonstrated unstable to statistically significant increasing trends in seven monitoring wells (IT-GMP-15, IT-GMP-17, IT-GMP-18, IT-PZ-9, LEA-MW2, LEA-MW3, MW-M13) (Figure 7). However, it is important to note that the MTBE concentrations in all monitoring wells listed above (IT-GMP-15, IT-GMP-17, IT-GMP-18, IT-PZ-9, LEA-MW2, LEA-MW3, MW-M13) exhibited decreases in concentrations during the December 2015 sampling event. In general, the December 2015 MTBE concentration suggests trends are consistent with prior statistical trends. Overall, MTBE concentration trends over time indicate that MNA processes are most likely effectively controlling the mid-leading edge area plume migration at the northernmost edge of the leading edge area. Thus, overall, the MTBE groundwater plume is demonstrating stable conditions as confirmed in the groundwater modeling exercise described in Section 3.4. Overall, the MTBE plume is observed to be stable and not migrating along the northern most edge of the leading edge area plume as indicated by the orange line in Figure 7.

3.4 Numerical Groundwater Flow and Transport Model

An evaluation of MTBE fate and transport in groundwater at Former UST Site 957/970 was conducted in 2012 and is included in Appendix D The purpose of the evaluation was to estimate the time required for MTBE concentrations throughout the plume to fall below the California MCL of 13.0 µg/L (the remedial goal for the Site) under MNA conditions. The following section includes a brief description of the numerical groundwater flow and MTBE transport model and associated petroleum constituent transport estimates, and the summary of the evaluation. For more details on how the model was developed, see Appendix D.

A numerical groundwater flow and MTBE transport model, MODFLOW-SURFACT, which is a proprietary version of United States Geological Survey's (USGS's) MODFLOW, was constructed to assess future MTBE fate and transport. The CSM was first translated into a numerical flow and transport model. Then the model was used to reproduce key features of the observed MTBE distribution during the year 2012. Finally, once calibrated, the model was used to estimate future MTBE fate and transport to support site decision-making.

The flow model provides the foundation for the petroleum constituent transport model because constituents are transported advectively with groundwater flow. In addition, the transport model includes representation of physical processes specific to MTBE transport. The groundwater flow model was calibrated under steady-state flow conditions observed from June 2007 water levels. Two phases of history matching were then performed with the petroleum constituent transport model:

- Reproduction of travel times from the source areas to the plume leading edge
- Reproduction of petroleum constituent transport patterns in the northern half of the plume from 2002 to 2010.

During the latter transport model calibration step, MTBE degradation and sorption were increased north of the line at the leading edge of the plume shown in Figure 7, in order to successfully reproduce the empirically observed plume stability in this area from 2002 to 2010. Successful execution of these flow and transport model calibration steps lends confidence to the use of the model to estimate future petroleum constituent transport. The calibrated flow and transport model was then used to estimate future MTBE transport, starting with the November 2013 MTBE plume. The observed results were that model simulations estimate that maximum MTBE concentrations will decrease to the MTBE MCL in approximately 15 years.

A key feature in the development and calibration of the model is the observed stability of the MTBE plume along the orange line seen on the 2015 MTBE plume map in Figure 7. Upgradient of this line, similar MTBE impacts have been observed at monitoring wells screened at varying depths (Figure 8), with maximum concentrations along the plume centerline consistently in the hundreds of µg/L. In addition, the plume has migrated relatively quickly and steadily through the wells in this area. Historical sampling data indicate that MTBE arrived at IT-GMP-15, IT-PZ-9, IT-GMP-17, and IT-GMP-18 (located south to north along the plume centerline in the leading edge area) in 1998, 1998, 2000, and 2004, respectively (Battelle, 2013a). Following initial impact, MTBE concentrations in each of these wells increased steadily to the hundreds of µg/L over a period of four to six years. Given the concentration trends and timing of impacts in these wells, significant MTBE impacts would have been expected by the present at wells downgradient of the line in Figure 7. However, little to no MTBE impacts have been observed at these sentry wells, suggesting the leading edge of the plume front is stable and not migrating down gradient.

Section 4.0: RISK EVALUATION

To date, eight human health risk assessments (HHRAs) have been conducted throughout the environmental cleanup process at Former UST Site 957/970 as summarized in Table 3. The Water Board and DTSC were involved in each of these HHRAs as the local and state regulatory authorities for the project, respectively. These HHRAs were conducted in accordance with guidelines, guidance, and policies of the U.S. EPA's and DTSC's Human and Ecological Risk Office. The HHRAs focused on evaluating potential risks to future human receptors at Former UST Site 957/970 as a result of residual fuel hydrocarbons in soil and groundwater.

The risk evaluation presented below is used to support the case for site closure for former UST Site 957/970 whereby potential risk from petroleum hydrocarbons and related constituents remaining in soil and groundwater at former UST Site 957/970 is evaluated in accordance with the Water Board's *Low-Threat Underground Storage Tank Case Closure Policy* (Water Board, 2012), which establishes consistent statewide case closure criteria for low-threat petroleum UST sites. The following sections identify COPCs, define risk evaluation screening criteria, present the representative data selected, describe the evaluation methodology, and present the results of the screening evaluation for Former UST Site 957/970.

4.1 Chemicals of Potential Concern

Former UST Site 957/970 was in use as a service station from the mid-1970s through the early 1990s, when the service station was closed and the USTs were removed. Soil and groundwater at the site were contaminated with fuel hydrocarbons resulting from releases from former USTs and associated piping at the site. Gasoline constituents observed in soils and groundwater included TPH-G, BTEX, MTBE, and other fuel-related compounds.

Many environmental investigations were conducted between 1998 and 2015 at Former UST Site 957/970 and numerous environmental samples collected from soil, groundwater, and soil gas and analyzed for gasoline-related petroleum hydrocarbon constituents such as TPH, BTEX, and MTBE in addition to broad analyses for volatile organic compounds (VOCs), semivolatile organic compounds (SVOCs; including polycyclic aromatic hydrocarbons [PAHs]), and metals.

Soil underlying and adjacent to the tanks and pipes was excavated following removal of the USTs as described in ERM-WEST (1998). In July 2000, the Water Board passed Board Order No. 00-064 requiring the Navy to develop and execute a CAP for groundwater (Battelle, 2002a), which led to the selection and implementation of a biosparging system to primarily treat gasoline fuel and gasoline additives, such as BTEX and MTBE. The biosparging system operated from September 2002 until March 2005, at which time a one-year shutdown test was performed before restarting the system in March 2006 on a pulsed operation schedule. Data collection and evaluation activities throughout the biosparging operation period indicated the biosparging performance goals had been achieved. Operation of the biosparging system was discontinued in February 2009 with regulatory concurrence).

Multiple HHRAs have been conducted throughout the environmental cleanup process at the Site where COPCs were identified as residual fuel hydrocarbons and associated fuel compounds. Therefore, given the source of the release and the historical presence of petroleum hydrocarbons in soil and groundwater, this risk evaluation only addresses petroleum and target indicator chemicals in soil, groundwater, and soil gas as established in the Water Board Low-Threat Policy (Water Board, 2012).

4.2 Media-Specific Criteria

As stated in the Water Board Low-Threat Policy (2012), releases from USTs can impact human health and the environment through contact with any or all of the following contaminated media: groundwater, surface water, soil, and soil vapor. The most common drivers of health risk are ingestion of groundwater from drinking water wells, inhalation of vapors accumulated in buildings, contact with near surface contaminated soil, and inhalation of vapors in the outdoor environment.

For simplification purposes, the Water Board combined the most common exposure scenarios and developed media-specific criteria for the following:

- Groundwater
- Vapor Intrusion to Indoor Air
- Direct Contact and Outdoor Air Exposure

Media-specific criteria may be qualitative in nature and/or may be a numerical limit. Numerical limits for the following media/chemicals are provided in the Water Board Policy (2012). For groundwater, COPCs are benzene and MTBE. For soil gas, COPCs include benzene, ethylbenzene, and naphthalene. For soil, the COPCs include benzene, ethylbenzene, naphthalene, total TPH (TPH-G and TPH-D combined), and PAH (based on the seven carcinogenic PAHs as benzo(a)pyrene toxicity equivalent [BaPe]).

4.2.1 Groundwater. The medium-specific criteria for groundwater are based on State Water Board Resolution 92-49, Policies and Procedures for Investigation and Cleanup and Abatement of Discharges under Water Code Section 13304. Resolution 92-49 directs that water affected by an unauthorized release attain either background water quality or the best water quality that is reasonable if background water quality cannot be restored. Any alternative level of water quality less stringent than background must be consistent with the maximum benefit to the people of the state, not unreasonably affect current and anticipated beneficial use of affected water, and not result in water quality less than that prescribed in the water quality control plan for the basin within which the site is located. Resolution No. 92-49 does not require that the requisite level of water quality be met at the time of case closure; it specifies compliance with cleanup goals and objectives within a reasonable timeframe.

Although not officially de-designated in accordance with provisions from Water Board Resolution 88-63 (1988 and amended in 2006), impacted groundwater beneath the Site is arguably not a potential drinking water source for reasons previously stated Sections 2.5.1 and 3.3.3.

Since 1998, eight HHRAs have been conducted at Former UST Site 957/970. All of the previous HHRAs focused on evaluating potential risks to future human receptors as a result of residual fuel hydrocarbons in soil and groundwater. The HHRAs were conducted in accordance with U.S. EPA and California EPA guidance, guidelines and policy. DTSC's Human and Ecological Risk Office was involved in the planning and execution of these HHRAs and approved of the exposure scenarios evaluated in these historical documents. Scenarios that were purely hypothetical or plausible but not reasonably likely were not included based on the site specific conditions stated in Sections 2.5.1 and 3.3.3 above. In all eight HHRAs, DTSC agreed that the groundwater beneath Former UST Site 957/970 would not be used for any potable purpose and agreed that receptors only would be indirectly exposed to petroleum hydrocarbons in groundwater as a result of vapor migration into buildings. Thus, the drinking water exposure pathway is incomplete and not evaluated in this risk evaluation. The groundwater-specific criterion for vapor intrusion to indoor air is the more appropriate criterion for chemicals remaining in groundwater. The vapor intrusion to indoor air criteria are further discussed in Section 4.2.2.

4.2.2 Vapor Intrusion to Indoor Air. For the purposes of this risk evaluation, vapor intrusion to indoor air criteria are based on requirements for *Scenario 3- Dissolved Phase Benzene Concentrations in Groundwater (Low concentration groundwater scenarios with or without oxygen data)* provided in the Low-Threat Policy (Water Board, 2012). Scenario 3 criteria include benzene concentrations in groundwater, TPH concentrations in soil, and a continuous separation, or bioattenuation zone of various depth as depicted on Figure 9. In many petroleum release cases, potential human exposures to vapors are mitigated by bioattenuation processes as vapors migrate toward the ground surface. For the purposes of this evaluation, the term "bioattenuation zone" means an area of soil with conditions that support biodegradation of petroleum hydrocarbon vapors.

Although the Low-Threat Policy provides comparison criteria for direct measurement of soil gas concentrations (see *Scenario 4 - Direct Measurement of Soil Gas Concentrations* in the Low-Threat Policy) and soil gas samples have been collected from locations above the groundwater plume at Former UST Site 957/970 (refer to soil gas results in the Human Health Risk Assessment Update for Parcel 1A [Battelle, 2011]), these direct comparisons will not be used to assess risk. Under Scenario 4, the soil gas samples have to be collected from at least 5 feet bgs. Historical soil gas samples collected at Former UST Site 957/970 were obtained from 3 and 4 feet bgs.

4.2.3 Direct Contact and Outdoor Air Exposure. Comparison criteria for direct contact and outdoor air exposure were developed for the Low-Threat Policy as provided in Table 9. In order to meet these criteria, maximum concentrations of petroleum constituents in soil need to be less than or equal to those listed in Table 9 for the specified depth bgs. The concentration limits for 0 to 5 feet bgs protect from ingestion of soil, dermal contact with soil, and inhalation of volatile soil emissions and inhalation of particulate emissions. The 5 to 10 feet bgs concentration limits protect from inhalation of volatile soil emissions. Both the 0 to 5 feet bgs concentration limits and the 5 to 10 feet bgs concentration limits for the appropriate site classification (Residential or Commercial/Industrial) will need to be satisfied. In addition, if exposure to construction workers or utility trench workers are reasonably anticipated, the concentration limits for Utility Worker also need to be satisfied.

4.3 Data Selection

This risk evaluation was performed using historical data where appropriate in conjunction with the most recent data that were collected as part of the ongoing groundwater monitoring program at the Site. The following subsections provide an explanation of the analytical results that comprise the datasets for groundwater and soil. The datasets were selected because they were the most current representation of conditions in soil and groundwater. Depth to groundwater at Former UST Site 957/970 is approximately 9.5 ft bgs, although depths vary somewhat throughout the year and across the Site. For the purpose of this evaluation, soil samples collected from less than 10 feet bgs were included in the evaluation.

4.3.1 Groundwater Data. Since the initial petroleum release, concentrations of benzene have been significantly reduced as a result of active treatment on Navy property as well as attenuation mechanisms. Numerous groundwater samples from the monitoring well network associated with Former UST Site 957/90 have been collected over time and analyzed for benzene (Appendix A). Results of groundwater samples collected during the groundwater monitoring program have been reported in Semi-Annual and Annual Site Status Reports, with the most recent Annual Site Status Report being for the year 2014 (Battelle, 2015).

Figure 6 presents the most current benzene data available (November 2009) depicting the extent of benzene distribution in groundwater As shown on Figure 6, all benzene concentrations in groundwater were below 100 µg/L. As mentioned in Section 3.3.2, since November 2009, benzene (and

TEX) is only analyzed for in one monitoring well (NA-7) (Figure 7) and concentrations remain low. This is because the groundwater monitoring program is optimized annually based on decision criteria discussed in Section 5.0 of the Groundwater Monitoring Plan (Battelle, 2000b). Wells showing a statistically significant decreasing trend in concentrations are either sampled less frequently or eliminated from the monitoring program as decision criteria are met; thus, the 2009 sampling event was that last comprehensive sampling event for benzene.

For groundwater (groundwater-specific criteria for vapor intrusion to indoor air) the most current representation of groundwater conditions are included in the risk evaluation. These data include samples that were collected during the last several annual site-wide groundwater monitoring events between 2009 and 2014. The groundwater data selected for the risk evaluation is provided in Table 7. As stated above, benzene continues to be present in NA-7 at very low levels.

4.3.2 Soil Data. Residual quantities of petroleum constituents exist in soil in two localized areas where gasoline was stored and dispensed. One of the two localized areas is in the vicinity of the former UST 970 complex (i.e., USTs 970-1, 970-2, and 970-3) (Figure 2). The second localized area with petroleum constituents in soil is in the vicinity of former UST 957 (Figure 2). As mentioned in Section 3.1.1, the nature and extent of petroleum constituents in soil at the Site were determined by the hydraulic lift excavation and removal activities within Building 970 conducted from April 17, 2000 to June 22, 2000 (Battelle and RRM, 2000) and soil sampling activities conducted in September 2000 during the RI (Battelle, 2001b) performed in compliance with Task 2 of Water Board Order No 00-64. Petroleum constituent plume maps and analytical results for constituents remaining in soil are provided in these two documents as well as in the Final Revised Risk Assessment [Battelle, 2001b]). A compilation of analytical results for COPCs remaining in soil is provided in Tables 10 through 14. It is expected that concentrations detected almost 15 years ago would be much lower today because the COPCs readily biodegrade. However, these data are the only data available and so are being used to conservatively assess residual risks.

It should be noted that a remedial action for soil in the Hamilton Square Parcel (former UST Site 970 area) has been approved to address the remaining soil contamination to allow unrestricted residential development of the property to proceed in the future (West Yost Associates, 2015). Therefore, based on the fact that contaminated soils will be removed as part of the remedial action, the soils in the UST Site 970 area do not warrant further evaluation.

4.4 Evaluation Methodology

The risk evaluation was conducted in a step-wise manner as follows:

- **Step 1. Compile the Concentrations of all COPCs Detected in Soil and Groundwater:** Available soil and groundwater data representative of the most current conditions are compiled and all related COPCs detected in the samples are identified.
- **Step 2. Compare Concentrations to Media-Specific Screening Criteria:** Detected concentrations of COPCs are compared to the numerical criteria provided in the Low-Threat Policy (Water Board, 2012) provided in Table 9. Any sample for which all detected concentrations are below the screening criteria is considered not to pose a significant risk and is eliminated from further evaluation. All samples for which one or more COPC had a detected concentration that exceeds the screening criteria are further evaluated in Step 3.
- **Step 3. Additional Analyses to Support Risk Management:** Samples with COPC concentrations that exceed the criteria are further evaluated. Additional analyses may

include an evaluation of the spatial distribution of remaining petroleum hydrocarbons, examination of potentially complete exposure pathways, review of relevant exposure scenarios, and evaluation of the timing of site remedial activities relative to the sampling date.

- **Step 4. Summarize Results:** If the results from Steps 2 and 3 indicate that the detected concentrations do not pose a potential risk to human receptors currently, then the site is recommended for closure. If the results indicate that significant impacts to human receptors are possible in the future, then ICs or corrective action is recommended.

4.5 Results of the Risk Evaluation for Groundwater

This section summarizes the results of the groundwater risk evaluation performed for Former UST Site 957/970.

Step 1. Compile the Concentrations of all COPCs Detected in Groundwater: The only COPC identified for groundwater is benzene (Table 7). Vapor intrusion to indoor air is the exposure pathway being evaluated.

Step 2. Compare Concentrations to Media-Specific Screening Criteria: Scenario 3 (Figure 9) presents the media-specific criteria necessary to evaluate dissolved phase benzene in groundwater for the vapor intrusion pathway. Benzene concentrations remaining in groundwater beneath the site are less than 100 µg/L. In fact, the maximum concentration most recently detected is 7.2 µg/L in well NA-7 located in the Former UST Site 957 area (Battelle, 2015). Therefore, media-specific criteria depicted under Scenario 3 is selected as the criteria for this risk evaluation. As depicted on Figure 9, characteristics of the bioattenuation zone without oxygen data require that the bioattenuation zone be a continuous zone that provides a separation of at least 5 feet vertically between the dissolved phase benzene and the foundation of existing or potential buildings and contains total TPH (TPH-G and TPH-D combined) less than 100 mg/kg throughout the entire depth of the bioattenuation zone. The 5 feet vertical distance is met as the depth to groundwater is at least 9.5 feet bgs across the Site. As benzene in groundwater is only present in the Former UST Site 957 area, historical soil concentrations of TPH in the Former UST Site 957 area (see Table 14) are used to evaluate the bioattenuation zone. As shown on Table 14, 13 of the 16 TPH soil samples collected within the upper 5 feet of soil are less than 100 mg/kg criterion. Further evaluation of three samples above the 100 mg/kg criterion for TPH (SB-3D at 480 mg/kg; SB-8D at 300 mg/kg; and SB-9D at 200 mg/kg) is warranted as presented in Step 3.

Step 3. Additional Analyses to Support Risk Management: Three of the 16 soil samples collected in the Former UST Site 957 area exceed the TPH criterion of 100 mg/kg. As a result, further evaluation of the sampling date, timing of recent site remediation activities, and spatial distribution was conducted. Figures 10 and 11 show historical concentration contours of TPH-G and TPH-D in soil for each of the sampling locations within the Former UST 957 area. Elevated TPH results were only found within the upper 5 feet of soil and are spread out within the former UST area. Concentrations detected beneath these samples are one to two orders of magnitude lower and well below the 100 mg/kg criterion. Therefore, the vertical extent of elevated TPH is limited. An average TPH concentration for the upper 5 feet of soil within the Former UST Site 957 area is approximately 34 mg/kg, which is well below the 100 mg/kg criterion.

Step 4. Groundwater Summary: Residual concentrations of benzene in groundwater beneath the site are less than 10 µg/L. The extent of benzene is limited to the Former UST Site 957 area. Elevated TPH-impacted soil in the Former UST Site 957 area is limited in horizontal and vertical extent as discussed in Step 3. Biodegradation and other natural attenuation processes are expected to continue to reduce

concentrations of total TPH in soil and benzene in groundwater over time. Based on the results of Steps 2 and 3, remaining elevated concentrations of total TPH in the Former UST Site 957 area is not likely to contribute a vapor intrusion risk to human receptors. Therefore, NFA with respect to petroleum hydrocarbons in groundwater is recommended for the site.

4.6 Results of the Risk Evaluation for Soil

This section summarizes the results of the step-wise risk evaluation for soil performed for Former UST 957/970.

Step 1. Compile the Concentrations of all COPCs Detected in Soil: The COPCs identified for soil associated with the Former UST Site 957/970 and hydraulic lift areas within Building 970 include benzene, ethylbenzene, and naphthalene (Table 9). For the waste oil line near Building 970, COPCs include benzene, ethylbenzene, naphthalene, and PAH (Table 9).

Step 2. Compare Concentrations to Media-Specific Screening Criteria: Concentrations of the COPCs detected in soil between 0 to 5.5 ft bgs (i.e., shallow depth) were compared to both the residential and commercial/industrial media-specific criteria. Table 15 summarizes the COPCs detected and provides a comparison of concentrations detected to the media-specific criteria. All COPC concentrations were less than the more stringent residential criteria.

Concentrations of the COPCs detected in soil that were greater than 5.5 ft bgs (i.e., deep) were compared to both the residential and commercial/industrial media-specific criteria. Table 16 summarizes the COPCs detected and provides a comparison of concentrations detected to the media-specific criteria. All COPC concentrations were less than the more stringent residential criteria.

For the waste oil line soil data (Table 16), PAH data were not available; however, data for total SVOCs were available. Total SVOCs would have included measurements for PAHs. Two sampling locations contained nondetect, but elevated detection limits for the SVOC totals. Overexcavation was performed in these areas to remove the elevated concentrations (Battelle, 2000a).

Based on the comparison to media-specific criteria, residual concentrations of petroleum hydrocarbon constituents in soil will have no significant risk of adversely affecting human health. No further evaluation is necessary.

Section 5.0: LOW-RISK CRITERIA EVALUATION

Former UST Site 957/970 meets all of the general criteria (A through H) outlined in the Water Board's *Low-Threat Underground Storage Tank Case Closure Policy* (Water Board, 2012). Furthermore, Former UST Site 957/970 meets media-specific criteria for groundwater (Class 4; B through D), vapor intrusion (A through C), direct contact and outdoor air exposure (A through C). The following table presents each of the criteria and evidence that the site meets the low-threat criteria:

Criteria	
General Criteria	**Met at Former UST Site 957/970?**
A. The unauthorized release is located within the service area of a public water system.	YES
B. The unauthorized release consists only of petroleum.	YES
C. The unauthorized ("primary") release from the UST system has been stopped.	YES
D. Free product has been removed to the maximum extent practicable.	YES
E. A CSM that assesses the nature, extent, and mobility of the release has been developed.	YES
F. Secondary source has been removed to the extent practicable.	YES
G. Soil or groundwater has been tested for MTBE and results reported in accordance with Health and Safety Code Section 25296.15.	YES
H. Nuisance as defined by Water Code Section 13050 does not exist at the site.	YES
California Water Code Section 13050 (m), defines nuisance as anything which meets all of the following requirements: A. Is injurious to health, or is indecent or offensive to the senses, or an obstruction to the free use of property, so as to interfere with the comfortable enjoyment of life or property.	NO
B. Affects at the same time an entire community or neighborhood, or any considerable number of persons, although the extent of the annoyance or damage inflicted upon individuals may be unequal.	NO
C. Occurs during, or as a result of, the treatment or disposal of wastes.	NO
Media-Specific Criteria ***(1. Groundwater, 2. Vapor Intrusion to Indoor Air, 3. Direct Contact and Outdoor Air Exposure)***	

Criteria	
General Criteria	**Met at Former UST Site 957/970?**
1. **Groundwater (Class 4 and 5)**	
Class 4	
A. The contaminant plume that exceeds water quality objectives is less than 1,000 feet in length.	NO – largest portion of the current MTBE plume is approximately 2,400 ft in length. However, the leading edge area of the plume is stable as depicted by the orange line in Figure 7. In addition, 65% (15 of 23) of the monitoring wells in the leading edge area and 96% (25 of 26) of the monitoring wells in the upgradient area have shown a statistically significant decreasing trend or nondetect concentrations (Battelle, 2015).
B. There is no free product.	YES
C. The nearest existing water supply well or surface water body is greater than 1,000 feet from the defined plume boundary.	Groundwater: YES. Based on a domestic and municipal water well search on Geotracker, no water supply well exists within 1,000 ft of the defined plume boundary. Surface Water: NO. Pacheco Creek runs through the site. It should be noted that Pacheco Creek is an intermittent stream where continuous flow is only observed during the wet season. During the dry season the stream is series of disconnected shallow pools.
D. The dissolved concentration of benzene is less than 1,000 µg/L, and the dissolved concentration of MTBE is less than 1,000 µg/L.	YES – in December 2015, benzene concentrations at NA-7 were nondetect, and the highest MTBE concentration at LEA-MW5 was 320 µg/L.
Class 5	
A. The regulatory agency determines, based on an analysis of site specific conditions that under current and reasonably anticipated near-term future scenarios, the contaminant plume poses a low threat to human health and safety and to the environment and water quality objectives will be achieved within a reasonable time frame.	YES – analysis of groundwater data and fate and transport modeling indicate that MTBE is not migrating at the leading edge front of the plume, and concentrations are decreasing in the southern portion of the plume. Fate and transport groundwater modeling suggests the final cleanup goal for MTBE of 13 µg/L can be achieved via MNA in approximately 15 years.
2. **Vapor Intrusion to Indoor Air**	
A. Site-specific conditions at the release site satisfy all of the characteristics and criteria of scenarios 1 through 3 as applicable, or all of the characteristics and criteria of scenario 4 as applicable; or	YES
B. A site-specific risk assessment for the vapor intrusion pathway is conducted and demonstrates that human health is protected to the satisfaction of the regulatory agency; or	YES
C. As a result of controlling exposure through the use of mitigation measures or through the use of institutional or engineering controls, the regulatory agency determines that	YES

Criteria	
General Criteria	**Met at Former UST Site 957/970?**
petroleum vapors migrating from soil or groundwater will have no significant risk of adversely affecting human health.	
3. **Direct Contact and Outdoor Air Exposure**	
A. Maximum concentrations of petroleum constituents in soil are less than or equal to those listed in Table 1 for the specified depth bgs. The concentration limits for 0 to 5 feet bgs protect from ingestion of soil, dermal contact with soil, and inhalation of volatile soil emissions and inhalation of particulate emissions. The 5 to 10 feet bgs concentration limits protect from inhalation of volatile soil emissions. Both the 0 to 5 feet bgs concentration limits and the 5 to 10 feet bgs concentration limits for the appropriate site classification (Residential or Commercial/Industrial) shall be satisfied. In addition, if exposure to construction workers or utility trench workers are reasonably anticipated, the concentration limits for Utility Worker shall also be satisfied; or	YES
B. Maximum concentrations of petroleum constituents in soil are less than levels that a site specific risk assessment demonstrates will have no significant risk of adversely affecting human health; or	YES (Battelle, 2011)
C. As a result of controlling exposure through the use of mitigation measures or through the use of institutional or engineering controls, the regulatory agency determines that the concentrations of petroleum constituents in soil will have no significant risk of adversely affecting human health.	YES – there are ICs in place to protect human health.

Although the MTBE plume length and proximity to a surface water body remain the only Low-Threat Closure Policy criteria not met as outlined in the *Low-Threat Underground Storage Tank Case Closure Policy* (Water Board, 2012*),* it is the Navy's position that this report shows that there are multiple lines of evidence indicating Former UST Site 957/970 presents a low threat to human health, the environment, and the drinking water resources of the State of California.

Section 6.0: CONCLUSIONS AND RECOMENDATIONS

The Navy has removed the source of any future petroleum-related contamination to the soil and groundwater at Former UST Site 957/970. Following source removal, from 1998 to 2011, multiple successful remedial actions have been implemented at the Site. As a result, MTBE, BTEX, TPH, and other petroleum-related constituents from soil and groundwater have been significantly reduced compared to baseline conditions prior to remediation.

MTBE is currently the only petroleum constituent undergoing regular monitoring and reporting at the Site. The cleanup goal for MTBE of 13 µg/L, which is consistent with the MCL for a drinking water source (Water Board, 2000; Battelle, 2002a) is exceeded in 15 of the 44 monitoring wells monitored during the 2015 annual groundwater sampling events (Table 8). However, the Site is currently not a drinking water source and will most likely never serve as one for several reasons:

- Well purge data and field observations made since regular groundwater monitoring started in 1998 suggest that the sustainable yield requirements of 200 gallons/day (Water Board Resolution 88-63 [1988 and amended in 2006]) and 720 gallons/day (Marin County) cannot be met.
- Drinking water wells would be screened in the bedrock unit at the Site, which further suggests the applicable yield requirements could not be met because the sanitary seal standards stated in California Well Bulletin 74-81 through 74-90 Section 9, require the annular surface seal for an individual domestic water well and community water supply well to extend from ground surface to a minimum depth of 20 and 50 ft bgs, respectively.
- The entire area overlying the MTBE plume is designated and zoned by the City of Novato to be used for public recreation and open space, and development approval requires the utilization of the existing Marin Municipal Water District water supply for drinking water and fire suppression.
- In the extremely unlikely event that a well permit application was to be approved for a water supply well within 600 ft of the MTBE plume, organic chemical testing would need to be performed as per Marin County Water Code: CCR -Title 22, Chapter 15, Articles 3, 4, 5.5, 16 Marin County Code: Sec. 7.28.10 in areas considered vulnerable to past or current contamination (i.e., fuel tanks like those at UST Site 957/9970 and landfills like Landfill 26).
- Furthermore, based on a phone conversation with the supervisor of the Lands Department at Marin Department of Environmental Health Services (DEHS), if the conclusion of this Site Closure Report is that no water supply wells should be installed in the aquifer at the Site (on former Navy property and the property in the leading edge area now owned by the City of Novato), the County would abide by the recommendation and not allow water supply wells to be installed in the affected aquifer in the future (Marin County DEHS, 2015, Appendix C).

No domestic, irrigation, or agricultural wells are currently impacted by the dissolved-phase gasoline constituents released from the Site. As stated above a public water supply is readily available via Marin Municipal Water District and, therefore, nuisance as defined by Water Code Section 13050 does not exist at the site. Therefore, the Tier 1 established by the Water Board for odor nuisance in non-drinking water are more appropriate given the specific water quality and hydrogeologic conditions observed at the Site. Based on the latest groundwater analytical data available, Tier 1 ESLs for vapor

intrusion of MTBE BTEX and TPH-G (more conservative aquatic habitat goals) have been met as shown in Tables 6 through 8.

A multiple lines of evidence approach is presented in this Site Closure Report and summarized below to support a recommendation for site closure:

- Statistically significant decreasing MTBE concentration trends are observed throughout the majority of the MTBE plume footprint over the 15 years since remedial actions began, suggesting natural bioattenuation mechanisms are functioning to degrade petroleum-related products in soil and groundwater (i.e., MNA) and these mechanisms will continue to degrade MTBE. The MTBE analytical results in groundwater from the 2015 annual sampling event suggests that this trend is continuing Overall, 47% of the 44 monitoring wells exhibited a decrease in MTBE concentration in 2015. Among the 44 monitoring wells, 14 wells exhibited a 45% reduction in concentration from November 2014 data supporting the natural bioattenuation mechanism at the site.
- Only seven monitoring wells (14%) located in the leading edge area demonstrated a statistically significant increasing trend in MTBE concentrations from November 2014 data at the Site. The MTBE concentrations from December 2015 are generally consistent or lower than concentrations from November 2014 indicating a similar trend. An empirically calibrated numerical fate and transport groundwater model was developed and indicates the MTBE plume is not migrating at the leading edge front of the plume, and MCLs are attainable through MNA processes in approximately 15 years.
- Results from the risk-based screening evaluation conducted for soil, soil gas, and groundwater show Former UST Site 957/970 poses a low threat to human health and safety and to the environment.
- A low-threat evaluation of Former UST Site 957/970 utilizing the data presented in this report and following the *Low-Threat Underground Storage Tank Case Closure Policy* developed by the Water Board (Water Board, 2012) resulted in only two criteria not being met (i.e., the MTBE plume length is greater than 1000 ft and its proximity to a surface water body).
- TPH-G was sampled during the December 2015 sampling event in eight groundwater monitoring wells to address a TPH-G data gap identified by the Water Board through its evaluation of the Site Closure Report. TPH-G was detected in only two of the eight monitoring wells (970-MW4 [55 µg/L] and NA-7 [4,400 µg/L]) sampled (Table 6). TPH-G concentrations in 970-MW4 have decreased by 98% since 2006. The maximum TPH-G concentration observed in December 2015 was in monitoring well NA-7 with a concentration of 4,400 µg/L. TPH-G concentrations in NA-7 have decreased from 30,000 µg/L in 1999 to 4,400 µg/L in December 2015. The 2015 TPH-G concentrations in NA-7 of 4,400 µg/L suggest residual TPH-G is present at this location. However, it is important to note that downgradient well 957-MW4, screened (8 to 18 ft bgs) in the same interval as NA-7 (10 to 15 ft bgs), was nondetect, suggesting that the residual TPH-G is not migrating and natural bioattenuation mechanisms are occurring to degrade petroleum-related products and resulting in a low threat to human health and safety and to the environment. Overall, the plume area has also significantly decreased (Figure 6). TPH-G was nondetect in the remaining seven monitoring wells confirming that natural bioattenuation mechanisms are occurring to degrade petroleum-related products e resulting in a low threat to human health and safety and to the environment.

Based on these multiple lines of evidence presented in this report, the Navy requests site closure with NFA for petroleum constituents at Former UST Site 957/970.

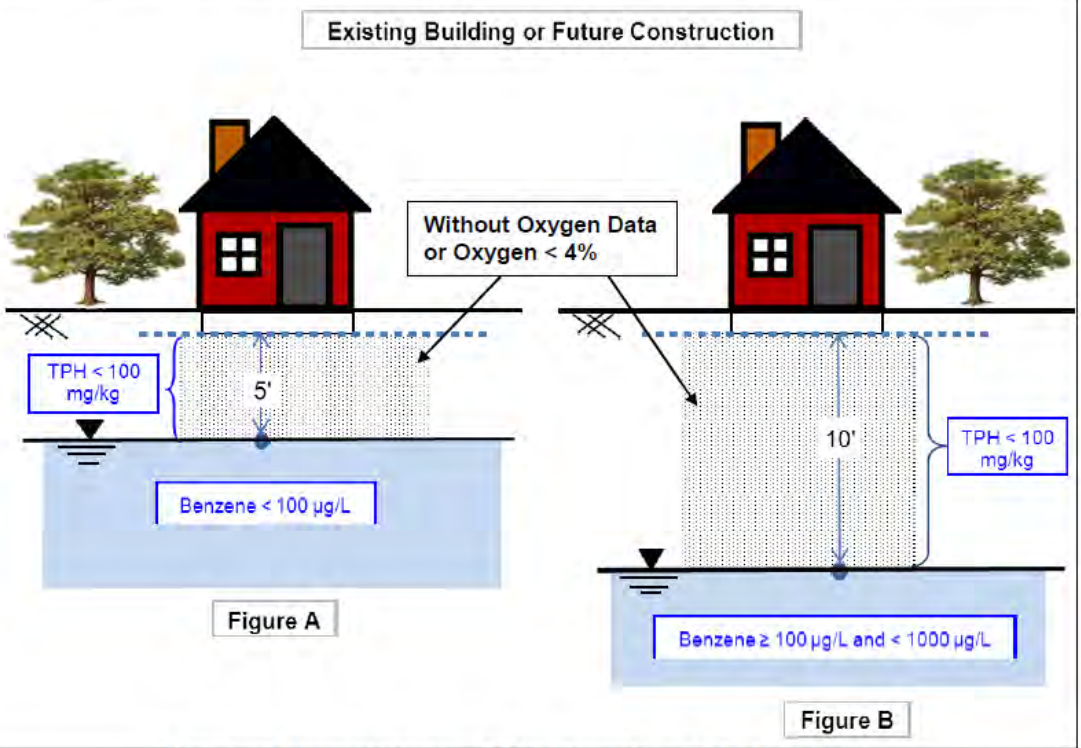
Scenario 3 - Dissolved Phase Benzene Concentrations in Groundwater (Low concentration groundwater scenarios with or without oxygen data)

Defining the Bioattenuation Zone Without Oxygen Data or Oxygen < 4%



Required Characteristics of Bioattenuation Zone for Sites Without Oxygen Data or Where Oxygen is < 4%

Figure A: 1) Where benzene concentrations are less than 100 µg/L, the bioattenuation zone:

a) Shall be a continuous zone that provides a separation of at least 5 feet vertically between the dissolved phase Benzene and the foundation of existing or potential buildings; and
b) Contain Total TPH (TPH-g and TPH-d combined) less than 100 mg/kg throughout the entire depth of the bioattenuation zone.

Figure B: 1) Where benzene concentrations are equal to or greater than 100 µg/L but less than 1000 µg/L, the bioattenuation zone:

a) Shall be a continuous zone that provides a separation of at least 10 feet vertically between the dissolved phase Benzene and the foundation of existing or potential buildings; and b) Contain Total TPH (TPH-g and TPH-d combined) less than 100 mg/kg throughout the entire depth of the bioattenuation zone.

TABLES

Table 1. Completed Tasks Relevant to Water Board Oder 00-064

Task	Achieved	Supporting Document	Water Board Concurrence
Task 1: Work Plan for Remedial Investigation –submit a workplan acceptable to the Executive Officer to define the vertical and horizontal extent of soil and groundwater contamination at the Site.	August 30, 2000	Final Work Plan for Remedial Investigation of Former UST Site 957/970 at Department of Defense Housing Facility Novato, California	March, 2002
Task 2: Completion of Remedial Investigation –submit a technical report acceptable to the Executive Officer documenting completion of the tasks identified in Task 1 workplan.	January 31, 2001	Final Remedial Investigation Report for Former UST Site 957/970 at Department of Defense Housing Facility, Novato, California.	March, 2002
Task 3: Interim Remedial Action Work Plan for Soil –submit a workplan acceptable to the Executive Officer evaluating interim remedial action alternatives for hydrocarbon-impacted soil of significant concentration, identified in Task No. 1 and in the vicinity of the former Site USTs, ancillary piping, and hydraulic lifts, as appropriate.	July, 2000	Draft Summary Report for Hydraulic Lift and Oil/Water Separator Removal from Building 970, Department of Defense Housing Facility (DoDHF) Novato, California.	April, 2003
Task 4: Completion of Interim Remedial Action for Soil – complete the work and submit a technical report acceptable to the Executive Officer.	July, 2000	Draft Summary Report for Hydraulic Lift and Oil/Water Separator Removal from Building 970, Department of Defense Housing Facility (DoDHF) Novato, California.	April, 2003
Task 5: Monitoring Well Protection Plan –submit a workplan acceptable to the Executive Officer that presents a monitoring well protection and management strategy/plan given the nature and magnitude of proposed site redevelopment/construction activities.	September 13, 2000	Monitoring Well Protection Plan for Former UST Site 957/970 at Department of Defense Housing Facility, Novato, California, Revision 1.0 Final	March, 2002
Task 6: Proposed Final Corrective Action Plan for Groundwater – submit a workplan acceptable to the Executive Officer that includes: 1. Stabilize and contain the higher concentration MTBE groundwater plume on the currently Navy-owned portion of the Site. 2. Remediate the highest concentrations of soil pollution detected.	August, 2001	Final Corrective Action Plan for Groundwater for Former Underground Storage Tank Site 957/970, Department of Defense Housing Facility, Novato, CA	December, 2001

Table 1. Completed Tasks Relevant to Water Board Oder 00-064 (Continued)

Task	Achieved	Supporting Document	Water Board Concurrence
3. Reduce and remediate the concentrations of MTBE in Site groundwater. 4. Reduce and remediate the concentrations of benzene in Site groundwater which exceed applicable risk based screening levels (RBSLs).			
Task 7: Interim Site Controls on Soil and Groundwater (completed) – after consulting with interested parties, prepare and submit a report, acceptable to the Executive Officer, of interim controls to be placed on the excavation of polluted Site soils and extraction and discharge of polluted Site groundwater in order to protect human health and the environment prior to the completion of a final remedial action at the Site pursuant to Task 6.	November 11, 2001	Interim Site Control Plan for the Department of Defense Housing Facility, Novato, California.	March, 2002
Task 8: Groundwater Monitoring Plan – submit a Groundwater Monitoring Plan, acceptable to the Executive Officer, that describes the procedures for conducting quarterly groundwater elevation measurements and quarterly sampling of existing and proposed wells located on Site 957/970 and the adjoining Army property (HAAF) to the north.	January 28, 2013 - "evergreen", ongoing,	Final Groundwater Monitoring Plan for Former UST Site 957/970 at Department of Defense Housing Facility, Novato, California.	March, 2002
Task 9: Site Status Reports –submit Quarterly Site Status Reports, acceptable to the Executive Officer that present the results of each quarterly groundwater/surface water monitoring event. The reports shall include all data gathered and observations made during each sampling event, a summary of findings, potentiometric maps, and tabulated groundwater level measurements and groundwater analytical reports for all pollutants analyzed.	July 24 2014 - "evergreen", on going	Annual Site Status Report for the Year 2012, UST Site 957/970, Former Department of Defense Housing Facility Novato, California.	Pending

Table 3. Summary of Investigations and Remediation at Former UST Site 957/970

Investigation/Remediation	Activity	Date	Analysis	Description
Removal of UST 957	UST Removal	March 1992	TPH/BTEX	After tank removal, underlying and adjacent soil was excavated, resulting in an excavation of 28 ft by 30 ft by 12 ft. Groundwater was encountered at 11 ft bgs. Underground piping from the UST to the pump island (109 ft) and vent lines from the tank (10 ft) were removed. The piping trenches were over excavated to depths of 2 to 4 ft bgs. Two confirmatory soil samples were collected from the north and south sidewalls of the UST excavation.
Direct Push Investigation/Monitoring Well Installation	Soil and Groundwater Sampling/Install Monitoring Wells	December 1994	TPH-G/TPH-D/BTEX/MTBE/ Total Lead	Screening level soil and groundwater sampling was conducted in the area surrounding former UST 957 using a Geoprobe™. The investigation included the collection of 64 soil samples from 39 discrete locations in and around the areas of the former USTs. Soil sampling locations were collected from a depth of 5 ft bgs and a depth of 8 to 10 ft bgs. Free product observed in vicinity of UST 957 and monitoring well 970-MW5. Samples from the initial investigations were analyzed for TPH and BTEX only.
Removal of UST 970-3	UST Removal	January 1995	TPH-G /BTEX	Gasoline was observed in water and soils during the excavation activities, and a hole was observed in the tank. Following removal of UST 970-3 and associated piping, two soil samples and one water sample were collected from the excavation and analyzed for TPH-G and BTEX.
Removal of UST 970-Waste Oil	UST Removal	January 1995	TPH-G /TPH-D/TPH-MO/TPH-JF/BTEX/	The tank appeared to be in good condition upon removal and confirmation soil sampling indicated that hydrocarbon impact was below applicable guidelines. For additional information concerning the tank removal activities and results refer to the Final UST Investigation Report for Former Underground Storage Tank Site 957/970 (ERM-West, Inc., 1998).

Table 3. Summary of Investigations and Remediation at Former UST Site 957/970 (Continued)

Investigation/Remediation	Activity	Date	Analysis	Description
Direct Push Investigation	Soil and Groundwater Sampling	November 1995	TPH-G /TPH-D/BTEX	Soil and groundwater sampling were conducted in the area of former UST 970-3 using a Geoprobe™.
Direct Push Investigation/Monitoring Well Installation	Soil and Groundwater Sampling	January/October 1996	TPH-G /TPH-D/BTEX	Soil and groundwater sampling were conducted in the area of former UST 970-3 using a Geoprobe™. Six additional permanent monitoring wells (five in the vicinity of former 970 USTs and one in the vicinity of former UST 957) were installed.
Site Characterization and Analysis Penetrometer System (SCAPS)	Soil and Groundwater Sampling	May 1996	TPH/TPH-G/BTEX/MTBE	The investigation focused on the NEX gas station area around Building 970. The investigation extended the area sampled to the southern (UST 970) portion of the Site, and included 23 pushes ranging from 4.6 to 23 ft bgs and 13 groundwater samples were collected from approximately 9 ft bgs.
Removal of UST 970-1 and UST 970-2	UST Removal	July 1996	TPH-G/BTEX/ MTBE	Five soil samples were collected from the north, south, and east sidewalls of the excavation upon removal of the USTs. All soil samples were analyzed for TPH-G and BTEX. One groundwater sample was collected from the tank pit and analyzed for TPH-G. Analysis of soil samples collected beneath the pump island piping found TPH-G and BTEX in soil.
Well Installation	Groundwater Monitoring Well Installation	October 1996	TPH-G/BTEX	Installed six additional permanent monitoring wells (five in the vicinity of former 970 USTs and one in the vicinity of former UST 957).
Direct Push Investigation	Groundwater Sampling	July 1997	MTBE	MTBE became a concern at the site. The investigation was conducted using a Geoprobe™ for screening level site characterization of MTBE concentrations in groundwater.
Groundwater Monitoring (Quarterly)	Groundwater Sampling	1998	TPH-P/BTEX/MTBE	The scope of the groundwater monitoring program conducted in a comprehensive set of wells each quarter includes the measurement of water levels, sufficient purging of each well, and the collection of groundwater samples. Groundwater samples collected at the Site were analyzed for TPH-G, BTEX and MTBE.
Tier 1 Risk-Based Corrective Action (RBCA) Assessment	Risk Assessment	February 1998	Soil: TPH-G, BTEX, MTBE Groundwater: TPH-G, BTEX, MTBE	This assessment confirmed that some gasoline constituents, including benzene and MTBE, existed at greater than Tier 1 "lookup table" values that are protective of human health under conservative assumptions. These values did not take into consideration site-specific conditions.
IAS/SVE	Remedial System Install	April 1998	BTEX/MTBE	Air sparging with soil vapor extraction (SVE) was used to reduce mass that could have been serving as a source of hydrocarbons to groundwater. The system included 10 air sparging wells and 6 SVE wells arranged to treat 4 "hot spots." An estimated 23,000 lbs. of gasoline were calculated to have been removed through the soil vapor extraction system.
Well Installation	Monitoring Well Network Installation	May 1998	NA	An extensive groundwater monitoring well network was installed at the site. The network included 18 groundwater monitoring wells for routine sampling (designated MW), 8 groundwater monitoring wells for evaluating natural attenuation rates (designated NA), 4 multilevel soil gas and groundwater monitoring points for evaluating system operation (designated MP).
Direct Push Investigation	Groundwater Sampling	May 1998	BTEX/MTBE	A limited investigation was performed using a CPT to delineate the boundaries of the MTBE groundwater plume. A total of 15 borings were advanced and 12 groundwater samples were collected from the CPT push locations. This investigation was also based on the previous delineation, but was expanded to over 200 ft beyond the boundaries identified by previous contractors. This investigation also failed to identify the boundaries of the existing MTBE in groundwater at the Site.
Soil Gas Sample Collection	Soil Gas Sampling	June 1998	BTEX/MTBE	Soil gas from beneath Building 973 was collected and analyzed to initially characterize the concentration profile of VOCs like BTEX and MTBE in the soil void spaces from the water table to the building foundation.
Direct Push Investigation	Groundwater Sampling	August 1998	BTEX/MTBE	Another investigation using a CPT was performed that delineated the MTBE plume. A total of 26 CPT borings were advanced during the investigation. The MTBE plume was found to extend 1,400 ft downgradient (north) beyond the boundaries previously identified, and was observed to have a width of approximately 600 ft. The MTBE plume was found to extend 1,400 ft downgradient (north) beyond the boundaries previously identified, and was observed to have a width of approximately 600 ft.
IAS/SVE Expansion	IAS/SVE Expansion	October 1998	BTEX/MTBE	Groundwater monitoring results from permanent wells not available at the time of pilot system design and installation indicated that greater concentrations of gasoline constituents existed outside the areas treated by the interim (pilot) action system. The system was therefore expanded to almost twice its originally designed capacity to ensure that effective hot spot remediation was achieved. During expansion activities, an additional 8 sparge wells and 7 SVE wells were installed at the Site.
Groundwater Fate and Transport	Groundwater Modeling	November 1998	MTBE	Because of the absence of historical groundwater monitoring data for the Site, an effort was begun to predict the future behavior of MTBE in groundwater at the Site. Aquifer parameters were entered into a numerical model to estimate the likely behavior of the MTBE plume. All site characterization information was assimilated and incorporated into a site conceptual model. This conceptual model was used as a "living" representation of typical site conditions, exposure pathways, and future land uses, and was updated and revised as new information became available

Table 3. Summary of Investigations and Remediation at Former UST Site 957/970 (Continued)

Investigation/Remediation	Activity	Date	Analysis	Description
Monitoring Well Installation	Groundwater Sampling	December 1998	NA	Additional permanent monitoring wells were installed around the perimeter and within the MTBE groundwater plume. These new wells, as well as selected wells installed by the United States Army Corps of Engineers (USACE) were monitored monthly for four (4) months to ensure that the MTBE plume had been adequately delineated, and quarterly thereafter.
Groundwater Monitoring (Quarterly)	Groundwater Sampling	1998	TPH-G/BTEX/MTBE	Groundwater samples were collected from 36 monitoring wells using low-flow purging methods.
Tier 2 RBCA Assessment	Risk Assessment	March 1999	Soil: TPH-G, BTEX, MTBE Groundwater: TPH-G, BTEX, MTBE	This assessment incorporated responses to comments from the Water Board on the Tier 1 RBCA Assessment, as well as some limited site-specific parameters, such as soil porosity, bulk density, and depth to the water table. The Tier 2 RBCA Assessment also found that existing benzene and MTBE concentrations exceeded those protective of human health. However, the most restrictive exposure pathway (volatilization of VOCs from groundwater to indoor air) was believed to incorporate incorrect and incomplete assumptions. A Tier 3 RBCA Assessment was planned that would include extensive site-specific data related to that exposure pathway.
MNA Evaluation	Historic Groundwater Monitoring and Purged Water Quality Information Used in Evaluation	April 1999	NA	Groundwater monitoring and purged water quality information collected over time was used to perform a preliminary evaluation of the potential for the Site to be remediated by natural attenuation mechanisms. This preliminary evaluation indicated that TPH and BTEX were stable in groundwater. MTBE was not included in this evaluation due to insufficient time series data.
Tier 3 RBCA Assessment	Risk Assessment	July 1999	Soil: TPH-G, BTEX, MTBE Groundwater: TPH-G, BTEX, MTBE	This report included a detailed evaluation of the volatilization from groundwater to indoor air pathway and incorporated results from direct air sampling and soil-gas sampling performed at the Site. This detailed evaluation revealed that existing concentrations of BTEX and MTBE were very near or below protective concentrations. Comments from the Water Board on the Tier 3 RBCA Assessment included two substantive requests for further assessment: (1) confirmation soil-gas sampling under worst case conditions at the end of the dry season when dry soils would be most conducive to vapor transport, and (2) more detailed assessment concerning the potential exposure of the ingestion of homegrown fruits and vegetables.
Groundwater Monitoring	Groundwater Sampling	1999	TPH-G/BTEX/MTBE	Groundwater samples were collected from 52 monitoring wells using low-flow purging methods.
Well Abandonment	Abandon Monitoring Wells	August 1999	NA	Four monitoring wells abandoned.
Revised Tier 3 RBCA Assessment	Risk Assessment	October 1999	Soil: TPH-G, BTEX, MTBE Groundwater: TPH-G, BTEX, MTBE	A revised and Final Tier 3 RBCA Assessment was prepared by the Navy that included results of confirmation soil-gas sampling and the expanded assessment of the ingestion of homegrown fruits and vegetables potential exposure pathway as requested by the Water Board.
Draft Ecological Risk Assessment	Risk Assessment	December 1999	Soil: TPH-G, BTEX, MTBE Groundwater: TPH-G, BTEX, MTBE	Draft Ecological Risk Scoping Assessment was performed by the Navy and submitted to the Water Board. The assessment included areas of the Site and former HAAF property (i.e., Pacheco Creek).
Groundwater Monitoring (Quarterly)	Groundwater Sampling and Surface Water Sampling	2000	TPH-G/BTEX/MTBE	Groundwater samples were collected from 70 monitoring wells on a quarterly basis using low-flow purging methods. Eight surface water samples were collected from Pacheco Creek.
Removal of Hydraulic Lift and Oil/Water Separator in Building 970	Hydraulic Lift Removal	April 2000	TPH/Metals	The activities followed procedures outlined in the Final Work Plan for Hydraulic Lift and Oil/Water Separator Removal, which was submitted to and approved by the Water Board in March 2000 (Battelle, 2000e). During removal activities, petroleum hydrocarbon-impacted soil was encountered near both units, around Drums 1 and 2, and beneath and around the foundations in the northern and northwestern portions of Building 970. The finding of unexpected subsurface lines and features (i.e., an additional oil/water separator) extended and expanded field excavation activities, and several locations required over excavation and confirmation sampling. Excavation and backfilling activities were completed in May, and soil disposal was completed in June...
Surface Water Sampling	Surface Water Sampling at Pacheco Creek	June 2000	BTEX/MTBE	Surface water monitoring at four (4) locations within Pacheco Creek began. Following receipt of the analytical results, four (4) additional locations associated with culvert outfalls were sampled to determine whether the culverts were likely sources of MTBE in Pacheco Creek.

Table 3. Summary of Investigations and Remediation at Former UST Site 957/970 (Continued)

Investigation/Remediation	Activity	Date	Analysis	Description
Remedial Investigation Activities	Remedial Investigation	September 2000	TPH/TPH-G/TPH-D/TPH-MO	A GeoprobeTM was used to collect soil samples from 20 locations in the vicinity of the former UST 970 complex (within the Sale Area) and 16 locations in the vicinity of the former UST 957 (within the PBC Area) to confirm that a residual source adding gasoline mass to groundwater does not exist in shallow and smear zone soils at these locations. Soil samples also were collected at four locations near the former UST 970 complex. In the Sale Area, a total of 46 soil samples were collected using and 32 soil samples were collected in the PBC Area. The physical and chemical properties of a three-dimensional volume of soil in this area were characterized using CPT methods. The lithology south of State Access Road was investigated by performing CPT pushes at 42 locations along four transects that were oriented perpendicular to the groundwater flow direction. A total of 20 groundwater samples were obtained using a Hydropunch™.
Groundwater Sampling	Quarterly Groundwater Monitoring	2000	TPH-G BTEX/MTBE	A quarterly Site Status Report presenting the results of groundwater and surface water monitoring activities performed in August was prepared by the Navy and submitted to the Water Board in compliance with Order No. 00-064 Task 9. The Navy will continue to submit quarterly status reports in compliance with Order No. 00-064 Task 9
Final Revised Risk Assessment Report for Former UST Site 957/970	Risk Assessment	March 2001	Soil: 1,2,4-TMB, 1,3,5-TMB, BTEX, Cumene, MTBE, Naphthalene, n-Propylbenzene, sec-Butylbenzene Groundwater: BTEX, MTBE Soil Gas: 1,2,4-TMB, 1,3,5-TMB, BTEX, Cumene, MTBE, Naphthalene, n-Propylbenzene, sec-Butylbenzene, Cymene	Conducted in response to comments provided by DTSC on the Tier 3 RBCA assessment. Results indicated that MTBE and other gasoline constituents in groundwater did not pose a threat to human health or ecological receptors.
Groundwater Monitoring (Quarterly)	Groundwater and Surface Water Sampling	2001	TPH-G/BTEX/MTBE	Groundwater samples were collected from 77 monitoring wells using low-flow purging methods. 6 surface water samples were collected from Pacheco Creek.
Groundwater Monitoring (Quarterly)	Groundwater and Surface Water Sampling	2002	TPH-G /BTEX/MTBE	Groundwater samples were collected from 77 monitoring wells using low-flow purging methods. 6 surface water samples were collected from Pacheco Creek.
Biosparge Installation	Biosparge System Installation	September 2002	BTEX/MTBE/TBF/TBA	Biosparge system initiated at Former UST Site 970/965. This remediation system was temporarily shut down for one year (from March 2005 to March 2006) with approval from the San Francisco Bay Regional Water Quality Control Board (Water Board) because asymptotic mass removal was achieved by the system. No significant rebound of MTBE concentrations was observed during this interim shutdown phase. The system was restarted in March 2006 and operated on a pulsed schedule until January 2009.
Groundwater Monitoring (Quarterly)	Groundwater and Surface Water Sampling	2003	TPH-P/BTEX/MTBE/TBA/TBF/ETBE/TAME/DIPE	Groundwater samples were collected from 88 monitoring wells using low-flow purging techniques. Surface water samples collected at 6 locations along Pacheco Creek.
Groundwater Monitoring (Quarterly)	Groundwater and Surface Water Sampling	2004	TPH-P/BTEX/MTBE/TBA/TBF/ETBE/TAME/DIPE	Groundwater samples were collected from 88 monitoring wells using low-flow purging techniques. Surface water samples collected at 6 locations along Pacheco Creek.
Groundwater Monitoring (Quarterly)	Groundwater and Surface Water Sampling	2005	TPH-P/BTEX/MTBE/TBA/TBF/ETBE/TAME/DIPE	Groundwater samples were collected from 94 monitoring wells using low-flow purging techniques. Surface water samples collected at 6 locations along Pacheco Creek.
Groundwater Monitoring (Quarterly)	Groundwater and Surface Water Sampling	2006	TPH-P/BTEX/MTBE/TBA/TBF/ETBE/TAME/DIPE	Groundwater samples were collected from 92 monitoring wells using low-flow purging techniques. Surface water samples collected at 5 locations along Pacheco Creek
Final Human Health Risk Assessment	Risk Assessment	2006	Groundwater: BTEX, MTBE Soil Gas: 1,3-Butadiene, MTBE, BTEX, iso-Propylbenzene, n-Propylbenzene, 1,3,5-TMB, 1,2,4-TMB, sec-Butylbenzene	Presents the results of the risk assessment update conducted to determine health risks to potential future human receptors at PBC Parcels 1A and 1B of the Former UST Site 957/970 caused by the presence of residual fuel hydrocarbons in soil and groundwater remaining after remediation activities at the site.
Groundwater Monitoring (Quarterly)	Groundwater and Surface Water Sampling	2007	BTEX/MTBE/TBA/TBF/Nitrate/Sulfate/iron and dissolved iron	Groundwater samples were collected from 94 monitoring wells using low-flow purging techniques. Surface water sample collected at 1 location along Pacheco Creek.
Groundwater Monitoring (Quarterly)	Groundwater and Surface Water Sampling	2008	BTEX (one well) /MTBE/TBA/TBF/Nitrate/Sulfate/iron and dissolved iron	Groundwater samples were collected from 95 monitoring wells using low-flow purging techniques. Surface water sample collected at 1 location along Pacheco Creek.
Groundwater Monitoring (Quarterly)	Groundwater and Surface Water Sampling	2009	BTEX(one well) /MTBE/TBA/TBF/Nitrate/Sulfate/iron and dissolved iron	Groundwater samples were collected from 107 monitoring wells using low-flow purging techniques. Surface water sample collected at 1 location along Pacheco Creek.
Groundwater Monitoring (Quarterly)	Groundwater and Surface Water Sampling	2010	BTEX(one well) /MTBE/TBA/TBF/Nitrate/Sulfate/iron and dissolved iron	Groundwater samples were collected from 84 monitoring wells using low-flow purging techniques. Surface water sample collected at 1 location along Pacheco Creek.

Table 3. Summary of Investigations and Remediation at Former UST Site 957/970 (Continued)

Investigation/Remediation	Activity	Date	Analysis	Description
Direct Push Investigation	Groundwater Grab Sampling and Soil Core Investigation/Well Abandonment	May 2010	MTBE	Groundwater grab samples collected and soil core logging conducted at 15 locations in the leading edge area to inform final design of air sparge system. 122 former air sparge, SVE, piezometers, and monitoring wells located on former Navy property were abandoned.
Well Abandonment	Abandon Monitoring Wells	May 2010	NA	Biosparge system well removal (67 air sparge and SVE wells, 23 soil gas monitoring points abandoned), and 26 monitoring wells removed from the monitoring well network.
Air Sparge System Installation	Air Sparge System Installation/Performance well Installation (leading edge area Area)	October 2010	NA	An air sparge system (50 sparge wells across 4 zones) was installed and initiated at the Site to mitigate elevated concentrations of MTBE in the leading edge area. Five additional monitoring wells were installed in and around the treatment area to monitor air sparge system performance. After one year of operation and with regulatory approval the air sparge system was shutdown.
Groundwater Monitoring (semiannually)	Groundwater and Surface Water Sampling	2011	BTEX(one well) /MTBE/TBA/TBF/Nitrate/Sulfate/iron and dissolved iron	Groundwater samples were collected from 84 monitoring wells using low-flow purging techniques. Surface water sample collected at 1 location along Pacheco Creek.
Final Human Health Risk Assessment Update For Parcel 1a, Department Of Defense Housing Facility Novato, California	Risk Assessment	2011	Groundwater: BTEX, MTBE Soil Gas: 1,3-Butadiene, MTBE, BTEX, iso-Propylbenzene, n-Propylbenzene, 1,3,5-TMB, 1,2,4-TMB, sec-Butylbenzene	This document presents a human health risk assessment (HHRA) conducted to assess site conditions following all remediation activities completed to date within Parcel 1A at the Department of Defense Housing Facility (DoDHF) in Novato, California
Groundwater Monitoring (semiannually)	Groundwater Sampling	2012	BTEX(one well) /MTBE/TBA/TBF/Nitrate/Sulfate/iron and dissolved iron	Groundwater samples were collected from 48 monitoring wells using low-flow purging methods.
Groundwater Monitoring (semiannually)	Groundwater Sampling	2013	BTEX(one well) /MTBE/TBA/TBF/Nitrate/Sulfate/iron and dissolved iron	Groundwater samples were collected from 49 monitoring wells using low-flow purging methods.
Air Sparge System Removal and Well Abandonment	Air Sparge System Removal and Monitoring Well Abandonment	November 2013	NA	Air sparge system removed from the leading edge area, 50 air sparge wells and 24 monitoring wells removed from monitoring well network.
Groundwater Monitoring (annually)	Groundwater Sampling	November 2014	BTEX(one well) /MTBE/TBA/TBF/Nitrate/Sulfate/iron and dissolved iron	Groundwater samples were collected from 49 monitoring wells using low-flow purging methods. Updated groundwater fate and transport modeling and CSM
Soil Excavation (former UST 970 vicinity)	Remedial Action	July 2015	TPH-G/D/MO/VOCs (BTEX) and MTBE/SVOCs/ PAHs/Total Organic Lead/CAM Metals/PCBs	The remedial action will prepare the Site for a future risk assessment that will be conducted to determine conformity with residential human health standards. When residential standards are met at all depths below ground surface (bgs), the land use covenant between the California Department of Toxic Substances Control (DTSC), the San Francisco Bay Regional Water Quality Board, Department of the Navy (DON) and the property owners, Hamilton Square LLC; as well as the DON deed restriction on the property, may be removed to allow for residential development.
Groundwater Monitoring (annually)	Groundwater Sampling	December 2015	BTEX(one well) /MTBE/TBA/TBF/Nitrate/Sulfate/iron and dissolved iron	Groundwater samples were collected from 44 monitoring wells using low-flow purging methods. Result presented in Site Closure Report (Battelle, in progress)

Table 4. Historical Analytical Parameters for Groundwater and Surface Water Sampling at Former UST Site 957/970

Analyte	Matrix	Year	Sampling Frequency
BTEX, MTBE, TPH (purgeable)	GW	2000-2001	Quarterly

Table 6. TPH-G Concentrations in Groundwater (2006 and 2015) (Continued)

Well ID	Sample Date	TPH-G (µg/L)		Sample Date	TPH-G (µg/L)	
Groundwater ESL		**443**			**443**	
NA-4 [a]	11/7/2006	73	Z	Abandoned		
NA-6[a]	11/7/2006	130	Z	-	-	-
NA-7	11/7/2006	4200	Y	12/10/2015	4400	-
PZ-10	11/15/2006	13	U	-	-	-
Maximum		**4200**	**Y**	**-**	**4400**	**-**

concentration exceeds current ESLs
- not sampled
[a] no longer in monitoring well network
NA- Not analyzed
J - estimated value
U - nondetect
Y - the chromatographic fingerprint of the sample resembles a petroleum product elution in approximately the correct carbon range, but the elutiopattern does not match the calibration standard.
Z - the chromatographic fingerprint does not resemble a petroleum product.
[1] 2016 Tier 1 ESLs aquatic habitat goal used because no ESL is provided for vapor intrusion of TPH-G

ND = all compounds not detected.
U = concentrations not detected at or above the detection limit shown.
(a) (<85) = Maximum detection limit for sweep of analytes. Laboratory noted that while the results were within the quantitation range; the chromatographic pattern was not typical of fuel.
(b) U.S. EPA Method 8260B analysis performed for VOCs.

Section 1.0: INTRODUCTION

This Annual Site Status Report (SSR) describes activities performed at Former Underground Storage Tank (UST) Site 957/970 at the Department of Defense Housing Facility (DoDHF) Novato in Novato, California for the Naval Facilities Engineering Command Southwest under Contract No N62583-11-D-0515, Task Order 72. This report presents the results of the annual groundwater monitoring activities conducted in November 2014.

The November 2014 sampling event was the fourth conducted in accordance with the revised schedule presented in the *Final Groundwater Monitoring Plan for Former UST Site 957/970 at Department of Defense Housing Facility, Novato, California* (Battelle, 2013a), which received concurrence from the regulatory agencies following a comment resolution process. The 2014 sampling event was conducted in the fifteenth year of regular groundwater monitoring conducted at UST Site 957/970, which began in 1998.

In addition, this Annual SSR addresses the data quality objectives (DQOs) presented in the Draft Sampling and Analysis Plan (SAP) (Battelle, 2014a). Overall, this Annual SSR: 1) presents the results from the annual groundwater monitoring activities conducted in November 2014; and 2) evaluates monitored natural attenuation (MNA) throughout the methyl tert-butyl ether (MTBE) plume. This report also summarizes results from annual soil gas monitoring associated with the former Building 965 Area.

1.1 Site Location

Former UST Site 957/970 at DoDHF Novato is located approximately 20 miles north of San Francisco, in Marin County, California. A site location map depicting former UST Site 957/970 and the surrounding vicinity is provided in Figure 1. The site comprises an approximate 13 acre area with dimensions of approximately 1,100 ft by 500 ft bounded on the south by Main Entrance Road and on the north by railroad tracks operated by the Golden Gate Bridge, Highway, and Transportation District. Pacheco Creek is the nearest surface water body, located approximately 800 ft northwest of Former UST Site 957/970 (see Figures 1 and 2). Although the Navy continues to monitor contamination associated with former facilities, all parcels associated with Naval Exchange (NEX) gas station and Public Works Center (PWC) gas station activities have been deemed suitable for deed transfer and are currently owned by non-Navy parties. Most historical structures have been removed as part of redevelopment of the property.

1.2 Site History and Tank Removal

The site is the location of a former NEX gas station and a former PWC gas station (see Figure 2). The NEX gas station was located at the northwest corner of Main Entrance Road and C Street, where Building 970 and associated pump islands were in operation from the mid-1970s through the early 1990s. The NEX gas station was closed in the early 1990s and, subsequently, the three USTs supporting the station (970-1 [10,000-gallon UST], 970-2 [10,000-gallon UST], and 970-3 [10,000-gallon UST], collectively referred to as UST 970) were excavated and removed from the site. The PWC gas station was located approximately 700 ft north of the NEX gas station and was the site of UST 957 (12,000-gallon UST), which was removed along with its associated underground piping in 1992.

1.3 Previous Site Investigations and Activities

In 1992, groundwater and soil samples were collected from excavations during the tank removal activities in the areas of former USTs 957 and 970. Analytical results from these samples indicated that gasoline was released to the environment from the USTs. Since the initial release, concentrations of gasoline constituents, such as benzene, toluene, ethylbenzene, and total xylenes (BTEX), have been significantly reduced as a result of active treatment on Navy property as well as attenuation mechanisms, leaving MTBE as the only chemical of concern (COC) remaining in groundwater. Because the MTBE groundwater plumes underlying these two areas have merged and are no longer distinguishable, the individual site designations have been combined and relabeled as "Former UST Site 957/970."

Although the California State Water Resources Control Board (Water Board) has not formally acknowledged that groundwater at the site meets Resolution 88-63 criteria for a municipal beneficial use exemption (Water Board, 1988), impacted groundwater beneath the site is arguably not a potential drinking water source because the water in the shallow aquifer underneath and downgradient of the site has a high total dissolved solids concentration and low yield. No domestic, irrigation, or agricultural wells are currently impacted by the dissolved-phase gasoline constituents released from the site.

Starting in June 1998, an interim remedial action consisting of air sparging and soil vapor extraction (SVE) was implemented to reduce gasoline constituent mass in areas where the highest petroleum hydrocarbon concentrations were detected in groundwater. Significant mass removal was achieved by the air sparging and SVE systems and, subsequently, the systems were shut down in early October 1999 because of greatly diminished mass removal rates.

In September 2002, a biosparging treatment system was initiated at the site to mitigate elevated groundwater concentrations of MTBE on former Navy property. This active treatment system was temporarily shut down for one year (from March 2005 to March 2006) with approval from the Water Board because asymptotic mass removal was achieved by the system. No significant rebound of MTBE concentrations was observed during this interim shut-down phase. The system was restarted in March 2006 and operated on a pulsed schedule until system shutdown and initiation of the one-year rebound monitoring period began on January 30, 2009 (with conditional Water Board approval). During the one-year rebound monitoring period, no significant MTBE rebound was measured in any of the performance monitoring wells. As a result, the Navy requested permanent shutdown and removal of the biosparging treatment system in a letter dated January 22, 2010, which was subsequently approved by the Water Board on April 15, 2010.

In 2008, a non-time critical removal action (NTCRA) consisting of subsurface soil removal in and around the Building 965 Area at Parcel 1A was conducted to address areas of residual contamination from the suspected wash pad area surrounding Building 965. This NTCRA was conducted specifically to address areas that potentially posed a significant risk via a hypothetical indoor air pathway and remove soil that could serve as a continuing source of contamination to soil gas. The COCs that have been identified at the Building 965 Area through past site investigations are benzene, 1,3-butadiene, cis-1,2-dichloroethene (DCE), ethylbenzene, trichloroethene (TCE), and vinyl chloride. Following the NTCRA soil removal activities, 22 soil gas sampling points were installed at 11 locations and subsequent post-excavation soil gas sampling was instated to monitor COCs in the area. The removal action objective (RAO) for soil gas at the site was to reduce and/or manage human health risk to acceptable levels (ERRG, 2011).

In November 2009, the Final Action Memorandum (Battelle, 2009a) for the Building 965 Area stipulated that the results of a risk assessment would be evaluated to determine whether additional contingency risk management actions were necessary to support property transfer to the Novato Unified School District (NUSD) for future school use. The potential risk management alternatives presented in the Action Memorandum included contingency SVE or institutional controls (ICs) to manage residual risk in the Building 965 Area. Following the Building 965 NTCRA activities and final reporting, the Final *Revised Risk Assessment for Former Underground Storage Tank Site 957/970 at the Department of Defense Housing Facility, Novato, California* (Battelle and ERRG, 2010) was developed. The purpose of the risk assessment was to provide a cumulative, comprehensive evaluation of residual risks at Parcel 1A, including the Building 965 Area.

The *Final Revised Risk Assessment for Former Underground Storage Tank Site 957/970 at the Department of Defense Housing Facility, Novato, California* (Battelle and ERRG, 2011) recommended the use of ICs to restrict land use for property transfer to NUSD based on the low magnitude of risks remaining at Parcel 1A. A land use control in the form of a Covenant to Restrict the Use of Property was implemented around the Building 965 Area to prevent indoor air exposure and access to groundwater and soil in the area. Details regarding the land use control restrictions in the Covenant to Restrict the Use of Property can be found on record with the County of Marin. Restrictions to subsurface soil and groundwater are summarized below:

Groundwater Management:

- prohibiting activities involving interaction with the groundwater beneath the Site

Soil Management:

- digging restrictions, prohibiting disturbance of the soil unless it is removed and disposed of following all applicable laws and regulations
- prohibiting residential building on the Site
- ongoing monitoring of contaminated media.

On December 10, 2008, the Navy presented plans to the Base Realignment and Closure (BRAC) Cleanup Team (BCT) for managing unstable to increasing MTBE groundwater concentrations at the leading edge area of the plume. Afterwards, the Navy submitted the draft addendum to the *Final Corrective Action Plan for Groundwater for Former UST Site 957/970* (Battelle, 2002) to the Water Board for review on December 23, 2008. Based on these plans, the Water Board granted conditional shutdown of the biosparging system on January 16, 2009.

On May 5, 2009, the *Final Corrective Action Plan Addendum, Former UST Site 957/970 at the Former Department of Defense Housing Facility, Novato, California* (Battelle, 2009b) was issued for the site. The Corrective Action Plan (CAP) Addendum describes the current site conditions and recommends a remedial action strategy for the leading edge area of the MTBE plume that would ensure protection of human health and the environment in compliance with Water Board Order No. 00-64, Task 6. After evaluating several remedial technology alternatives, the Navy concluded that air sparging and MNA with a phytoremediation contingency would achieve stable to decreasing MTBE concentrations at the leading edge area of the plume in the most effective and efficient manner to move towards site closure.

On November 24, 2009, the *Draft Leading Edge Area Corrective Action Work Plan, Former UST Site 957/970 at the Former Department of Defense Housing Facility, Novato, California* (Battelle, 2009c) was submitted to the regulatory agencies (i.e., Water Board and California Department of Toxic Substances Control [DTSC]) for review. After addressing all regulatory comments, the *Final Leading Edge Area Corrective Action Work Plan, Former UST Site 957/970 at the Former Department of Defense*

Housing Facility, Novato, California (Battelle, 2010a) was submitted to all project stakeholders on April 26, 2010. After reviewing the results from the preliminary grab sampling event conducted in May 2010, the air sparge system layout and performance goal monitoring wells were finalized with approval from the regulatory agencies and are presented in the *Final Leading Edge Area Corrective Action Work Plan Addendum* (Battelle, 2010a).

As outlined in the *Final Leading Edge Area Corrective Action Work Plan, Former UST Site 957/970 at the Former Department of Defense Housing Facility, Novato, California* (Battelle, 2010a) and its associated Accident Prevention Plan (APP) (Battelle, 2010b), installation, shakedown, and startup of the air sparge treatment system and installation of five additional groundwater monitoring wells to support system performance monitoring were conducted from October through December 2010. The *Annual Site Status Report for the Year 2010, UST Site 957/970, Former Department of Defense Housing Facility, Novato, California* (Battelle, 2011) provides a detailed description of the field implementation of the corrective action activities. Ultimately, the air sparge treatment system began operation in the leading edge area of the MTBE plume on December 17, 2010, and with regulatory approval, the system was shut down on December 16, 2011 after one year of operation. Rebound monitoring was conducted in this area in 2012 and 2013; based on the successful results, the air sparging system was removed in November 2013. Planned work is described in *Letter Work Plan Well Removal Activities, Former Underground Storage Tank Site 957/970* (Battelle, 2013c) and system removal is described in *Final Annual Site Status Report for the Year 2013, Former UST Site 957/970* (Battelle, 2014b). Activities included the physical removal of air sparge wells by removing the casing, over-drilling and abandoning the boreholes in accordance with Marin Environmental Health Services guidelines. In addition, the infrastructure supporting the system (e.g., air compressors, piping, conduits, fencing, power lines, equipment shed) were also removed at this time.

In November and December 2013, 24 monitoring wells previously removed from the monitoring program were physically destroyed. Planned work is described in *Letter Work Plan Well Removal Activities, Former Underground Storage Tank Site 957/970* (Battelle, 2013c) and well removal is described in the *Final Annual Site Status Report for the Year 2013, Former UST Site 957/970* (Battelle, 2014b). Monitoring well casings were removed and the boreholes were over drilled and abandoned according to Marin Environmental Health Services guidelines. Construction debris and soil cuttings related to monitoring well abandonment were properly stored onsite in plastic lined 20 cubic yard (cy) roll-off bins, characterized, and disposed of offsite.

Overall, chemicals detected in soil gas and groundwater at the site have led to various deed restrictions being put onto various parcels of land. They include general restrictions such as groundwater use and non-interference with wells, along with specific restrictions. An isolated portion of Parcel 1A contains restrictions for residential use due to vinyl chloride in soil gas, and digging restrictions throughout the parcel due to petroleum-related constituents. There is a digging restriction that exists at 5 feet below ground surface (bgs) in residential areas overlying the MTBE plume due to potential direct contact between construction workers and groundwater. All restrictions are monitored by the DTSC and Water Board and may be lifted pending the agency's evaluation of current site conditions. Details regarding restrictions can be found in Covenant to Restrict the Use of Property found on record with the County of Marin.

1.4 Summary of 2014 Field Activities

1.4.1 Groundwater Monitoring Activities. Field activities included sampling of the 49 monitoring wells outlined in the Draft SAP (Battelle, 2014a). In total, 62 samples were taken (49 groundwater samples from 49 monitoring wells, five duplicates, four field blanks and four equipment rinsates). As recommended in the 2013 Annual SSR (Battelle, 2014b), beginning in 2014, semi-annual

sampling transitioned to annual sampling and MNA is the sole remedial approach at the site. Thus, this November annual groundwater sampling event was the only groundwater monitoring event at the site in 2014. Groundwater sampling and analytical results are presented further in Sections 2.0 and 3.0.

1.4.2 Soil Gas Sampling Activities. In addition to groundwater monitoring, the eighth round of post-excavation soil gas monitoring in the Building 965 Area was also conducted in November 2014. Since 2009, post-excavation soil gas samples have been collected from 22 sampling points at 11 locations (at multiple depth intervals; depth in feet included in parenthesis at the end of the sample identification name) to monitor COCs in soil in the area. In 2014, 24 samples were collected (21 samples from 11 locations and three field duplicates). Samples were analyzed for site COCs: vinyl chloride, cis-1,2-DCE, TCE, benzene, ethylbenzene, and 1,3-butadiene. In addition, helium was analyzed as the leak detection tracer compound. Details of soil gas sampling results are presented further in Section 2.2.

1.5 Summary of Future Activities

As part of ongoing work associated with the future development of the Hamilton Square Parcel (Figure 2), a draft Remedial Action Work Plan (RAWP) is in the process of being finalized (West Yost Associates, 2015) which outlines a remedial action approach to improve site subsurface soil and groundwater conditions to meet residential human health standards in preparation for residential redevelopment. The removal action will include the demolition and removal of the site buildings and the abandonment of obsolete and unrepresentative groundwater monitoring wells. The RAWP includes a Well Destruction Plan approved by the DTSC, Water Board, and the Navy. The Well Destruction Plan included 20 wells (groundwater monitoring, sparge, and soil vapor extraction wells) scheduled to be abandoned in April 2015. Included in the Well Destruction Plan is the destruction and replacement of two Navy monitoring wells in the current MTBE groundwater monitoring well network (i.e., centerline monitoring wells MW-1A and MW-4A).

Section 2.0: MONITORING PROGRAM

This section summarizes the results from the water-level measurements, groundwater and soil gas chemistry data collected in November 2014. Site-wide water-level measurements were collected on November 10, 2014. A total of 49 monitoring wells and 21 soil gas probes were sampled on November 11 through 18, 2014. Field measurements, groundwater, and soil gas samples collected and analyzed during the November 2014 event were done so in accordance with the *Draft Sampling Analysis Plan for Former UST Site 957/970 at Department of Defense Housing Facility, Novato, California* (Battelle, 2014a) and the updated Draft Health and Safety Plan (Battelle, 2012).

2.1 Groundwater Monitoring Program

Each monitoring well was inspected during water-level measurements and groundwater monitoring activities and secured upon sample completion according to the protective measures described in the Monitoring Well Protection Plan (Battelle, 2000). All monitoring well observations including condition and any odors from the November 2014 sampling event are documented on the well purge and maintenance log sheets provided in Appendix A.

2.1.1 Water-Level Measurements. Prior to any purging and sampling activities, a water-level measurement was collected from each monitoring well across the site and recorded in accordance with the Final Groundwater Monitoring Plan (Battelle, 2013a). From the water-level measurements, a potentiometric surface map was created for November 2014 (Figure 3). In addition, groundwater elevations at each monitoring well have been included on the potentiometric map to illustrate the accuracy of the interpolated groundwater surface. Overall, the potentiometric surface map for November 2014, including groundwater flow direction and hydraulic gradient, is consistent with all historical potentiometric maps for the site, demonstrating that groundwater flow is toward the north and northeast across Landfill 26 with a decreasing hydraulic gradient. All historical water-level measurements collected at each monitoring well are included as Appendix B.

In November 2014, water-level measurements were collected from several wells located in and around Landfill 26 (i.e., IT-MW-78, MW-86S, IT-MW-L26-1, and IT-MW-92-43) to determine the groundwater flow patterns in Landfill 26 and the leading edge area of the MTBE plume (Figure 3). These monitoring wells are screened within a deeper portion of the aquifer. The resulting potentiometric surface indicates that the hydraulic gradient in Landfill 26 and the leading edge area of the MTBE plume is relatively low as the groundwater flows toward the northeast. IT-MW-81D and MW-86D were not used in developing the potentiometric map as they are screened deeper (~22 ft bgs to 38 ft bgs) The observed hydraulic conditions are consistent with previous observations and indicate that the MTBE plume may be controlled, and MTBE concentrations at the leading edge of the plume may be stabilized and/or decrease more effectively than upgradient portions of the plume due to the relatively slower groundwater flowrate, thus confirming previous interpretations presented in updates to the conceptual site model (CSM) (Battelle, 2014b).

2.1.2 Groundwater Sample Collection. For the groundwater monitoring activities, low-flow purging and sampling were conducted at all monitoring wells based on the methodology provided in *Groundwater Sampling Guidelines for Superfund and Resource Conservation and Recovery Act (RCRA) Project Managers* (United States Environmental Protection Agency [U.S. EPA], 2002) and the American Society for Testing and Materials (ASTM) Standard D 6771-02 (ASTM, 2002). During low-flow purging, pH, conductivity, dissolved oxygen (DO), temperature, oxidation reduction potential (ORP), and turbidity were measured at each monitoring well every 3 to 5 minutes and recorded on the purge logs (Appendix A). Once the stabilization criterion for each parameter was achieved (see Appendix A), a

sample was collected. The final set of water quality parameter measurements collected after parameter stabilization and immediately prior to sample collection during the November 2014 sampling event and historical sampling events are provided in Appendix C.

The Draft SAP (Battelle, 2014a) provides several tables related to sample collection and analysis: standard operating procedures (SOPs) for low-flow sampling, SOPs for decontamination of reusable equipment, quality control (QC) sampling requirements, SOPs for containers, sample storage and hold times, descriptions of required analytical methods and data reporting, and tables outlining data verification and validation. As part of each annual SSR, the Navy has provided recommendations that have been adopted to optimize the monitoring program at former UST Site 957/970. While the current monitoring program is generally based on the *Final Updated Groundwater Monitoring Plan* (Battelle, 2013a), the number of monitoring wells and analyses conducted through November 2014 account for modifications to the program that have been implemented based on these annual optimization recommendations in the *Annual Site Status Report for the Year 2012, UST Site 957/970, Former Department of Defense Housing Facility Novato, California* (Battelle, 2013b). A summary of the number of monitoring wells and analyses for the November 2014 sampling event are as follows:

- MTBE was analyzed in all monitoring wells (total of 49 wells).
- MTBE degradation products, tert-butyl alcohol (TBA) and tert-butyl formate (TBF), were analyzed in 26 monitoring wells.
- Nitrate, sulfate, and dissolved iron were analyzed in 18 monitoring wells.

The laboratory analytical reports for the November 2014 sampling event, including chain-of-custody documentation and quality assurance (QA)/QC summary reports, are provided in Appendix D. All groundwater analytical results collected at former UST Site 957/970 through November 2014 are provided in Microsoft® Excel format (see Appendix E). In addition, all groundwater analytical results from 2014 have been uploaded to GeoTracker, the Water Board's database. The GeoTracker upload confirmation sheets for 2014 are provided in Appendix F.

QC samples were collected in the field to ensure that meaningful and representative data sets were generated during the sampling event. In general, results from duplicate samples were consistent with the primary sample and MTBE was not detected in any of the QC samples (i.e., field blanks, equipment rinsate blanks) collected during the November 2014 sampling event (see Appendix E). These results indicate that no cross-contamination occurred during sampling activities, and that laboratory detections are indicative of actual groundwater conditions at the site. The frequency of QC samples collected during the November 2014 sampling event is as follows:

- Field Duplicates: 5
- Field Blanks: 4
- Equipment Rinsate Blanks: 4

Due to an oversight, trip blanks were not shipped with the samples during the 2014 sampling event. Historically, trip blanks have been analyzed for volatile organic compounds (VOCs) during groundwater monitoring events and have not yielded any detections of VOCs. The likelihood that VOC contamination occurred during sample transport is considered minimal. Trip blanks will be included in all future groundwater sampling events.

Groundwater:

Analytical data collected at the site were verified by the Battelle Project QC Manager and validated by an independent contractor, Laboratory Data Consultants, Inc. The independent data validation reports are provided in Appendix G. Data validation involved ensuring that the holding times were met and samples were analyzed according to the frequency and methodology specified in the Draft SAP (Battelle, 2014a). In general, results of the data validation indicated that sample analyses were conducted according to the frequency and methodology specified in the SAP (Battelle, 2013a). There were a few exceptions to the analytical criteria noted in the laboratory data validation reports and summarized below:

- The laboratory performed a one point calibration for TBF for all groundwater samples. The method requires a five-point calibration.
- The initial and/or continuing calibration relative response factors for TBA were below the acceptance criteria for all groundwater samples
- The initial and continuing calibration percent difference for TBA was above the acceptance criteria for all groundwater samples

Exceptions to the analytical criteria resulted in the assignment of "J" flags to the results, unless otherwise noted. The "J" flag indicates that the result should be considered an estimated value. Although there were some exceptions to the analytical criteria, all data were considered acceptable for the intended use of characterizing groundwater quality, and no data were rejected during the data validation process.

Soil gas:

Analytical data collected at the site were verified by the Battelle Project QC Manager and validated by an independent contractor, Laboratory Data Consultants, Inc. The independent data validation reports are provided in Appendix G. Data validation involved ensuring that the holding times were met and samples were analyzed according to the frequency and methodology specified in the Draft SAP (Battelle, 2014a). In general, results of the data validation indicated that sample analyses were conducted according to the frequency and methodology specified in the SAP (Battelle, 2013a). There were a few exceptions to the analytical criteria noted in the laboratory data validation reports and summarized below:

- One method blank and two laboratory blanks analyzed with the samples had detections of benzene, ethylbenzene and TCE near the reporting limits. The blank results were compared to the results for the associated samples to determine if sample results were greater than five times the blank result. Sample results that were less than five times the blank result were considered non-detects.

Exceptions to the analytical criteria resulted in the assignment of "U" flags to the results, indicating that the result should be considered a non-detect. Although there were some exceptions to the analytical criteria, all data were considered acceptable for the intended use of characterizing groundwater quality, and no data were rejected during the data validation process.

Based on the first two quarters in which low-flow purging and sampling were implemented at the site (i.e., February and May/June 2007), most monitoring wells were amenable for sampling using the low-flow technique. However, due to varying aquifer conditions encountered during the sampling event and technical difficulties, several monitoring wells were not able to be sampled using low-flow purging according to the SAP attached to the Final Groundwater Monitoring Plan (Battelle, 2013a). All technical

difficulties encountered in the field were corrected as efficiently as possible and all deviations from the low-flow sampling protocol are described below.

November 2014 Sampling Event:

- The following monitoring wells demonstrated significant drawdown (i.e., >0.3 feet) with no observed stabilization of water levels. Groundwater samples were not collected during purging; however, samples and water quality parameters were collected from these wells after more than two hours but generally less than 24 hours of recharging: MW-M12 (exception: water level rebounded 0.41 feet after 40 minutes, and sample was collected), NA-0, NA-4, and NA-7 (exception: sample collected after 24 hours and 4 minutes).
- Drawdown greater than 0.3 feet occurred at MW-M15. Water quality parameters were not collected due to insufficient water. Samples were subsequently collected from this well after more than two hours but less than 24 hours of recharging.

The sampling technique employed at each monitoring well included in the Sampling Locations and Methods/SOP Requirements Table of the SAP attached to the *Final Groundwater Monitoring Plan* (Battelle, 2013a) has been documented since the February 2007 sampling event, when low-flow purging and sampling were initiated at the site. This historical documentation will continue to be used during future sampling events to determine the most appropriate and consistent sampling technique for each monitoring well. However, it should be noted that, in some instances, consistent sampling techniques may not be feasible due to changing environmental conditions but, in every instance, low-flow purging and sampling will first be attempted at the monitoring well.

2.2 Soil Gas Sampling

2.2.1 Soil Gas Sample Collection. Since 2009, post-excavation soil gas samples have been collected from 22 sampling points at 11 locations (at multiple depths intervals; depth in feet included in parenthesis at the end of the sample identification name) to monitor COCs in soils in the area (Figure 4). The eighth round of post-excavation soil gas monitoring in the Building 965 Area was conducted in November 2014. In total, 24 samples were collected (21 samples from 11 locations and three field duplicates). Samples were analyzed for site COCs: vinyl chloride, cis-1,2-DCE, TCE, benzene, ethylbenzene, and 1,3-butadiene.

Soil gas sampling procedures were conducted in accordance with the Draft Battelle SAP (2014a). Helium was analyzed as the leak detection tracer compound, and field duplicates were collected from CSG-1A-9(6.5), CSG-1A-7(3.5), and CSG-1A-10(6.5) simultaneously with the original samples from a single manifold. A soil gas sample at CSG-1A-3(6.5) was not collected due to the presence of water in the tubing during purge. Helium results indicated that small leaks may have been present during the sampling of CSG-1A8(7.25) (helium at 1.1%/1.1%) and CSG-1A8(3.75) (helium at 0.096 J%), however, because the helium tracer compound did not exceed the maximum criteria of 5% (California Environmental Protection Agency [CalEPA], 2012a), the data were determined to be acceptable. The data from the remaining locations were also acceptable. No sampling and analytical data discrepancies were identified during the eighth round of post-excavation soil gas monitoring conducted in November 2014. The field logs for soil gas sampling are provided in Appendix A.

As stated in the Building 965 Area NTCRA (ERRG, 2011), the removal action objective for soil gas at the site is to reduce and/or manage human health risk to acceptable levels. Risk based screening levels (RBSLs) published in 2008 have been used at the site to compare against the soil gas

analytical results. As improvements have been made to the Johnston and Ettinger (J&E) model since the RBSLs were published in 2008 and because toxicity values for some of the soil gas chemicals of potential concern (COPCs) were revised, updated soil gas RBSLs were provided in the Draft Sampling and Analysis Plan (Battelle, 2014a) using the current DTSC J&E model (version 3.0; last modified March 2014). Figure 5 presents the post-excavation COC concentrations (that have historically exceeded RBSLs) over time compared to RBSLs from 2009 to 2014 and Table 1 provides a table summarizing the site COCs analyzed for and detected in soil gas samples collected from 2009 to 2014. The following summary presents a comparison of the soil gas RBSLs based on the 2014 analytical results for each COC associated with soil gas sampling at the Building 965 Area:

- ***Benzene:*** RBSLs reached at all shallow soil gas sampling locations; remain below RBSLs at all deep soil gas sampling locations
- ***1,3-butadiene:*** remain below RBSLs at all soil gas sampling locations
- ***Cis-1,2- DCE:*** remain below RBSLs at all soil gas sampling locations
- ***Ethylbenzene:*** remain below RBSLs at all soil gas sampling locations
- ***TCE:*** remain below RBSLs at all soil gas sampling locations
- ***Vinyl chloride***: RBSL exceeded at two locations (three depths): CSG-1A6 (2.9) [84 µg/m^3] and CSG-1A6 (6.0) [50 µg/m^3] and CSG-1A7 (3.5) [25 µg/m^3].

Vinyl chloride is the only COC in soil gas that remains above RBSLs in the Building 965 Area (Figure 5 and Table 1). At soil gas sampling location CSG-1A6 (2.9), vinyl chloride has steadily decreased from 220 µg/m^3 to 48 µg/m^3 from 2009 to 2013, respectively. However, in 2014, the vinyl chloride concentration increased to 86 µg/m^3 at this location. At soil gas sampling location CSG-1A6 (6.0), vinyl chloride is near historical lows at 50 µg/m^3 (the lowest soil gas sampling result was in 2011 at 45 µg/m^3). Soil gas sampling results for vinyl chloride at location CSG-1A7 (3.5) are at their lowest concentration since 2009 (270 µg/m^3) at 25 µg/m^3. These two sampling locations are within close proximity to each other (i.e., 20 ft apart), located just north-northeast of former Building 965 (see Figure 4).

Section 3.0: EVALUATION OF MNA THROUGHOUT MTBE PLUME

MNA is a passive remedial approach that relies on naturally-occurring processes, such as biodegradation, dispersion, dilution, sorption, volatilization, and/or chemical and biochemical stabilization, to reduce contaminant concentrations in groundwater. Due to the complexity of environmental systems, it is not technically feasible to quantify the individual contribution of each mechanism to attenuation (U.S. EPA, 2005); however, MNA as a whole can be quantified through analysis of indicators such as plume stability, contaminant mass changes, and geochemical indicators of biodegradation. This section addresses specific DQOs included in the Final Groundwater Monitoring Plan (Battelle, 2013a) to evaluate the occurrence of MNA throughout the MTBE plume.

3.1 MTBE Plume Status

The MTBE plume at the site is split into the northern plume and smaller southern plume. To evaluate these plumes, the monitoring well network includes both leading edge area wells (near Landfill 26) and upgradient wells. The leading edge area wells include 23 monitoring wells in the most northern extent of the plume at the site: LEA-MW1, LEA-MW2, LEA-MW3, LEA-MW4, LEA-MW5, IT-GMP-15, IT-GMP-17, IT-GMP-18, IT-GMP-19, IT-MW-81D, IT-MW-92-38, IT-PZ-7, IT-PZ-9, MW-86D, MW-86S, MW-MW12, MW-M13, MW-M13D, MW-M14D, MW-M14S, MW-M27D, MW-M27S, and MW-M28.

The upgradient wells include 26 monitoring wells in the southern portion of the northern plume and in the smaller southern plume: 957-MW4, 970-MW1, 970-MW2, 970-MW3, 970-MW4, 970-MW5, IT-1MW-4A, MW-10A, MW-1A, MW-4A, MW-M15, MW-M18, MW-M20D, MW-M21, MW-M23, MW-M24, MW-M8, MW-M9, NA-0, NA-4, NA-7, PG-MW1, PG-MW5, MW-3D, MW-M2-BR, and MW-M8-BR.

Figure 6 presents an MTBE contour map generated from the groundwater data collected during the November 2014 sampling event as well as the November 2012 and 2013 sampling events. The contour map generated from the 2014 MTBE data differs from the 2013 MTBE contour map in two distinct areas (i.e., near the Newport housing development and within the leading edge area), although it is consistent with the contour map generated from the 2012 MTBE data. Specifically, the data from the 2014 sampling event indicate a continuous extent of MTBE contamination ranging from 13 to 100 μg/L beginning near the Newport housing development and extending further upgradient in the leading edge area. In 2013, the data indicated that these were two distinct areas of contamination. The 2014 MTBE data indicate that concentrations exceeding 100 μg/L in the leading edge area cover a continuous area similar to the 2012 MTBE data. An important consistency between the 2014, 2013, and 2012 MTBE contour maps is that the "front of plume stability" continues to remain valid (represented by the orange line in Figure 6). Based on the 2012, 2013, and 2014 MTBE data, MTBE concentrations have not exceeded the California maximum contaminant level (MCL) within monitoring wells located downgradient from this front. The "front of plume stability" is one of the key features in the groundwater flow and contaminant transport model developed to predict the fate and transport of the MTBE plume (Battelle, 2014b).

A total of 22 monitoring wells (out of 49 monitoring wells) demonstrated an increase in MTBE concentrations during the November 2014 sampling event compared to the November 2013 sampling event, but were relatively stable when compared to the November 2012 sampling event. The majority of the monitoring wells that demonstrated an increase in MTBE concentration were primarily located in the leading edge area. Time-series plots of MTBE concentrations at all monitoring wells sampled during the November 2014 event are shown in Figure 7.

Since November 2012, the portion of the MTBE plume on former Navy property (i.e., south of the railroad tracks) can be described as one smaller distinct plume (i.e., centered around MW-4A) and then one larger plume extending downgradient off former Navy property into the leading edge area. Centerline wells NA-4 and NA-7 (non-detect and 0.93 µg/L, respectively) separate the two plumes in the vicinity of former Building 971 to the north and Building 970 to the south. More importantly, a total of 27 monitoring wells (out of 49 monitoring wells) sampled during the 2014 event demonstrated MTBE concentrations below the California MCL. The maximum MTBE concentration was 410 µg/L in monitoring well LEA-MW5 located within the leading edge area. Table 2 provides analytical results for MTBE, TBA, TBF, sulfate, nitrate, and ferrous iron from the November 2014 sampling event.

3.2 Plume Stabilization

The operation of multiple active treatment systems in the Former UST Site 957/970 source area and an air sparge treatment system in the leading edge area have, in general, led to stable to decreasing MTBE concentrations in groundwater throughout the MTBE plume. Plume stability is determined by observing trends in individual monitoring wells and by comparing the leading edge area to the upgradient area of the MTBE plume.

Trends are determined through parametric regression analysis, outlined in U.S. EPA (2005), of time-series MTBE data at each monitoring well to determine areas of the plume where MTBE concentrations are unstable, increasing, stable, or decreasing. A detailed review of site-wide statistics is provided in Appendix H.

Based on the results of the statistical analysis, each well is grouped into one of four categories, as follows:

- **Statistically Significant Decreasing Trend** – This designation indicates that MTBE concentrations are decreasing over time and that these trends are statistically significant based on a comparison to historical concentration trends. MTBE concentrations in these monitoring wells can be expected to decrease over time.
- **Statistically Insignificant Decreasing Trend** – This designation indicates that MTBE concentrations are decreasing over time, however the decreasing trend is not statistically significant based on a comparison to historical concentration trends. If consistent decreases in MTBE concentrations continue to be observed, it is possible for this trend to change to a statistically significant decreasing trend. At that time, MTBE concentrations in these monitoring wells can be expected to continue to decrease over time.
- **Statistically Insignificant Increasing Trend** – This designation indicates that MTBE concentrations are increasing over time, however the increasing trend is not statistically significant based on a comparison to historical concentration trends.
- **Statistically Significant Increasing Trend** – This designation indicates that MTBE concentrations are increasing over time and that these trends are statistically significant based on a comparison to historical concentration trends. MTBE concentrations in these monitoring wells can be expected to increase over time.

The Navy has continually evaluated statistical trends throughout the MTBE plume. The results of these evaluations have indicated that MTBE concentrations in monitoring wells located in the upgradient area of the plume (i.e., outside of the leading edge area) have largely demonstrated statistically significant decreasing trends. However, due to the northern migration of the residual MTBE mass, concentrations in some monitoring wells located in the leading edge area of the plume have demonstrated

unstable to statistically significant increasing trends. Figure 8 presents the results from the statistical analysis evaluating concentration trends throughout the MTBE plume. Overall, the results of the November 2014 statistical evaluation are similar to previous evaluations and indicate that there is a distinct difference in MTBE concentration trends in the leading edge area compared to the upgradient area.

Leading Edge Area – Increasing MTBE concentration trends are more prevalent in the leading edge area as compared to the upgradient area of the plume. In November 2014, MTBE concentration trends were examined at 23 monitoring wells (LEA-MW1, LEA-MW2, LEA-MW3, LEA-MW4, LEA-MW5, IT-GMP-15, IT-GMP-17, IT-GMP-18, IT-GMP-19, IT-MW-81D, IT-MW-92-38, IT-PZ-7, IT-PZ-9, MW-86D, MW-86S, MW-MW12, MW-M13, MW-M13D, MW-M14D, MW-M14S, MW-M27D, MW-M27S, MW-M28) within the leading edge area (Figure 8). MTBE concentrations exceeded the State of California MCL in 12 of the 23 monitoring wells evaluated in the leading edge area. This is an increase from November 2013 where six monitoring wells in the leading edge area exceeded the MCL; however, the result is more consistent with the 10 monitoring wells exceeding the MCL in November 2012. Below are the statistical analysis results for the leading edge area:

- Twelve monitoring wells (52%) demonstrated statistically significant decreasing trends or non-detect concentrations (three exceeded the MCL: IT-MW-92-38, LEA-MW1, LEA-MW5);
- One monitoring well demonstrated a statistically insignificant decreasing trend (exceeded MCL: LEA-MW4);
- Three monitoring wells (13%) demonstrated a statistically insignificant increasing trend (all of them exceeded the MCL: MW-M13D, LEA-MW2, LEA-MW3); all three wells exhibited an increasing concentration from the November 2013 sampling event; however, it is important to note that the increases in concentrations are statistically insignificant.
- Seven monitoring wells (30%) demonstrated a statistically significant increasing trend (five exceeded the MCL: IT-GMP-15, IT-GMP-17, IT-GMP-18, IT-PZ-9, MW-M13). These results match the results observed in November 2013. While the concentrations appear to have increased, the results for many of the monitoring wells exhibiting statistically significant increases are generally consistent with levels observed in 2012.

Upgradient Area – In November 2014, the MTBE concentration trend was examined at 23 monitoring wells (957-MW4, 970-MW1, 970-MW2, 970-MW3, 970-MW4, 970-MW5, IT-1MW-4A, MW-10A, MW-1A, MW-4A, MW-M15, MW-M18, MW-M20D, MW-M21, MW-M23, MW-M24, MW-M8, MW-M9, NA-0, NA-4, NA-7, PG-MW1, PG-MW5) in the remaining portion of the plume (Figure 8). MTBE concentrations exceeded the MCL for MTBE in 10 of the 23 wells evaluated in the upgradient portion of the plume. In addition, three bedrock wells were monitored during the November 2014 event and the concentration of MTBE did not exceed the MCL at any of them (similar to November 2013). Consistent with trends observed in the past, the concentrations in the upgradient wells continue to decrease. This trend is also illustrated in the time-series plot of MTBE concentration in Figure 7.

Parametric regression analysis is highly dependent on initial concentrations of the time-series data. In some cases, the determination that a monitoring well is unstable or increasing is attributable to a low initial MTBE concentration. Wells in the leading edge area are particularly susceptible to this situation. Because many of these wells were installed ahead of the MTBE plume, initial concentrations at leading edge area wells are low or non-detect and have increased as the MTBE plume migrated into this formerly un-impacted area. For instance, during this event, IT-GMP-19 and MW-M28 showed a

statistically significant increase even though the concentration of MTBE found at these wells was only 2.5 µg/L and 0.95 µg/L, respectively.

Note, IT-GMP-19, approximately 200 feet downgradient of IT-GMP-18, remains at a low concentration of 2.5 µg/L. Concentrations in MW-M28, IT-GMP-19 and IT-MW-81D remain below MCLs or non-detect; thus, the plume appears to be stable.

3.3 Plume Stability along the Extreme Leading Edge Area

In addition to evaluating the stability of MTBE concentration trends in individual wells within the entire plume, the stability of the MTBE plume was assessed within the leading edge area.

Historical sampling data indicate that MTBE was initially detected at centerline monitoring wells IT-GMP-15, IT-PZ-9, IT-GMP-17, and IT-GMP-18 in 1998, 1998, 2000, and 2004, respectively. Following the initial detection, MTBE concentrations in each well increased steadily over a period of four to six years (see Figure 7). Given the MTBE concentration trends and date of initial detection, significant MTBE detections would have been expected further downgradient in monitoring wells IT-GMP-19 and IT-MW-81S, and IT-MW-81D. However, no or minimal MTBE detections have been observed at these sentry wells:

- IT-GMP-19: Approximately 200 ft downgradient of IT-GMP-18, MTBE was detected at low levels (0.4 µg/L) upon initial sampling in early 2005. Since 2005, concentrations have slightly increased, but are consistently well below the California MCL at 13 µg/L.
- IT-MW-81S/D: Slightly further downgradient from IT-GMP-19, MTBE has not been detected at IT-MW-81S (sampled from 2001 through 2012) or IT-MW-81D (sampled from 2001 through 2014).

To the west of the plume centerline, MTBE data indicate similar plume stability. MTBE was initially detected at monitoring well MW-M13 in 2000, with concentrations steadily increasing to approximately 100 µg/L within six years. Similar concentrations are observed at the co-located deeper well, MW-M13D, since sampling commenced in 2005. Downgradient of MW-M13, MTBE was detected at low levels (0.4 µg/L) at monitoring well MW-M28 upon initial sampling in late 2005. Since 2005, concentrations at MW-M28 have never exceeded 1 µg/L.

Overall, these MTBE concentration trends over time indicate that MNA processes are most likely effectively controlling plume migration within the leading edge area. In each monitoring well, MTBE concentrations steadily increased from initial detection over a four- to six-year period. However, monitoring wells located further downgradient (i.e., IT-GMP-19, IT-MW-81S/D, and MW-M28) demonstrate no or minimul MTBE detections (i.e., below the California MCL) and where there are detections, there is no significant increase in concentration. Thus, the MTBE groundwater plume is demonstrating stable conditions.

In some instances, observed plume stability may be caused by maximum MTBE concentrations bypassing downgradient sentry wells due to improper vertical placement of the sentry well screens. However, within the leading edge area, the relatively uniform vertical distribution of MTBE concentrations (with maximum detections in the ~100s µg/L regardless of screened interval) indicates that the sentry wells (i.e., IT-GMP-19, IT-MW-81S/D, and MW-M28) are unlikely to be bypassed by the MTBE plume due to the vertical location of their screens (see Figure 9). IT-GMP-19 and MW-M28 are screened relatively shallow at 5.5 to 10.2 ft bgs and 7.5 to 17.5 ft bgs, respectively, and at depths similar to upgradient, MTBE-impacted monitoring wells IT-GMP-18 (6.0 to 10.5 ft bgs), IT-GMP-17 (5.0 to 10.5

ft bgs), and MW-M13 (5.0 to 15.0 ft bgs). IT-MW-81D is screened deeper at 22.42 to 32.42 ft bgs, and at depths similar to upgradient, MTBE-impacted monitoring wells LEA-MW1, LEA-MW2, LEA-MW3, LEA-MW4, and LEA-MW5 (ranging from 17 to 23 ft bgs). These MTBE concentrations in the leading edge area along with the well network both laterally and vertically indicate that the MTBE groundwater plume is likely not bypassing these sentry wells and that the plume is stable.

A groundwater flow and contaminant transport model was developed to predict when MTBE concentrations in groundwater will cease to exceed the California MCL. The model simulations predicted that maximum MTBE concentrations will decrease to the California MCL in approximately 2028 (Battelle, 2014b). Sensitivity simulations were also conducted to provide a highly conservative prediction of MTBE fate and transport. Complete documentation of the model is provided in the *Final Annual Site Status Report for the Year 2013* (Battelle, 2014b). As mentioned previously, a key feature in the development and calibration of the model is the observed stability of the MTBE plume along the "line of plume stability" (see Figures 6 and 7). As illustrated in Figures 6 and 7, MTBE concentrations in sentry wells (i.e., MW-M28 [0.95 µg/L], IT-GMP-19 [2.5 µg/L] and IT-MW-81D [non-detect]) downgradient of the "line of plume stability" remain non-detect or below the California MCL.

3.4 Mass Estimates

The estimated total mass of MTBE in groundwater has decreased significantly from May 2002 (142.2 kg) to November 2014 (15.9 kg). The estimated total mass of MTBE was 15.9 kg in November 2014 (Figure 10), more than double the mass found in November 2013. However, it is important to note that the total mass estimate observed in 2014 is relatively consistent as observed in November 2012 (16 kg), suggesting that there are currently no overall increases in mass estimate since the end of air sparging system operation. Additionally, there has been a 30% reduction in the total mass estimate since the last quarter of the air sparging system operation in November 2011.

MTBE mass estimates are compared using data from the annual (November) sampling events (with the exception of May 2002). During the annual event, the entire active monitoring well network is sampled, providing the most accurate and consistent mass estimates over time. Figure 10 shows the total MTBE mass and the percent of total mass present on and off former Navy property (bar graph) as well as the percent reduction on and off former Navy property (line graph). The relative amount of MTBE mass on former Navy property decreased dramatically and has represented 1 to 3% of the total dissolved MTBE mass since November 2007. MTBE mass has been reduced both on and off former Navy property, although reduction is occurring slower off of former Navy property.

As mentioned previously, concentrations of MTBE increased at several wells from the November 2013 event to the November 2014 event. The concentrations in most of these wells, however, were consistent with concentrations observed during November 2012 and July 2013. These fluctuations in concentrations led to the fluctuations in estimated MTBE mass between these events. The particularly low concentrations of MTBE in November 2013 could have led to the underestimation of the dissolved mass.

3.5 Geochemical Conditions

Geochemical indicators (i.e., DO, ORP, nitrate, sulfate, and ferrous [or dissolved] iron) of MNA and MTBE degradation products (TBA and TBF) have been evaluated to assess biodegradation. During the November 2014 sampling event, geochemical parameters and MTBE degradation products were collected from centerline and leading edge area monitoring wells as detailed in the updated monitoring program provided in the *Final Groundwater Monitoring Plan for Former UST Site 957/970 at Department of Defense Housing Facility, Novato, California* (Battelle, 2013a). The analytical results for

the geochemical parameters and degradation products from the November 2014 sampling event are provided in Appendices D and E.

The occurrence of biodegradation was characterized by comparing the concentration of MTBE to analytical results for nitrate, sulfate, ferrous iron, and TBA and field measurements of DO and ORP along the MTBE plume centerline. Figure 11 shows the geochemical parameters, MTBE degradation products, and MTBE concentrations along the plume centerline. Based on the evaluation presented in Figure 11, the following conclusions regarding MNA have been made.

Sulfate and Nitrate – Sulfate and nitrate are terminal electron acceptors and are expected to be present at lower concentrations in impacted areas than in non-impacted areas. The concentration of nitrate is low (<0.125 mg/L) throughout most of the plume, except at PG-MW1(6.7 mg/L), which is in the area of the former biosparging treatment system. This was also observed during the 2011, 2012, and 2013 sampling events (Battelle, 2013a).

The concentration of sulfate decreases from sentry well NA-0 (96 mg/L) (with no detected MTBE) to monitoring wells within the former UST 970 source area, MW-1A (5.2mg/L) and MW-4A (1.4 mg/L) where the concentration of MTBE exceeded the California MCL. This trend is consistent with the expected behavior of sulfate in affected areas. Downgradient from these wells, however, the concentration of sulfate is generally increasing along the plume centerline. Sulfate concentrations, while lower than those found in NA-0, do not appear to decrease in the affected wells, PG-MW1 and MW-M23, when compared to the wells with lower MTBE concentrations directly upgradient from them. In contrast, the concentration of sulfate at IT-GMP-18 does decrease when compared to less affected wells surrounding it, indicating biodegradation, possibly enhanced due to the operation of the former air sparging treatment system.

The low sulfate (1.4 mg/L to 5.2 mg/L), specifically within areas where concentrations have been continually decreasing (e.g., the 970 source area), suggest that biodegradation is occurring (see Figure 11). This conclusion is strengthened by the high sulfate concentration found at sentry well NA-0 (96 mg/L), which has not had detectable amounts of MTBE.

Ferrous Iron – Ferrous (or dissolved) iron is a metabolic byproduct of petroleum hydrocarbon biodegradation. As such, ferrous iron is often present in high concentrations in impacted areas undergoing anaerobic biodegradation compared to non-impacted areas. Dissolved iron concentrations are relatively high (10 mg/L to 35 mg/L) in the 970 source area, where MTBE concentrations have decreased dramatically (to levels less than those in the leading edge area). Persistent elevated dissolved iron concentrations suggest that biodegradation is occurring in this area. On the other hand, ferrous iron is not present in high concentrations in the leading edge area compared to the upgradient area, even though the leading edge area wells have demonstrated a 83% decrease in the mass of MTBE over the past 12 years. This may be attributable to greater reaction rates spurred by the presence of BTEX and historically higher MTBE concentrations found in the wells on former Navy property (Appendix E).

TBA – TBA is a degradation product of MTBE and, in some cases, can demonstrate that biodegradation of MTBE is occurring. As in previous events, significant concentrations of TBA were present in the vicinity of the former 970 source area (Figure 10). This trend corroborates the findings of other geochemical indicators such as the dissolved iron results in the 970 source area wells discussed earlier.

TBA analytical results have been collected from select monitoring wells at the site since January 1999. The maximum detected TBA concentration over this time was 2,500 µg/L found at PG-MW1 in May 2005 (during the one-year temporary shutdown period of the biosparging system). Since then, TBA concentrations in PG-MW1 have continued to decrease. TBA concentration in PG-MW1

during the November 2014 sampling event was 12 µg/L. A maximum TBA concentration of 290 µg/L was observed at MW-4A. TBA was also observed at wells LEA-MW2 (25 µg/L), LEA-MW3 (110 µg/L), LEA-MW4 (91 µg/L) and LEA-MW5 (67 µg/L). This demonstrates the presence of MTBE biodegradation in the leading edge area.

TBF – TBF is a degradation product of MTBE. It was not detected in any monitoring wells during the November 2014 sampling event. Therefore, the TBF analytical results were not included in the geochemical evaluation presented in Figure 11.

DO – Similar to sulfate and nitrate, DO is a terminal electron acceptor that is expected to be present in lower concentrations in impacted areas compared to non-impacted areas. As indicated in Figure 11, DO levels are variable through the plume centerline, ranging from 0.7 to 2.3 mg/L, but show elevated levels in the leading edge area, most likely attributable to the former air sparge system. Due to the challenges associated with collecting reliable DO data in the field, it is difficult to make conclusions regarding whether DO results support the occurrence of MTBE biodegradation in the subsurface.

ORP – ORP values vary throughout the plume, but appear to show some discernible trends. Specifically, ORP values in the former 970 source area indicate reducing conditions (e.g., the ORP values of MW-1A and 970-MW4 are -114.9 and -97.0, respectively), which then transition to oxidizing conditions within the former biosparging treatment area. Subsurface conditions remain oxidizing from 957-MW4 to IT-GMP-19 (except for reducing conditions at MW-M20D) throughout the leading edge area. The ORP trends observed are as expected with reducing conditions occurring in the former 970 source area and oxidizing conditions occurring within and/or downgradient of areas that were recently treated by the biosparging system and air sparge system in the leading edge area.

Geochemical indicators of MNA appear to support the assumption that biodegradation is occurring in certain areas of the site (for instance, the low sulfate concentrations in the former 970 source area [where clean groundwater enters the impacted area] and at IT-GMP-18 in the leading edge area [close to the former leading edge area air sparge treatment system]). As is demonstrated by oxidizing conditions, the former biosparging treatment system and the former leading edge area air sparge treatment system have augmented natural attenuation in the subsurface conditions in their respective areas. In general, the geochemical evaluation presented above, in addition to the statistical evaluation of plume stability and the time-series mass estimates, support the conclusion that MNA is occurring.

3.6 MTBE Plume Discussion

Leading Edge Area. Prior to the installation and operation of the air sparging system in the leading edge area, the maximum MTBE concentration detected off former Navy property was historically found at monitoring well MW-M14D (located to the west of Landfill 26). The highest concentration found at this well was 980 µg/L, which was detected in August 2006. During the November 2014 sampling event, the maximum MTBE concentration detected north of former Navy property was 410 µg/L, which was found at LEA-MW5 (west of the former air sparge treatment area). Though this is an increase from November 2013 (67µg/L), the current result is consistent with the concentration observed during July 2013 (400 µg/L) and November 2012 (420 µg/L). In addition, results from statistical analysis indicate that LEA-MW5 is exhibiting a statistically significant decreasing trend.

Concentrations of MTBE at several wells in the footprint of the former leading edge area air sparging treatment system increased from November 2013 to November 2014. During the November 2013 sampling event, MTBE concentrations at MW-M14D, LEA-MW2, LEA-MW3, LEA-MW4 were all non-detect. In November 2014, concentrations found at LEA-MW2 (55 µg/L), LEA-MW3 (290 µg/L)

and LEA-MW4 (270 µg/L) increased, while concentrations at MW-M14D remain non-detect (Figure 6). However as mentioned previously and illustrated in Figure 7, the current concentrations observed at these wells are consistent with concentrations observed during July 2013 and November 2012 with the exception of LEA-MW2 (which demonstrated a statistically insignificant increase based on November 2014 data). In addition, the results for the number of monitoring wells (seven) in the leading edge exhibiting statistically significant increases have remained stable when comparing the 2013 and 2014 datasets. Furthermore, most of these wells were in the direct area of influence of the leading edge air sparging system so MTBE concentrations from upgradient locations are likely moving into the former treatment area and appearing as increases in individual well locations when in reality concentrations are still well below levels observed before air sparging occurred.

Consistent with past observations, MTBE was not detected in any monitoring wells within Landfill 26, thus bounding the plume on its northeastern edge. The total mass estimate observed in 2014 (15.7 kg) remains the same as observed in November 2012 (16 kg), suggesting that there are no overall increases in mass estimate since the end of air sparging system operation (see Section 3.4).

Upgradient Area. As observed in the past monitoring events, the upgradient wells continue to show a decreasing trend. Upgradient monitoring wells 970-MW1, 970-MW3, MW-M18, MW-M24, MW-M2-BR, NA-0, and NA-4 were non-detect during November 2014 (Figure 6 and Appendix D). Concentration of MTBE found at MW-M23 (84 µg/L) was the highest found in the upgradient area. All monitoring wells in the upgradient area of the plume exhibited a statistically significant decreasing trend with the only exception being MW-M15, which demonstrated a statistically insignificant decreasing trend. Figure 7 shows that the peak concentrations at this well have occurred in 2002, 2003 and 2005. In the last six years, the concentrations have ranged from non-detect (2009) to 27 µg/L (November 2012).

The smaller southern plume (among the upgradient wells) is centered on well MW-4A. MW-4A and MW-1A are the only monitoring wells in this smaller southern plume that exceeded the California MTBE MCL in November 2014. This portion is centered on Building 970 and is confined to an area directly beneath the fenced in portion of the property around the building. MTBE concentration at MW-4A is the maximum concentration found in this southern plume (60 µg/L). The concentration of MTBE at the southernmost well (NA-0), directly upgradient from the plume, remains non-detect. Overall, as shown in Figure 7, the concentrations in the upgradient wells are consistent with past monitoring events and are continuing to decrease. This is further supported by the results from the statistical analysis summarized in Figure 8.

Section 4.0: CONCLUSIONS AND RECOMMENDATIONS

This section presents conclusions based on the analytical results collected during the November 2014 groundwater monitoring activities, and provides recommendations based on the evaluation of the data to more effectively address the DQOs presented in the Draft SAP (Battelle, 2014a).

4.1 Conclusions

Soil gas. Analytical results from the 2014 soil gas sampling event (Round 8) indicated that vinyl chloride was the only COC detected at concentrations greater than RBSL of 20.7 μg/m^3. Vinyl chloride was detected at two locations (three depths): CSG-1A6(2.9) and (CSG-1A6(6.0) and CSG-1A7(3.5) located north-northeast of former Building 965. Helium results indicated that small leaks may have been present during the sampling, however, because the helium tracer compound did not exceed the maximum criteria of 5% (CalEPA, 2012a), the data were determined to be acceptable.

Groundwater. The extent and concentrations of MTBE making up the groundwater plume in November 2014 are consistent with past sampling events. There were some increases observed in wells within the former leading edge air sparging system when comparing data from 2013 to 2014, but the concentrations in most of these wells are similar to those observed in 2012 and it is expected that some MTBE located upgradient of the former treatment area would move downgradient, causing increases in MTBE to be observed in those wells. The line of plume stability identified at the leading edge of the plume is still valid as shown in Figure 7 and discussed in Section 3.3 as concentrations in the sentry wells downgradient of the line remain below MCLs or non-detect. The furthest extent of MTBE-impacted groundwater downgradient from the 957/970 source area was detected in monitoring well IT-GMP-19 at 2.5 μg/L. Consistent with past observations, MTBE was not detected in any monitoring wells within Landfill 26 (i.e., IT-MW-81D and MW-86D/S), thus bounding the plume on its northeastern edge.

The concentrations in the upgradient wells are consistent with the past monitoring events and are continuing to decrease steadily over time. This is further supported by the results from the statistical analysis presented in Figure 8, which show that the decreasing concentration trend in wells in the upgradient portion of the plume continues.

Overall, the potentiometric surface, including groundwater flow direction and hydraulic gradient for November 2014, are consistent with historical potentiometric maps for the site, demonstrating that groundwater flow is toward the north and northeast across Landfill 26 with a decreasing hydraulic gradient (Figure 3). In the leading edge area of the MTBE plume, the hydraulic gradient is relatively flat in the area of Landfill 26. The portion of the aquifer underneath Landfill 26 has a greater water-bearing capacity than upgradient portions of the aquifer. This larger water-bearing capacity underneath Landfill 26 may help control the plume and stabilize and/or reduce MTBE concentrations more effectively than conditions upgradient of Landfill 26, therefore confirming and supporting the most up-to-date CSM. Additionally, the landfill monitoring network is within the estimated flow path of the MTBE plume and is sufficient to ensure that the leading edge area of the plume continues to be fully delineated (Figure 6).

A key feature in the development and calibration of the groundwater flow and contaminant transport model is the observed stability of the MTBE plume. This “line of plume stability” continues to be valid for the conditions within the leading edge area. MNA continues to be the most appropriate remedy at the site based on the groundwater and geochemical data at the site. To evaluate the occurrence

of MNA, data indicating (1) plume stabilization; (2) contaminant mass reduction over time; and (3) geochemical conditions suitable for biodegradation processes were evaluated through the MTBE plume.

(1) To evaluate plume stability, parametric regression analyses were conducted to quantify MTBE concentration trends at each monitoring well using MTBE data collected through November 2014 (see Figure 8). As with past sampling events, there is a considerable difference between the MTBE concentration trends in the leading edge area compared to the upgradient area. The concentrations in the upgradient wells continue to exhibit steadily decreasing trends. In the leading edge area, 30% of the monitoring wells (seven of 23) demonstrate a statistically significant increasing trend, while in the upgradient area, no monitoring wells have an increasing trend. The results for a number of monitoring wells exhibiting statistically significant increases in the leading edge area remain similar when comparing 2013 and 2014 datasets. In the leading edge, 65% (15 of 23) of the monitoring wells in the leading edge area have shown a statistically significant decreasing trend or non-detect concentrations, as compared to 96% (25 of 26) of the monitoring wells in the upgradient area.

(2) The estimated total mass of MTBE in groundwater in November 2014 (15.9 kg) represents a 83% decrease from the mass calculated in May 2002 (142.2 kg), prior to initiation of the former biosparging treatment system that was operated in the upgradient portion of the plume. The estimated total mass of MTBE has increased from 7 kg in November 2013 to 15.9 kg in November 2014. However, it is important to note that the total mass estimate observed in 2014 remains the same as observed in November 2012 (16 kg), suggesting that there are currently no overall increases in mass estimate since the end of air sparging system operation in the leading edge portion of the plume. The relative proportion of MTBE mass on former Navy property compared to the mass of MTBE off of Navy property has decreased dramatically and now represents 3% of the total dissolved MTBE mass (Figure 10).

(3) Geochemical indicators of MNA support the conclusion that biodegradation is occurring in certain areas of the site, most notably in the former 970 source area where non-impacted groundwater migrates into the plume. The presence of TBA in MW-4A, LEA-MW2, LEA-MW3, LEA-MW4 and LEA-MW5 suggest that biodegradation is occurring. In general, the geochemical evaluation presented in Figure 11 supports the conclusion that MNA is occurring in the subsurface.

4.2 Recommendations

The significant recommended modifications to the site monitoring program are as follows:

(1) ***Soil Gas Exit Strategy***: An exit strategy for soil gas sampling should take into account current land use controls, the RAO of the NTCRA associated with source removal at the Building 965 Area, and include comparison of soil gas concentrations to up-to-date RBSLs. The RAO for soil gas at the Parcel 1A site was to reduce and/or manage human health risk to acceptable levels (ERRG, 2011). Updated soil gas RBSLs were provided in the Draft Sampling and Analysis Plan (Battelle, 2014a) using the current DTSC J&E model (version 3.0; last modified March 2014) and are included in Table 1. Based on analytical results of COCs from eight rounds of soil gas sampling over a five-year period, the updates to the RBSLs, coupled with the land use controls established in the Building 965 Area (Section 1.3), the Navy believes that the RAO for soil gas sampling has been met by reducing and managing human health risk to acceptable levels. Therefore, it is recommended that no additional soil gas sampling be conducted.

(2) ***Groundwater Monitoring:*** The Navy recommended MNA as the remedy with a transition from semi-annual to annual sampling events starting in 2014. Annual sampling provides adequate data to track MTBE concentrations over time and ensure concentrations are stable to decreasing. While some concentrations have increased in the leading edge area, the MTBE plume is stable at the leading edge as shown by low or non-detect concentrations in sentry wells (MW-M28, IT-MW-19 and IT-MW-81D) and the line of stability plume identified during previous groundwater modeling efforts.

The plume has demonstrated stagnation in the leading edge area due to one or more natural attenuation mechanisms as well as the operation of the air sparging treatment system. Because plume stagnation was occurring prior to the implementation of air sparging, a natural attenuation mechanism causing the plume to stabilize the leading edge area is the likely explanation. Without a natural attenuation mechanism, sentry wells outside of the current extent of the MTBE plume should have had significant detected concentrations of MTBE. Possible mechanisms that might cause the plume to stabilize in this location include a shallower hydraulic gradient (Figures 3), increased attenuation due to the geochemical changes caused by the landfill or some other mechanism, and/or the input of DO due to precipitation pooling in the low point of the leading edge area as rain runs off of the landfill cap and Ammo Hill.

Overall, MNA continues to progress at the site based on the data observed from plume stabilization, contaminant mass reduction, and the geochemical data. Based on the information presented in this Annual Site Status Report, the Navy will develop a report recommending site closure based on the requirements established in the Water Board Low-Threat UST Case Closure Policy Document (2012b). The Navy will submit this report to the Water Board and any comments, recommendations, or data gap requests from the Water Board (based on this closure report) will be addressed during the November 2015 sampling event.

It is important to note that although the Water Board has not formally acknowledged that groundwater at the site meets Resolution 88-63 criteria for a municipal beneficial use exemption (Water Board, 1988), impacted groundwater beneath the site is arguably not a potential drinking water source because the water in the shallow aquifer underneath and downgradient of the site has a high total dissolved solids concentration and low yield. No domestic, irrigation, or agricultural wells are currently impacted by the dissolved-phase gasoline constituents released from the site. A public water supply is readily available and, therefore, nuisance as defined by Water Code Section 13050 does not exist at the site. In addition, a Covenant to Restrict Use of Property is in place for Parcel 1A limiting indoor air exposure, prohibiting activities involving interaction with the groundwater beneath the site, and disturbance of the soil unless it is removed and disposed of following all applicable laws and regulations.

Soil Vapor Sample Collection Log

Project Number: _____
Date: 11/13/14
Client Name: Battelle
Location: UST Site 450/972
Sampler(s): BW
Sample Location ID: CSG-1A-1

Weather: Overcast
Barometric Pressure: 29.93
Ambient Temperature: 62°F
Arrival Time: 1045
Departure Time: 1155
Sampler Signature: [signature]

Sample ID	CSG-1A-1 (6.5)	CSG-1A-1 (3.5)		
Sample Probe Depth (ft)	6.5	3.5		
Length of tubing (ft)	8.5	5.5		
Inside Diameter of Tubing (in)	1/8	1/8		
Analysis Method	TO-15	TO-15		
Number of Volumes to Purge*	10	10		
Total Purge Volume (ml)**	204.85	132.55		
Purge Time (mins)***	1.5	1		
Canister Size (L)	1L	1L		
Flow Rate (ml/min)	167	167		
Canister Number	37740	34591		
File Number	100210	20358		
Initial Sample Canister Vacuum (in Hg)	29	29		
Manifold Leak Test Pass (Y/N)	Y	Y		
Shroud Helium Concentration (%)	38%	37%		
Leak Check Helium Concentration (%)	0%	0%		
Sample Collection Start Time	1100	1132		
Vacuum Reading for Gas Probe (in Hg)	29	29		
Sample Collection Stop Time	1110	1141		
Final Sample Canister Vacuum (in Hg)	5	5		
Duplicate or QC sample (Y/N)	N	N		

*Number of probe volumes to purge will be previously determined for each soil type during the purge step test.
**Multiply tubing length by conversion of constant (ml/ft) and number of probe volumes to purge.
***Divide total purge volume by the flow rate

Conversion Constant (ml/ft) for 1/8 inch inside diameter tubing (standard for soil gas probes) = 2.41 (ml/ft).

Duplicate or QC sample (Y/N)	N	Y	Y	

*Number of probe volumes to purge will be previously determined for each soil type during the purge step test.
**Multiply tubing length by conversion of constant (ml/ft) and number of probe volumes to purge.
***Divide total purge volume by the flow rate

Conversion Constant (ml/ft) for 1/8 inch inside diameter tubing (standard for soil gas probes) = 2.41 (ml/ft).

APPENDIX D

LABORATORY ANALYTICAL REPORTS

(NOVEMBER 2014)

eurofins | Air Toxics

12/5/2014
Mr. Travis Williamson
Battelle Memorial Institute
505 King Avenue

Columbus OH 43201

Project Name: UST SITE 957/970
Project #:
Workorder #: 1411348A

Dear Mr. Travis Williamson

The following report includes the data for the above referenced project for sample(s) received on 11/18/2014 at Air Toxics Ltd.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kyle Vagadori at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kyle Vagadori

Project Manager

eurofins | Air Toxics

LABORATORY NARRATIVE
EPA Method TO-15
Battelle Memorial Institute
Workorder# 1411348A

Twenty-four 1 Liter Summa Canister samples were received on November 18, 2014. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified (0.2 ppbv for compounds reported at 0.5 ppbv and 0.8 ppbv for compounds reported at 2.0 ppbv) may be false positives.

Dilution was performed on sample CSG-1A-6 (2.9) due to the presence of high level target species.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

12/4/2014
Mr. Travis Williamson
Battelle Memorial Institute
505 King Avenue

Columbus OH 43201

Project Name: UST SITE 957/970
Project #:
Workorder #: 1411348B

Dear Mr. Travis Williamson

The following report includes the data for the above referenced project for sample(s) received on 11/18/2014 at Air Toxics Ltd.

The data and associated QC analyzed by Modified ASTM D-1946 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kyle Vagadori at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kyle Vagadori

Project Manager

LABORATORY NARRATIVE
Modified ASTM D-1946
Battelle Memorial Institute
Workorder# 1411348B

Twenty-four 1 Liter Summa Canister samples were received on November 18, 2014. The laboratory performed analysis via Modified ASTM Method D-1946 for Helium in air using GC/TCD. The method involves direct injection of 1.0 mL of sample.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

Requirement	***ASTM D-1946***	***ATL Modifications***
Calibration	A single point calibration is performed using a reference standard closely matching the composition of the unknown.	A minimum of 5-point calibration curve is performed. Quantitation is based on average Response Factor.
Reference Standard	The composition of any reference standard must be known to within 0.01 mol % for any component.	The standards used by ATL are blended to a >/= 95% accuracy.
Sample Injection Volume	Components whose concentrations are in excess of 5 % should not be analyzed by using sample volumes greater than 0.5 mL.	The sample container is connected directly to a fixed volume sample loop of 1.0 mL on the GC. Linear range is defined by the calibration curve. Bags are loaded by vacuum.
Normalization	Normalize the mole percent values by multiplying each value by 100 and dividing by the sum of the original values. The sum of the original values should not differ from 100% by more than 1.0%.	Results are not normalized. The sum of the reported values can differ from 100% by as much as 15%, either due to analytical variability or an unusual sample matrix.
Precision	Precision requirements established at each concentration level.	Duplicates should agree within 25% RPD for detections > 5 X's the RL.

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per project specific client request the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit.

Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
B - Compound present in laboratory blank greater than reporting limit.
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the detection limit.
M - Reported value may be biased due to apparent matrix interferences.
File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Manually Integrated Analytes

Alpha's Sample ID	Test Reference	Analyte
NONE		

Enclosed please find the analytical results of the samples received by Alpha Analytical, Inc. under the above mentioned Work Order/Chain-of-Custody.

Alpha Analytical, Inc. has a formal Quality Assurance/Quality Control program, which is designed to meet or exceed the EPA requirements. All relevant QC met quality assurance objectives for this project unless otherwise stated in the footnotes.

If you have any questions with regards to this report, please contact Randy Gardner, Project Manager, at (800) 283-1183.

Note : The final report format has been altered from the DOD QSM to meet client instructions.

Data flags are DOD specified with criteria that may differ from EPA or inhouse statistical criteria.

Information regarding the estimate of the uncertainty of measurement is available upon client request.

Q = One or more quality control criteria failed.

T = Tertiary butyl formate (TBF) is unstable in samples and standards. Measured concentrations and reporting limits should be considered estimates.

ND = Not Detected

Information regarding the estimate of the uncertainty of measurement is available upon client request.

T = Tertiary butyl formate (TBF) is unstable in samples and standards. Measured concentrations and reporting limits should be considered estimates.

Comments:

Calculations are based off of raw (non-rounded) data. However, for reporting purposes, all QC data is rounded to three significant figures. Therefore, hand calculated values may differ slightly.

Alpha uses descriptive data qualifier flags, which could be replaced with either a DOD Q or J flag.

L51 = Analyte recovery was above acceptance limits for the LCS, but was acceptable in the MS/MSD.

Manually Integrated Analytes

Alpha's Sample ID	Test Reference	Analyte
NONE		

Enclosed please find the analytical results of the samples received by Alpha Analytical, Inc. under the above mentioned Work Order/Chain-of-Custody.

Alpha Analytical, Inc. has a formal Quality Assurance/Quality Control program, which is designed to meet or exceed the EPA requirements. All relevant QC met quality assurance objectives for this project unless otherwise stated in the footnotes.

If you have any questions with regards to this report, please contact Randy Gardner, Project Manager, at (800) 283-1183.

Note : The final report format has been altered from the DOD QSM to meet client instructions.

Data flags are DOD specified with criteria that may differ from EPA or inhouse statistical criteria.

Information regarding the estimate of the uncertainty of measurement is available upon client request.

Q = One or more quality control criteria failed.

T = Tertiary butyl formate (TBF) is unstable in samples and standards. Measured concentrations and reporting limits should be considered estimates.

ND = Not Detected

QC Summary Report

Work Order: 14111401

Comments:

Calculations are based off of raw (non-rounded) data. However, for reporting purposes, all QC data is rounded to three significant figures. Therefore, hand calculated values may differ slightly.

Manually Integrated Analytes

Alpha's Sample ID	Test Reference	Analyte
NONE		

Enclosed please find the analytical results of the samples received by Alpha Analytical, Inc. under the above mentioned Work Order/Chain-of-Custody.

Alpha Analytical, Inc. has a formal Quality Assurance/Quality Control program, which is designed to meet or exceed the EPA requirements. All relevant QC met quality assurance objectives for this project unless otherwise stated in the footnotes.

If you have any questions with regards to this report, please contact Randy Gardner, Project Manager, at (800) 283-1183.

Note : The final report format has been altered from the DOD QSM to meet client instructions.
